**1.0 GENERAL INFORMATION**

**1.1 Product Description**

**General Equipment Description -- NOTE: This information will be input into your test report as shown below.**

EUT Description: 2 way in-vehicle transceiver for automotive security and remote start systems.

EUT Name: 554 IVU

Model No.: 546 Serial No.: --

Product Options: --

Configurations to be tested: --

**Power Requirements**

*Regulations require testing to be performed at typical power ratings in the countries of intended use. (i.e., European power is typically 230 VAC 50 Hz or 400 VAC 50 Hz, single and three phase, respectively)*

Voltage: 5V (If battery powered, make sure battery life is sufficient to complete testing.)

# of Phases: --

Current (Amps/phase(max)): -- Current (Amps/phase(nominal)): --

Other: --

**Other Special Requirements**

--

**Typical Installation and/or Operating Environment**

(ie. Hospital, Small Business, Industrial/Factory, etc.)

Automotive

**EUT Power Cable**

Permanent OR  Removable Length (in meters): 3m

Shielded OR  Unshielded

Not Applicable

EUT Interface Ports and Cables												
Interface				Shielding								
Type	Analog	Digital	Qty	Yes	No	Type	Termination	Connector Type	Port Termination	Length (in meters)	Removable	Permanent
<b>EXAMPLE:</b> RS232	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Foil over braid	Coaxial	Metallized 9-pin D-Sub	Characteristic Impedance	6	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**EUT Software.**

Revision Level: --

Description: --

**EUT Operating Modes to be Tested** -- list the operating modes to be used during test. It is recommended the equipment be tested while operating in a typical operation mode. FCC testing of personal computers and/or peripherals requires that a simple program generate a complete line of upper case H's. Provide a general description of all software, firmware, and PLD algorithms used in the equipment. List all code modules as described above, with the revision level used during testing. Consult with your TÜV Product Service Representative if additional assistance is required.

1. CW transmission.

**EUT System Components** -- List and describe all components which are part of the EUT. For FCC testing a minimum configuration is required. (ie. Mouse, Printer, Monitor, External Disk Drive, Motherboard, etc.)

Description	Model #	Serial #	FCC ID #
Alarm main module and associated harnesses	554V	--	--

**Support Equipment** -- List and describe all support equipment which is not part of the EUT. (i.e. peripherals, simulators, etc)

Description	Model #	Serial #	FCC ID #
-------------	---------	----------	----------

--

**Oscillator Frequencies**

Frequency	Derived Frequency	Component # / Location	Description of Use
433.92 MHz	--	--	RF Carrier frequency

**Power Supply**

Manufacturer	Model #	Serial #	Type
--			<input type="checkbox"/> Switched-mode: (Frequency) _____ <input type="checkbox"/> Linear <input type="checkbox"/> Other:

