## **Chapter 1 - Product Overview**

### **Installing Your AirStation**

To install your AirStation, insert the software CD from your package into your computer and follow the directions on the screen. For more infomation about installation, turn to chapter 3 of this manual.

## **Professional or User-friendly?**

This AirStation wireless router comes with two different firmware packages. You may use either the dd-wrt-based Professional firmware or the simple User-friendly firmware. By default, the Professional firmware is preinstalled for US/EU products, and the User-friendly firmware is preinstalled for Asia-Pacific products. Turn to page 19 for instructions on switching between the two firmware packages.

Note : Most of this manual documents the user-friendly version of the firmware. For more information on the dd-wrt-based professional firmware, consult the help files in its web-based configuration interface or the *WZR-HP-AG300H User Manual for Professional Firmware*, available for download from Buffalo Technology.

### Features

#### Supports IEEE802.11n and IEEE802.11a/b/g

With support for current Wireless-N, Wireless-A, Wireless-G, and Wireless-B standards, the AirStation can transfer data to and from all standard 2.4 GHz and 5 GHz wireless clients. Simultaneous communication on 2.4 GHz and 5 GHz bands is supported.

#### **Dual speed mode**

Dual speed mode makes wireless transmission faster by using 2 channels, allowing 300 Mbps data transmission.

#### Supports AOSS and WPS

Both AOSS (AirStation One-touch Secure System) and WPS (Wi-Fi Protected Setup) are supported. These automatic connection standards make connection with compatible wireless devices easier.

#### Security Features

The AirStation is equipped with following security features:

- AOSS
- WPS
- WPA-PSK (TKIP/AES)
- WPA2-PSK(TKIP/AES)
- WPA/WPA2 mixed PSK
- WEP (128-bit/64 bit)
- Privacy Separator
- MAC address access restriction
- Deny Any Connection/SSID stealth
- Password for web-based control interface
- Firewall with easy rules

#### **Automatic Channel Selection**

Monitors wireless interference and automatically assigns the clearest, best channel.

#### Roaming

You can use multiple AirStations to cover a large area. Wireless clients can automatically switch AirStations for the best signal.

#### Initialization

To restore settings back to the factory defaults, hold down the Reset button on the bottom of the unit.

#### **Browser Based Administration**

This unit can be easily configured from a web browser on your computer.

#### Auto Mode (Router/Bridge Automatic Recognition)

In Auto mode, the AirStation will detect whether or not your network has a router and automatically switch to the appropriate router or bridge mode. You can also manually switch between modes. (See page 11.)

#### MovieEngine

MovieEngine uses QoS to optimise your network for multimedia streaming. This can reduce jumps, distorted audio, and dropped frames while watching streamed video.

#### NAS (Network Attached Storage)

Attach a USB hard drive to the AirStation and share it on the network as a NAS. All connected clients can access it.

#### **Gigabit Ethernet**

This unit supports gigabit Ethernet, allowing transmission rates of up to a billion bits per second.

## **Air Navigator CD Requirements**

The AirStation wireless router and access point works with most wired and wireless devices. However, the automatic installation program on the CD requires a connected Windows 7, Vista or XP computer to run. If you use the AirStation with a different operating system, you will have to configure your network settings manually from a browser window.

## 300 Mbps High Speed Mode

300 Mbps is the link speed when using Wireless-N mode. It represents actual wireless data speeds, including overhead. Because the overhead is not available for user data transfer, usable wireless throughput will be substantially slower.

## Package Contents

The following items are included in your AirStation package. If any of the items are missing, please contact your vender.

AC adapter	ĺ
Stand for vertical/horizontal/wall-mounting1	
Screws for wall-mounting	)
• LAN cable 1	
Air Navigator CD	
• Quick Setup Guide1	

### **Hardware Overview**

### Front Panel LEDs

#### **1** AOSS Button

To initiate AOSS, hold down this button until the 2.4 GHz LED and 5 GHz LED flash (about 1 second). Then, push or click the AOSS button on your wireless client device to complete the connection. Both devices must be powered on for this to work.

#### 2 Power LED (Green)

On:	The AC adapter is connected.
04	

Off: The AC adapter is not connected.

#### 3 2.4 GHz LED (Green or Amber)

Indicates 2.4 GHz wireless LAN and security status. Green on: Wireless link is enabled.

Wireless security is enabled.

- Amber Wireless link is enabled.
- on: Wireless security is disabled.

Green 2 AirStation is waiting for an AOSS or WPS security blinks: key.

AmberAOSS/WPS error; failed to exchange securityblinking:keys.

Off: Wireless LAN is disabled.

Note: The LED glows green if encryption is configured.

#### 4 5 GHz LED (Green or Amber)

Indicates 5 GHz wireless LAN and security status.

