

## ***Intermodulation (continued)***

---

- Intermodulation products are spurious emissions which must meet the emissions mask in each Radio Service rule part.
- Test Procedure - Should be tested at highest rated output level.
  - Three Signal Test
    - two near to each other at one edge of passband
    - other signal alone at other edge of passband
  - Two Signal Test - this requires the test be done twice.
    - Once with two signals at upper edge of passband.
    - Once with two signals at lower edge of passband.