**Power Line Filters**

Manufacturer	Model #	Location in EUT
--		

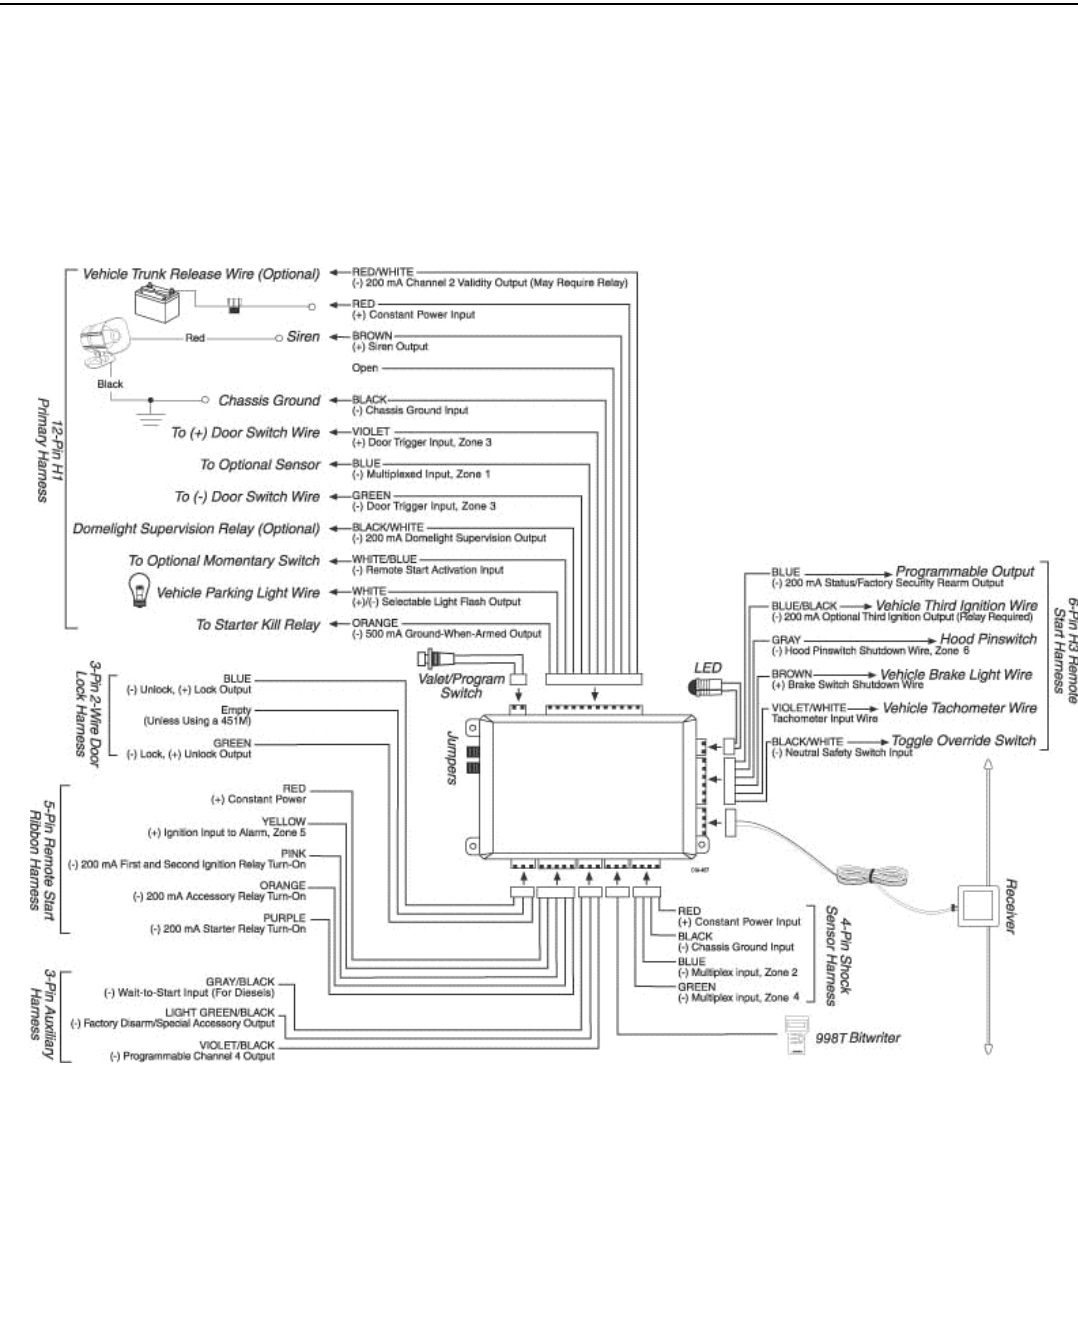

**Critical EMI Components (Capacitors, ferrites, etc.)**

Description	Manufacturer	Part # or Value	Qty	Component # / Location
--				

**EMC Critical Detail -- Describe other EMC Design details used to reduce high frequency noise.**

--

**System Configuration Block Diagram** -- Provide a line drawing identifying the EUT, simulators, support equipment, I/O cables, power cables, and any other pertinent components to be used during testing. Use a dashed line to separate the equipment in the testing field versus equipment outside testing field.

**1.2 Related Submittal Grant**

None

**1.3 Tested System Details**

The FCC ID's for all equipment, plus descriptions of all cables used in the tested system are:

None

**1.4 Test Methodology**

Purpose of Test: To demonstrate compliance with the following tests.

TEST	FCC CFR 47#	PASS/FAIL
Deactivation	15.231(a)	Pass
Radiated Spurious Emissions	15.231(b)	Pass
Emissions Bandwidth	15.231(c)	Pass
Duty Cycle Measurements	ANSI C63.4, Appendix 14, Para. 10	Pass

Both Conducted and Radiated testing were performed according to the procedures in FCC/ANSI C63.4 and CSA 108.8-M1983. Radiated testing was performed at an antenna-to-EUT distance of 3 meters (1 - 25 GHz).

**1.5 Test Facility**

The open area test site and conducted measurement data were tested by:

TÜV AMERICA, INC  
 10040 Mesa Rim Road  
 San Diego, CA 92121-2912  
 Phone: 858 546 3999  
 Fax: 858 546 0364

The Test Site Data and performance comply with ANSI C63.4 and are registered with the FCC, 7435 Oakland Mills Road, Columbia Maryland 21046. All Measurement Data is acquired according to the content of FCC Measurement Procedure and ANSI C63.4, unless supplemented with additional requirements as noted in the test report.

## **2.0 SYSTEM TEST CONFIGURATION**

### **2.1 Justification**

The EUT was initially tested for FCC emissions in the following configuration:

See Block Diagram

### **2.2 EUT Exercise Software**

None

### **2.3 Special Accessories**

None

### **2.4 Equipment Modifications**

None

### **2.5 Configuration of Test System**

See Block Diagram

**3.0 DEACTIVATION EQUIPMENT/DATA**

**RADIATED SPURIOUS EMISSIONS EQUIPMENT/DATA**

The following data lists the significant emission frequencies, measured levels, correction factor (which includes cable and antenna corrections), the corrected reading, and the limit.

