

0-07-03 FCC RESPONSE/ADDL REQUEST AND ADC RESPONSE

B. Regarding your answer to question 6 and 7 please provide response time of internal power measurement and follow-on attenuation control.

Answer: The internal power measurement and the attenuation control are basically the same thing in our equipment. The "attack" time of the internal power measurement/digital attenuator is around 100 uSEC (micro seconds). The "decay" time of the attenuator is around 100 mSEC (milli seconds).
