

This product is basic pre 802.11ac. It is only supported one 80MHz bandwidth channel within 5150~5250MHz & another 80MHz bandwidth channel within 5725~5850MHz(15.247). These two 80MHz bandwidth will not transmit simultaneously at any given time so that it will be not required PBA procedure in below . It is also listed channel

In KDB 644545 , Permit but ask (PBA) rule

All devices that are capable of transmitting simultaneously in more than one Part-15 band between 5 and 6 GHz (i.e., in two or more of the four U-NII bands or in the 5.8 GHz 15.247 band and at least one U-NII band) are subject to Permit But Ask (PBA)1 provisions. This includes devices marketed as IEEE 802.11acTM or pre-ac.

The below figure is the channels list and any two or more channels will NOT transmit simultaneously at any given time.
