TÜV America, Inc. TCB 10040 Mesa Rim Road San Diego, CA 92121

Dear Sir or Madam:

We, Directed Electronics Incorporated, hereby authorize TÜV Product Service (10040 Mesa Rim Road, San Diego, CA 92121, Tel. (619) 546-3999) to act as our agent in all matters relating to applications for equipment authorization, including the signing of all documents relating to these matters. I further certify that the applicant nor any party to the application is subject to a denial of Federal benefits, that includes FCC benefits, pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. Section 862.

This authorization expires on 04/27/06.

Sincerely,

Mark Rutledge Vice President of Engineering

Re: Request of Confidentiality

Pursuant to Sections 0.457(d)(1)(ii) and 0.459 of the Commission's Rules, the Applicant hereby requests confidential treatment of information accompanying as outlined below:

Schematics and operating description for EZSDEI489.

The above materials contain trade secrets and proprietary information not customarily released to the public. The public disclosure of these matters might be harmful to the Applicant and provide unjustified benefits to its competitors.

The Applicant understands that pursuant to Rule 0.457(d)(1)(ii), disclosure of this Application and all accompanying documentation will not be made before the date of the Grant for this Application.

Sincerely,

Mark Rutledge Vice President of Engineering

RE: FCC ID EZSDEI489

Dear Sir or Madam,

This letter is to address the following for the 489VPX transceivers:

- 1. Learn routine for replacement transmitters
- 2. System transmission frequency range
- 3. Data transmission duty cycle description
- 4. Manuals
- 1. Refer to instructions in attached blister pack info card PDF.
- This transmitter is a single frequency device. It has a crystal controlled PLL which generates the RF carrier. The crystal based oscillator can maintain a center frequency of 433.92MHz within a +/-35KHz tolerance. The receiver operated by this transmitter is a single band receiver tuned to 433.92MHz and only capable of receiving this frequency.
- 3. The 489VPX is a data transmission device. Its protocol consists of 12 preamble bits (400us each) and 66 data bits (400us or 800us each, they are random) for a total of 78 bits. So the calculation for the duty cycle becomes:

## (12 x 400us)+(66x800us)= 57.60ms within a 100ms period

The worst case scenario calculation is assured by the fact that we used 800us for all 66 data bits as they can be either 400us or 800us.

4. Refer to instructions in attached blister pack info card PDF.

Sincerely,

Minas Minassian RF Engineer