Green on:	Wireless link is enabled.
	Wireless security is enabled.
Amber on:	Wireless link is enabled.
	Wireless security is disabled.
Green 2 blinks:	AirStation is waiting for an AOSS or WPS security key.
Amber Blinking:	AOSS/WPS error; failed to exchange security keys.
Off:	Wireless LAN is disabled.
Note: The LED glows	green if encryption is configured.

#### 5 Router LED (Green)

On:	Router functionality is enabled.
Off:	Router functionality is disabled.

6 Diag LED (Red) This indicates the status of this unit depending on the number of blinks per cycle.
 Note: When the unit is first turned on or restarted, the Diag LED will blink for almost a minute during boot. This is normal.

Diag LED status	Meaning	Status
2 blinks *1	Flash ROM error	Cannot read or write to the flash memory.
3 blinks *1	Ethernet (wired) LAN error	Ethernet LAN controller is malfunctioning.
4 blinks *1	Wireless LAN error	Wireless LAN controller is malfunctioning.
5 blinks	IP address setting error	Because the network addresses of both the Internet port (WAN port) and the LAN port are the same, it is not possible to establish communication. Change the LAN side IP address of this unit.
Continuously blinking *2	Updating the firmware Saving settings Initializing settings	Updating the firmware. Saving the settings. Initializing the settings.

- \*1 Unplug the AC adapter from the wall socket, wait for a few seconds, and then plug it again. If the light still flashes, please contact technical support.
- \*2 Never unplug the AC adapter while the Diag LED is blinking continuously.

#### 7 Movie Engine LED (Blue)

On:Movie Engine functionality is enabled.Off:Movie Engine functionality is disabled.

#### 8 Movie Engine Switch

Switches the movie engine function between enabled and disabled.

- On: Movie Engine functionality is enabled.
- Off: Movie Engine functionality is disabled.

### Back Panel

#### 9 Router Switch

Switches router mode between enabled, disabled, and auto.

- On: Router functionality is enabled (router mode).Off: Router functionality is disabled (bridge/AP mode).
- Auto: This switches between modes automatically based on whether or not another router is detected on the Internet port. The default setting for this switch is Auto.

#### **10** USB Eject Button

To dismount a USB hard drive, hold down this button until the USB LED flashes (about 3 seconds). The USB drive can then be unplugged safely.

#### 11 USB LED (Green)

On: The USB disk is connected.

Off: The USB drive can be removed or no USB drive is connected.

Flashing: Overcurrent detected.

Note: When this LED is blinking, the connected USB drive cannot be used. Remove the connected USB drive. If the LED continues to blink even after the USB drive is removed, restart the AirStation.

Do not remove the USB drive or turn off the AirStation while the USB LED is on.

- **12 USB Port**Connect the USB drive.Note: USB hubs are not supported.
- **13 LAN Port** Connect your computer, hub, or other Ethernet devices to these ports. This switching hub supports 10 Mbps, 100 Mbps, and 1000 Mbps connections.

#### 14 LAN LED (Green)

On:	An Ethernet device is connected.
Flashing:	An Ethernet device is communicating.

**15 Internet Port**10 Mbps, 100 Mbps, and 1000 Mbps connections are supported.<br/>Note: In bridge/AP mode (router switch off), the Internet port becomes a<br/>regular LAN port, for a total of 5 usable LAN ports.

#### **16** Internet LED (Green)

DC Connector	Connect the included AC adapter here.
Flashing:	The Internet port is transmitting data.
On:	The Internet port is connected.

#### Bottom

17

**18 Reset Button** To reset all settings, hold down this button until the Diag LED comes on (about 3 seconds). Power must be on.

### **Right Side**

#### **19** Factory Default Settings

This sticker shows the AirStation's SSID, default encryption key, and WPS PIN code. By default, encryption is disabled for AirStations sold in Asia Pacific.

## **Chapter 2 - Placing Your AirStation**

### **Vertical Placement**

If the AirStation is to be placed vertically, attach the stand as shown.

### **Horizontal Placement**

When installing the AirStation horizontally, attach the stand for best heat dissipation.

Attach the stand as shown in the figure.

WZR-HP-AG300H User Manual

Install horizontally.

## Wall-Mounting

Snap the center of the AirStation to the stand as shown.

## **Chapter 3 - Installation**

### **Automatic Setup**

The AirNavigator CD can step you through installing your AirStation. To step through the setup program, insert the CD into your Windows 7/Vista/XP PC and follow the instructions on the screen. If your computer uses a different operating system, use manual setup instead.

- Note: To use a wireless client in Windows 7 or Vista, perform setup using the AirNavigator CD to automatically generate a profile for wirelessly connecting to the AirStation. After setup is complete, once the LAN cable is removed, you can connect from your wireless client to the AirStation.
  - Before performing setup, enable your computer's wireless client.

