

Response to TCB Findings

1. In parts of the user manual and operational description the amplifier power rated value is shown as 12W. Please clarify.

The amplifier in general is rated for 12W, but in application field it will be used in the range of 5W maximum power to maintain linearity and that is what we are applying for.

2. Can the amplifier transmit on multiple channels simultaneously for conducted spurious emissions intermodulation concerns.

No it can not.
