Subject: Response to Inquiry to FCC (Tracking Number 607965)

Inquiry:

- 1) We have a product that we are certifying as FHSS under 15.247 and fixed frequency under 15.249 as a modular approval. Typical testing was performed on fixed frequencies (low, mid, high) and in hopping mode with 75 channels. We are submitting a specific pseudo random hopping table with 75 channels. May this product be used with different pseudo random hopping sequences, with the number of channels between 15 - 75 as long as the other 15.247 requirements are met?

- 2) May a device certified under 15.249 for a range of frequencies (test on a low, mid and high channel) switch frequencies automatically within the certified range like an FHSS device?

Response:

1. yes
2. yes