### **Manual Setup**

To configure your AirStation manually, follow the procedure below.

1 Verify that you can connect to the internet without the AirStation, then turn off your modem and computer.

Unplug the LAN cable which connects your computer and modem.

Make sure the mode switch on the back of the AirStation is in the "auto" position.

[AUTO].

**4** Plug one end of the LAN cable into your modem and the other end to the AirStation's Internet (WAN) port. Turn on the modem.

**5** Connect your computer to one of the AirStation's LAN ports with the LAN cable.

6

Turn on the AirStation, wait one minute, then turn on your computer.

7 Once your computer has booted, the AirStation's LEDs should be lit as described below:

Power	Green light on.
2.4 GHz	Green light on or amber light is on.
5 GHz	Green light on or amber light is on.
Router	Green light on or off depending on your network.
Diag	Off
LAN	Green light on or blinking.
Internet	Green light on or blinking.

For LED locations, refer to chapter 1.

8 Launch a web browser. If the home screen is displayed, setup is complete. If username and password fields are displayed, enter "root" for the user name. Enter "admin" for the password if you're using the professional firmware (default), or leave the password field blank if you've switched to the user-friendly firmware. Click [OK]. Step through the wizard to complete setup.

You've completed initial setup of your AirStation. Refer to Chapter 4 for advanced settings.

### **Firmware Differences**

You can choose between two different firmwares for your AirStation. By default, the professional firmware (dd-wrt) is installed. If you prefer, you may install the user-friendly firmware instead. The two firmwares have slightly different features, as shown in the chart below.

Function	Professional firmware (dd-wrt)	User-friendly firmware
Router mode switch functionality	_	✓
Default administrator name	root	root (fixed)
Default administrator password	admin	none
AOSS	✓	✓
WPS	✓	✓
WDS	✓	_

## **Changing Firmware**

To change between the professional firmware (dd-wrt) and the user-friendly firmware, follow the steps below.

#### Windows

1 Insert the AirNavigator CD into your computer. The setup wizard will automatically launch. Note: If the Setup Wizard does not launch, open the CD and double-click [ASSetWiz.exe] in the "Win" folder.

3

Click [Change Firmware].

The procedure for wiring will be displayed. Step through the wizard to connect your AirStation.

When this screen is displayed, click [Change Firmware].

Connect to 192.168.11.1

5

8 ×

Cancel

If requested, enter the AirStation's username and password.

Note: By default, the professional firmware doesn't have a username and a password configured. Set them before you go to the next step.

**6** When the following screen is displayed, make sure that the firmware file name is displayed, click [Upgrade] or [Apply], and follow the instructions on the screen.

Note: If the firmware name is not displayed on the screen, click [Browse...] and select the desired firmware. The firmware files are contained in the "Firmware" folder of the AirNavigator CD.

#### Professional firmware (dd-wrt) update screen:

#### User-friendly firmware update screen:

### **About this User Manual**

This user manual is primarily for AirStations with the user-friendly firmware. For more information on the professional firmware (dd-wrt), refer to **www.dd-wrt.com/wiki**.

## **Chapter 4 - Configuration**

The web-based configuration tool lets you change advanced settings for the AirStation. Don't change these settings unless you know what you're doing.

### Accessing the Web-based Configuration Interface

To configure the AirStation's advanced settings manually, log in to the web-based configuration interface as shown below.

#### 1 Launch a web browser.

Enter the AirStation's LAN-side IP address in the address field and press the Enter key.

Note: • The AirStation's default LAN-side IP address depends on the position of the mode switch. In router mode: 192.168.11.1

In bridge mode: 192.168.11.100

Note: If the router switch is set to auto and the unit is in bridge mode, then the AirStation's IP address was assigned by an external DHCP server.

 $\cdot\,\,$  If you changed the IP address of the AirStation, then use the new IP address.

3

2

When this screen appears, enter "root" (in lower case) for the username and the password that you set during initial setup. Click [OK].

Note: By default, the password is blank (not set).
If you forget your password, hold down the reset button (page 12) to initialize all settings. The password will then be blank. Note that all other settings will also revert to their default values.

This is the configuration interface, where most AirStation settings can be configured.

 Help is always displayed on the right side of each screen.
 Refer to the Help screens for more information on using the configuration interface.

Note : This example, like others in this manual, shows the user-friendly firmware. The dd-wrt based professional firmware is somewhat different. For more information on the professional firmware, visit dd-wrt's website at **www.dd-wrt.com**.

## **Configuration Interface Menus in Router Mode**

Parameter	Meaning
Internet/LAN (LAN Config)	Displays the configuration screen for the Internet port and LAN ports.
Wireless Config	Click this button to display the configuration screen for wireless settings.
Security	Click this button to display the configuration screen for security.

