Attn: Application Examiner, Reviewing Engineer

Re: Barring of emergency codes (911)

The basestation conforms to GSM04.08 v8.0.0. The allowing or barring of emergency calls is controlled in the EC bit of RACH_CONTROL_PARAMETERS Information Element (see 4.08, section 10.5.2.29). This bit is managed by the operator of the mobile network to which this basestation is connected. Emergency call cannot be barred by the basestation if EC is set to zero.

Sincerely,

A handwritten signature in blue ink that reads "Mark F. Miska".

Mark F. Miska
Compliance Engineer
