Reference: FBRBGEN2-EI Class II Permissive Change Request

To Whom it May Concern:

Fleetwood Group Inc. hereby requests approval for a Class II permissive change to the Gen2 Base Unit (FCC ID: FBRBGEN2-EI) operated as a Part 15 Spread Spectrum transceiver. This product works in companion with Gen2 Keypads FCC ID: FBRKGEN2-EI. No changes were made to the keypads, but because the changes in the base unit (FBRBGEN2-EI) affect the operation of the keypads (FBRKGEN2-EI), tests were performed on the operation of both to insure the changes did not affect the compliance of either. Test Report #0600960C2C is included which shows the results of tests performed by AHD EMC Laboratory in Sister Lakes, Michigan confirming continued compliance of the system after the change.

The change which consists of modifications to the firmware was made to make possible operation with a reduced set of frequency hops (still meeting the FCC regulations for minimum hop requirements) in situations where there might be a significant amount of interference from other products operating in the same band such as wireless networks.

If you have any questions, please call me at 616-820-8237 or fax to 616-820-8300.

We look forward to your prompt action on this request.

Sincerely,

A handwritten signature in cursive script that reads "Harry Derks".

Harry Derks
Chief Technical Officer