Parameter	Meaning
LAN Config	Click this button to display the configuration screen to open ports for games and applications.
NAS	Click this button to display the configuration screen for NAS settings.
Admin Config	Click this button to display the configuration screen for administration settings.
Diagnostic	Click this button to display the status of the AirStation.
Easy Setup	Enables you to easily configure the AirStation's network settings automatically.
MODE Information	This indicates the operation mode of the AirStation.
Internet Information	Displays WAN-side system information for the AirStation.
Check Connection	Click this button to check if the AirStation is connected to the Internet properly.
Refresh	Click this button to refresh the current screen.
WIRELESS	Displays the current wireless settings.
AOSS Setup	Click this button to display the AOSS configuration screen.
WPS Setup	Click this button to display the WPS configuration screen.
ECO Mode	This indicates the operating status of ECO Mode.
Network Service List	Displays the list of the network devices for which information is provided from the network on the LAN-side.
Media Server	Displays the status of the media server.
Download List	Displays the list of BitTorrent files downloading.
Language	Enables you to select the language you use.
Logout	Log out of the configuration interface. If the AirStation does not communicate for 5 minutes, it will log out automatically.

## Internet/LAN (LAN Config)

### Internet (Router Mode only)

Configure the WAN-side port ("Internet port").

No Preferred Connections are Registered.				efault PPPoE Conn	ection	
Edit Preferred Connections		lf	multiple destinations	are		
			re De	estination List, the de	estination -	

Parameter	Meaning
Default PPPoE Connection	If you have registered multiple connection destinations in the PPPoE Connection List, connection destinations selected here have priority. You need to configure the route to which PPPoE is connected to if you don't use the default settings.
IP Unnumbered PPPoE Connection	Select the destination from the PPPoE Connection List which is used when "Use IP Unnumbered" is chosen for the Method of Acquiring IP Address (page 32).
PPPoE Connection List	Edit PPPoE destination. You can register up to 5 sessions.
[Edit Connection List]	Click this button to edit destination settings.

Meaning
This is displayed when [Edit Connection List] is clicked.
Name of Connection Enter the name to identify the connected destination. You may enter up to 32 alphanumerical characters and symbols.
<b>Username</b> Enter the username specified by your ISP for PPPoE certification. You may enter up to 32 alphanumerical characters and symbols.
<b>Password</b> Enter the password specified by your ISP for PPPoE certification. You may enter up to 32 alphanumerical characters and symbols.
<b>Service Name</b> Fill in this field only if your ISP specifies a Service Name. Leave blank otherwise. You may enter up to 32 alphanumerical characters and symbols.
<b>Connection Type</b> Specifies the timing for the AirStation to connect to your provider.
Automatic disconnection Set time to disconnect after communication is stopped when the connection method is set to [Connect on Demand] or [Manual]. You can enter up to 1440 minutes.
<b>Authorization</b> Configure an authorization method with a provider.
<b>MTU Size</b> Configure the MTU size for PPPoE. Values of 578 to 1500 bytes may be entered.
<b>MRU Size</b> Configure MRU (Maximum Receive Unit) for PPPoE. Values of 578 to 1492 may be entered.

Parameter	Meaning		
PPPoE Connection No. *-Add	<b>Keep Alive</b> If Keep Alive is enabled, then the AirStation will issue an LCP echo request once a minute in order to maintain the connection with the PPPoE. If the server does not respond for more than 6 minutes, the line is recognized as disconnected and the AirStation will terminate the connection. [Disabled] is the recommended setting.		
Preferred Connections	Displays information you have set regarding to the connection destination route.		
[Edit Preferred Connections]	Click to edit the connection destination route settings.		
Preferred PPPoE Connection -Add	Click [Edit Preferred Connections] to display.		
	Name The destination to connect by PPPoE if [Destination address] and [Source address] match. Select the destination registered to the PPPoE Connection List.		
	<b>Destination address</b> When communicating to this address, the AirStation will communicate with [Name of Connection.]		
	<b>Source address</b> When communicating from this address, the AirStation will communicate with [Name of Connection.]		
#### DDNS (Router Mode only)

Configure Dynamic DNS settings. Many settings are only available when the appropriate Dynamic DNS service is enabled.

Parameter	Meaning
Dynamic DNS Service	Select a provider (DynDNS or TZO) for Dynamic DNS.
Username	Enter the Dynamic DNS username. You may enter up to 64 alphanumerical characters and symbols.
Password	Enter the Dynamic DNS password. You may enter up to 64 alphanumerical characters and symbols.
Hostname	Enter the Dynamic DNS hostname. You may enter up to 255 alphanumerical characters, hyphens, and periods.
Email Address	Enter the email address which is registered to the Dynamic DNS service. You may enter up to 64 alphanumerical characters and symbols.
TZO Key	Enter the TZO Key which is registered to the Dynamic DNS service. You may enter up to 64 alphanumerical characters and symbols.
Domain Name	Enter the domain name which is registered to the Dynamic DNS service. You may enter up to 255 alphanumerical characters, hyphens, and periods.

