EUT Description

Model: 614 Series/470-488MHz

Description: UHF Digital Signal Booster

Firmware: R21.D6

S/N: N/A

Additional Information:

The EUT is a Class B industrial UHF digital signal booster operating from 470 – 488 MHz. The downlink operates from 470 – 485 MHz and the uplink operates from 473 – 488 MHz.

Each band has a low power and high power output, configurable in software but not available to the end user, the selection of either low or high power is a factory setting only.

MPE calculations were performed for the downlink at low and high power using an antenna with – 4 dBi gain.

MPE calculations were performed on the uplink at low and high power using an antenna with – 1.28 dBi gain.

MPE calculations were performed at the manufacturer's rated output of +37 dBm +20 % using an antenna with 0 dBi gain.

MPE Evaluation

This is a Fixed device used in an **Uncontrolled** Exposure environment.