**EMISSIONS BANDWIDTH EQUIPMENT/DATA**

**DUTY CYCLE MEASUREMENTS EQUIPMENT/DATA**

See following page(s).

### 3.1 Field Strength Calculation

If a preamplifier was used during the Radiated Emission Testing, it is required that the amplifier gain must be subtracted from the Spectrum Analyzer (Meter) Reading. In addition, a correction factor for the antenna, cable used and a distance factor, if any, must be applied to the Meter Reading before a true field strength reading can be obtained. In the automatic measurement, these considerations are automatically presented as a part of the print out. In the case of manual measurements and for greater efficiency and convenience, instead of using these correlation factors for each meter reading, the specification limit was modified to reflect these correlation factors at each frequency value so that the meter readings can be compared directly to the modified specification limit. This modified specification limit is referred to as the "Corrected Meter Reading Limit" or simply the CMRL, which is the actual field strength present at the antenna. The quantity can be derived in the following manner:

$$\text{Corrected Meter Reading Limit (CMRL)} = \text{SAR} + \text{AF} + \text{CL} - \text{AG} - \text{DC}$$

Where, SAR = Spectrum Analyzer Reading

AF = Antenna Factor

CL = Cable Loss

AG = Amplifier Gain (if any)

DC = Distance Correction (if any)

Assume the following situation: A meter reading of 29.4 dBuV was obtained from a Class A computing device measured at 83 MHz. Assume an antenna factor of 9.2 dB, a cable loss of 1.4 dB and amplifier gain of 20.0 dB at 83 MHz. The final field strength would be determined as follows:

$$\text{CMRL} = 29.4 \text{ dBuV} + 9.2 \text{ dB} - 1.4 \text{ dB} - 20 \text{ dB/M} - 0.0 \text{ dB}$$

$$\text{CMRL} = 20.0 \text{ dBuV/M}$$

This result is well below the FCC and CSA Class A limit of 29.5 dbuV/m at 83 MHz.

For the manual mode of measurement, a table of corrected meter reading limit was used to permit immediate comparison of the meter reading to determine if the measure emission amplitude exceeded the specification limit at that specific frequency.

Report No. SC204450

Duty Cycle  $\frac{8.8}{100} \leq 10\%$

**Pulse Duty Cycle Correction Factor: FCC 15.35(e) and ANSI C63.4:2000 Appendix I.4.**

Calculation:

$$\text{Average Reading} = \text{Peak Reading (dBuV/m)} + 20\log(\text{duty cycle})$$

Where duty cycle correction is allowed, the following methods are employed to determine the correction factored allowed:

- 1) Turn on the transmitter and set it to transmit the pulse train continuously.
- 2) Tune the spectrum analyzer to the transmitter frequency and set the spectrum analyzer resolution bandwidth wide enough to encompass all significant components of the signal of interest. Video bandwidth is set to the widest bandwidth available.
- 3) Set the spectrum analyzer vertical scale to the linear mode and the frequency span to zero hertz moving if necessary the antenna closer to the device to obtain a convenient signal level.
- 4) Connect a storage scope to the video output of the spectrum analyzer. This will be used to demodulate and detect the pulse train.
- 5) Adjust the oscilloscope settings to observe the pulse train, and determine the number and width of the pulses, as well as the of the period.
- 6) Adjust the transmitter controls, jumper wires, or software to maximize the transmitted duty cycle.
- 7) Measure the pulse width by determining the time difference between the two half-voltage points on the pulse.
- 8) When the pulse train is less than 100 mS, including blanking intervals, calculate the duty cycle by averaging the sum of the pulse widths over one complete pulse train. When the pulse train exceeds 100 mS, calculate the duty cycle by averaging the sum of the pulse widths over the 100 mS width with the highest average value.
- 9) The duty cycle is the value of the sum of the pulse widths in one period or 100 mS, divided by the length of the period or 100 mS.
- 10) The result is the duty cycle and the factor is derived by multiplying the  $\log(10)$  of the duty cycle by 20. This factor is then added to the peak detector reading and then compared to the average detector limit.

Period (mS) = 8.8 (default is 100 mS)

Long Pulse (mS) = Not Measured

Nr. Of Long Pulses = Not Counted

Short Pulse (mS) = Not Measured

Nr. Of Short Pulses = Not Counted

Duty Cycle = 8.8% (21.1dB) (Maximum Allowance is 20 dB)

Report No. SC204450-03A

**4.0 ATTESTATION STATEMENT**

**GENERAL REMARKS:**

**SUMMARY:**

All tests were performed per CFR 47, Part(s) 15.231(a), 15.231(b), 15.231(c)

■ - Performed

The Equipment Under Test

■ - **Fulfills** the requirements of CFR 47, Part(s) 15.231(a), 15.231(b), 15.231(c)