Parameter	Meaning
IP Address Update Period	Specifies the period to notify the dynamic DNS service provider of the current IP address. For DynDNS, set it between 0 and 35 days. For TZO, set it between 0 and 99 days. If 0 (zero) days is set, no periodic update is performed.
Internet Side IP Address	The WAN-side IP address of the AirStation's Internet port. This address is sent to the dynamic DNS service provider.
Domain Name	The domain name assigned by the dynamic DNS Service provider. The AirStation can be accessed from the Internet using this domain name.
Status	Display the status of dynamic DNS service.

OSS Ethern	et Converter	Information						WFAZ-FON,
Client Information MAC Address Encryption Type If Wireless Authorization is "WPA/WPA2 mixedmode - PSK" AOSS passes encryption key to								
							۱.	initial level to WPA-PSK-TKIP.

Parameter	Meaning
((())) A055	Initiates AOSS automatic wireless configuration. Click this, then press or click the AOSS button on your AOSS-compatible wireless client. Repeat for additional AOSS clients.
	Click this button to disconnect AOSS connections. Note: If AOSS connections are disconnected, the SSID and encryption keys will be restored to their last settings from before AOSS was used.
Encryption Type of Exclusive SSID for WEP	You may allow a separate SSID specifically for WEP connections. If "disabled" is selected, then clients will not be able to connect with WEP.
Encryption level expansion function	Expands security method from TKIP to WPA/WPA2-PSK-mixed mode.
Dedicated WEP SSID isolation	Set a separate SSID and network segment specifically for WEP connections. Devices connected with WEP will not be able to communicate with devices connected using AES/TKIP. All connected devices will be able to communicate with the internet.
Allow WEP for Game Console Only	When enabled, the AirStation allows wireless devices to connect with 64-bit or 128-bit WEP.
AOSS Button on the AirStation Unit	Uncheck to disable the physical AOSS button on the AirStation.
Current Encryption Information (AOSS connection only)	Displays the encryption type, SSID, and encryption key configured by AOSS.
[Random]	Click to enter random values for SSID, encryption key, and other settings.
[KEY base]	Click to return the SSID, encryption key, and other wireless settings to the values on the case sticker.
[Reset]	Click to return the SSID, encryption key, and other wireless settings to their previous values.
AOSS Client Information*	Displays AOSS clients connected to the AirStation and information of the devices which are wirelessly communicated.
AOSS Ethernet Converter Information* * Only displayed if there are AOSS Connections	Displays information about Ethernet converters connected to the AirStation via AOSS.

#### Basic

The screen to configure a basic wireless settings.

Setup Inte	rnet/LAN	Wireless Config	Security	LAN Config	NAS	Admin Config	Diagnostic	
WPS AOSS Bas Bas	ic(11n/a) ic(11n/g/)	Advanced(11n/a) Advanced(11n/a)	a) WMM(1 g/b) WMM(1	1n/a) MAC F 1n/g/b)	ilter Multic	ast Control	Logout	
	_					Basic Wireless Set (11n/a/g/b)	ting	
Wireless Radio	Enable							
Wireless Channel	Auto Chanr	nel 🔻 (Current Channel:	11)			You can set basic co	onfiguration	
300 Mbps Mode Bandwidth : 20 MHz Extension Channel : 1 -						ryption is not n will be his basic

Allow multiple SSIDs						(IEEE802.11n/a and IEEE802.11n/g/b) for wireless LANs, and you can perform setup		
Separate feature		🔲 Use				for each standard se	perately.	
SSID					e" will disable			
Wireless authentica	ation	WPA/WPA2 mixedmo	de - PSK 🔻			disabled, all wireless	functionality,	
Wireless encryption	Wireless encryption TKIP/AES mixedmode - Default value is enabled.					led.		
WPA-PSK (Pre-Sha	ared Key):	•••••				Wireless Channel	hannal	
Rekey interval : 60 minutes					(frequency band) for communication. If the	your wireless ere are other		
Apply						wireless clients near AirStation, you may interference. Change (and preferably non-c	the get to a different werlapping)	

Parameter	Meaning
Wireless Radio	Determines whether to allow wireless communication. If this is unchecked, then no wireless connections will be allowed.
Wireless Channel	Sets a channel (a range of frequencies) for wireless connections. With Auto Channel selected, the AirStation will automatically use the best available channel.
300 Mbps Mode	<ul> <li>300 Mbps mode uses twice the normal frequency range, 40</li> <li>MHz instead of 20 MHz. In uncongested areas this can increase performance. To use 300 Mbps mode, set the Bandwidth to 40 MHz and choose an Extension Channel.</li> <li>Note: If Auto Channel is selected, then the Extension Channel is set automatically.</li> </ul>

