

3. SUMMARY OF OPERATION AND FUNCTION

FUJIFILM, Model DM-R1 is an Image Memory Card Reader that is able to read digital images onto an image memory card so-called the SmartMedia or Microdrive and copy from the hard disk of a Personal Computer to those image memory card.

That is, digital images can be transferred to the IEEE1394 port of a personal computer with high-speed by using this Card Reader.

Those images on the SmartMedia can be also displayed on a PC monitor connected to the personal computer when you inserted a SmartMedia to the DM-R1.

To display the images fetched to a Windows personal computer, commercial JPEG image reading software is necessary.

When there are two or more IEEE1394 connectors, the DM-R1 can be connected to any port of IEEE1394 hub.

This Image Memory Card Reader can be connected to either an IEEE1394 port for the FireWire of Macintosh or the iLINK of Sony.

This is compact and light-weight (weight: 200g, dimension: 84 (W) x 26.5 (H) x 114 (D) mm), so it's easy to take along.

4. TEST FACILITY

The test site and conducted measurement facility of Japan Quality Assurance Organization used to collect the radiated data is located in 2096, Ohhata, Tsuru-Shi, Yamanashi 402 Japan.

This test site and conducted measurement facility has been fully described in a report that they have submitted to your office, and accepted in your letter dated March 30, 1999 (31040 / SIT).

5. SUMMARY OF TEST RESULTS

Radiated Radio Noise Measurement -----PASS

Conducted Radio Noise Measurement -----PASS
