FCC

2) The model differences appear to be firmware personality and support of RMII differences. While the information cites the firmware does not affect the RF frequencies, RF output power, or RF modulation – it does cite it can be programmed with a custom personality. Typically the term "personality" would also include the RF settings/parameters. <u>Therefore please confirm that regardless of the personality – that RF parameters are NOT changed or affected by custom personalities.</u>

3) The model differences appear to be firmware personality and support of RMII differences. While the information cites the firmware does not affect the RF frequencies, RF output power, or RF modulation – it does cite it can be programmed with a custom personality. Typically the term "personality" would also include the RF settings/parameters. <u>Therefore please confirm that regardless of the personality – that RF parameters are NOT changed or affected by custom personalities.</u>

Response from Joe Strzelecki

1. For FCC Item#2 and IC item#3: I certify "That regardless of the personality – that RF parameters are NOT changed or affected by custom personalities."