Parameter	Meaning
Broadcast SSID	If [Allow] is checked, then the AirStation will respond to SSID searches from wireless devices by broadcasting its SSID. If [Allow] is unchecked, then the AirStation ignores SSID searches from wireless devices.
Allow multiple SSIDs Use Single SSID	Clicking [Allow multiple SSIDs] will enable Multi Security, allowing the use of multiple SSIDs, each with different wireless security settings. Clicking [Use Single SSID] will disable Multi Security. The AirStation will then allow one SSID and one type of wireless security. Note: When using Multi Security, enable at least one of the following: SSID1, SSID2, or SSID3.
SSID1	Multi Security SSID1 can use WPA-PSK-TKIP or WPA/WPA2-Mixed for wireless security.
SSID2	Multi Security SSID2 can use WPA-PSK-AES for wireless security.
SSID3	Multi Security SSID3 can use WEP for wireless security.
Separate	When enabled, wireless devices connected to the AirStation can communicate only with the Internet side, not with each other.
SSID	Set SSID using 1 - 32 alphanumeric characters.
Wireless authentication	Specifies an authentication method used when connecting to a wireless device.

Parameter	Meaning
Wireless encryption	You may use any of the following types of encryption:
	<b>No encryption</b> Data is transmitted without encryption. With this setting, anyone within range can connect to your wireless network and might be able to access data on the network. Not recommended for anyone with private data that needs to be kept secure. [No encryption] can be selected only when [No authentication] is selected for wireless authentication.
	WEP WEP is a common encryption method supported by most devices. WEP can only be selected when wireless authentication is set to [No authentication]. Note that WEP's encryption is weak, and networks protected with WEP are not much more secure than those with no encryption at all. Not recommended for anyone with private data that needs to be kept secure.
	<b>TKIP</b> TKIP is an encryption method which is more secure than WEP, but slower. Use an pre-shared-key to communicate with a wireless device. TKIP can be selected only when WPA-PSK or WPA2-PSK is selected for Wireless authentication.
	AES AES is more secure than TKIP, and faster. Use a pre-shared-key to communicate with a wireless device. AES can be selected only when WPA-PSK or WPA2-PSK is selected for wireless authentication.
	<b>TKIP/AES mixed mode</b> TKIP/AES mixed mode allows both TKIP and AES authentication and communication. This is no more secure than TKIP alone, but more convenient for some users. TKIP/AES mixed mode can be selected only when WPA/WPA2 mixed mode - PSK is selected for wireless authentication.
WPA-PSK (Pre-Shared Key)	A pre-shared key or passphrase is the password for your wireless connections. There are two different formats for a pre-shared key. Use 8 to 63 alphanumeric characters (case-sensitive) for an ASCII passphrase, or use 64 alphanumeric characters (0 to 9 and a to f, not case- sensitive) for a hexadecimal passphrase.

Parameter	Meaning
Rekey interval	Set the update interval for the encryption key between 0 and 1440 (minutes).
Set up WEP encryption key	A WEP encryption key (passphrase) may have any of four different formats. An ASCII passphrase may use either 5 or 13 alphanumeric characters (case-sensitive). A hexadecimal passphrase may use either 10 or 26 alphanumeric characters (0 to 9 and a to f, not case-sensitive).

#### Advanced

Configure advanced wireless settings.

Setup	Internet	/LAN V	Vireless Config	Security	LAN Config	NAS	Adm	in Config	Diagnost	ic
WPS AC	SS Basi Basi	C(11n∕a C(11n∕	a) Advanced( g/b) Advanced(	11n⁄a) 11n⁄g⁄b)	WMM(11n/a) WMM(11n/g/h	MA(	C Filter	Multicast	Control Logou	ıt

			(C)2000-2	010 BUFFALO	INC. All rights reser	ved.				

Parameter	Meaning
Multicast Rate	Set the communication speed of multi-cast packets.
DTIM Period	Set the beacon responding interval (1 -255) for which the AirStation responds to a wireless device. This setting is effective only when power management is enabled for the wireless device.
Privacy Separator	If enabled, the Privacy Separator blocks communication between wireless devices connected to the AirStation. Wireless devices will be able to connect to the Internet but not with each other. Devices that are connected to the AirStation with wired connections will still be able to connect to wireless devices normally.

#### WMM

Set priorities for specific communications.

Setup Inte	rnet/LAN Wire	eless Config	Security	LAN Config	NA	S Admin Config	Diagnost	ic

(C)2000-2010 BUFFALO INC. All rights reserved.

Parameter	Meaning
WMM-EDCA Parameters	You don't usually need to change these settings. Using the default settings is recommended.
	<b>Priority</b> The following priorities may be applied to individual transmission packets: (Highest) 8, (High) 4, (Normal) 2, and (Low) 1. From the queue, these packets are processed in order of priority.
	<b>CWmin, CWmax</b> The maximum and minimum value of the contention window. The contention window is used in the frame collision avoidance structure performed in IEEE802.11, and generally, the smaller the value in the window, the higher the probability that the queue obtains the right to send.
	AIFSN The interval to send frames. The unit of the AIFSN is a slot, just as the window defined by CWmin and CWmax is. The smaller the interval of sending frames, the faster the algorithm can restart. As a result, the priority of the queue is higher.
	<b>TXOP Limit</b> The period of time that the queue can use after obtaining the right to send. The unit is 32 ms. The longer this time, the more frames can be sent per right to send. However, the queue may interfere with other packet transmissions. If TXOP Limit is set to 0 (zero), only one frame can be sent per right to send.
	<b>Admission Control</b> Restricts new frames from interfering with a previous queue. New packets are prioritized lower until a queue of them is collected. As the new queue accumulates more packets, its priority increases.

#### **MAC Filter**

Restrict access to specific wireless devices.

Setup	Internet/LAN	Wirele	ss Config	Security	LAN Config	NA	S Adm	nin Config	Diagnost	tic
WPS AC	DSS Basic(11n Basic(11n	∕a) ⁄g⁄b)	Advanced( Advanced(	11n⁄a) 11n⁄g⁄b)	WMM(11n/a) WMM(11n/g/b	) )	AC Filter	Multicast	Control Logou	ut

Edit F	Registration List						Check En filtering. T with regis	able to use f hen, only wire tered MAC A	gured. VAC eless clients ddresses	-
				040 DUEEALO	INO All rights reason					

Parameter	Meaning
Enforce MAC Filtering	Enable to restrict wireless connections to devices with registered MAC addresses.
Registration List	Displays the MAC addresses of registered devices which are permitted to connect wirelessly.
Edit Registration List	Adds a wireless device to the list of permitted devices.
MAC Addresses to be Registered	Enter a MAC address of a wireless device to permit to connect to the AirStation. Click [Register] to add that MAC address to the list.
List of all clients associated with this AirStation	Display the list of all MAC addresses of wireless devices connected to the AirStation.

#### **Multicast Control**

Configure restrictions on unnecessary multicast packets sent to the wireless LAN port.

Setup	Internet/L	AN Wirele	ess Config	Security	LAN Config	NAS	Admin Config	Diagnostic
WPS AC	DSS Basic(	11n⁄a)	Advanced	(11n⁄a)	WMM(11n/a)	MA	C Filter Multicast	Control

						1	Snooping	
Apply						:	Snooping observes mu control packets like IG control unnecessary p	Ilticast MP to acket
			(C)2000-2	2010 BUFFALO	INC. All rights reser	ved.		

Parameter	Meaning
Snooping	If enabled, snooping supervises multicast administrative packets such as IGMP and restricts unnecessary multicast transfers to wired or wireless ports.
Multicast Aging Time	Set the time to hold the data from multicast snooping in the range of 1 to 3600 (seconds). Enter a value bigger than the IGMP/MLD query interval.

# Security (Router Mode only)

# Firewall (Router Mode only)

Configure the AirStation's firewall.

	Setup	Internet/LAN Wireless Confi	g Security	LAN Config	NAS	Admin Config	Diagnosti	С			
	Firewall IP Filter VPN Pass Through										
ļ	Firewall										
Log Output Enable Limits the type of packets allowed to pass between the Internet and LAN. When packets reach the								ш			
	Enable	Basic Rules	Number of Pack	ets	Ai	Station, the firewall (	evaluates				
		Prohibit NBT and Microsoft-DS Routing  PPPoE1: Easy Setup Prohibit  O									
	<b>V</b>	Reject IDENT Requests		0	Int	ernet side and prever	nts leaking				
	V	Block Ping from Internet  PPPoE1: Easy Setup Ignore		0	secure information from the LAIN side.						
(	Apply				Cł Fii Th	og Output necking this box will i rewall information to a e default setting is d	record a log. isabled.	Ŧ			

Parameter	Meaning
Log Output	Enable to output a log of firewall activity.
Basic Rules	Enable to use any of the quick filters. Preconfigured quick filters include:
	<b>Prohibit NBT and Microsoft-DS Routing</b> Enabling this blocks communication using these protocols from the WAN side to the LAN side or from the LAN side to the Internet. You can configure this with PPPoE if you select [Use PPPoE Client] or [Use IP Unnumbered] in Method of Acquiring IP address (page 32), or if Easy Setup identified a PPPoE connection during setup.

Parameter	Meaning
	<b>Reject IDENT Requests</b> Enabling this option will answer IDENT requests from the Internet side with corresponding rejection packets. Enable this option if you experienced slow transfer speeds for network applications such as mail, ftp or web browsing. If you have configured transfer of IDENT requests to the LAN side computer in the address translation settings (DMZ or TCP port 113), then that setting has higher priority, and overrides this setting.
	Block Ping from Internet If this is enabled, the AirStation will not respond to pings from the Internet side. You can configure this with PPPoE if you select [Use PPPoE Client] or [Use IP Unnumbered] in Method of Acquiring IP address (page 32), or if Easy Setup identified a PPPoE connection during setup.

# IP Filter (Router Mode only)

Edit IP filters.

						point of origin. Accepted	-			

Parameter	Meaning
Log Output	If enabled, IP filter activity is saved to a log.
Operation	Specify how to process target packets.
Direction	Specify the transmission direction of target packets.
IP Address	Specify the sender's IP address and receiver's IP address of the target packets.
Protocol	Select a protocol for target transmission packet.
IP Filter Information	Display the list of IP filters which have been registered.

#### VPN Passthrough (Router Mode only)

Configure IPv6 passthrough, PPPoE passthrough, and PPTP passthrough.

Setup Internet/L	AN Wirele	ss Config	Security	LAN Config	NAS	Admin Config	Diagnostic		
Firewall IP Filter VPN Pass Through									
					v	PN Pass Through			
IPv6 Pass Through	Enable			Specify VPN Pass Through settings.			ough		
PPPoE Path Through	Enable				IF	v6 Pass Through			
PPTP Pass Through	Enable				S	elect whether to use	IPv6 Pass-		
Apply					Ť	ne default setting is d	isabled.		
						Note:	-		
		(C)2000-2	010 BUFFALO	INC. All rights reser	ved.				

Parameter	Meaning
IPv6 Passthrough	Enable to use IPv6 Passthrough for address translation.
PPPoE Passthrough	Enable to use PPPoE bridging. PPPoE bridging lets you automatically obtain an IP address from your provider for your LAN- side computer using the PPPoE protocol because PPPoE packets can pass between the Internet and LAN.
PPTP Passthrough	Enable to use PPTP passthrough for address translation.

# LAN Config (QoS)

Apply Web Access	Web Access	ccess Limits set to "Read/Write", "Read only" and "No access."							
The AirStation authorizes each	Apply							Web Access The AirStation authori	zes each

Parameter	Meaning
Shared Folder Name*	Enter a name for the shared folder. Up to 18 alphanumeric characters, spaces, hyphens (-), and underscores (_) may be used.
Shared Folder Description*	Enter a description of the shared folder (optional). Up to 75 alphanumeric characters, spaces, hyphens (-), and underscores (_) may be used.
Disk Partition Area*	Displays the partition area, format type, and the capacity of the USB disk.
Disclosed to*	Check the functionality that you want to support. Win/Mac OS (Samba NAS), Web Access, Media Server, and/or BitTorrent may be checked. Only one folder may be chosen for either Media Server or BitTorrent functionality.
Access Limits	If access limits are enabled, use the arrows to move highlighted users between the columns for [Read/Write], [Read-only], or [No access] privileges.

Parameter	Meaning
Web Access	You may also select to enforce access limits on users accessing through Web Access by checking the Access Limits checkbox. Users will have the same access levels as assigned above. If Access Limits is not checked, then all users accessing the shared folder via Web Access will have [Read only] access
Shared Folder Registration Information*	Displays information about the shared folder.

\* This is not displayed when Automatic USB Disk Assignment (page 68) is used:

The following shared folder settings are used when Disk Management is activated:

- All folders: Access limits in effect.
- Shared Folder/ Web Access: All folders are shared.
- Media Server/BitTorrent: The first folder is shared.

# User Management

This screen lets you add users to the access list with the ability to access shared folders.

Parameter	Meaning
Destination Address	Enter the IP address or hostname of the device that you are testing communication with, then click [Execute]. The result will be displayed below.

Note : Examples in this manual show the user-friendly firmware. The dd-wrt based professional firmware is somewhat different. For more information on the professional firmware, visit dd-wrt's website at **www.dd-wrt.com**.

# **Chapter 5 - Connect to a Wireless Network**

# Automatic Secure Setup (AOSS/WPS)

AOSS and WPS are systems that let you automatically configure wireless LAN settings. Just pressing the buttons will connect wireless devices and complete security settings. Easily connect to wireless devices, computers, or game machines which support AOSS or WPS.

AOSS (AirStation One-Touch Secure System) was developed by Buffalo Technology. WPS was created by the Wi-Fi Alliance.

- Before using AOSS/WPS to connect to a Buffalo wireless client, install Client Manager software from the included AirNavigator CD. Consult your wireless client's documentation for more information.
- Buffalo's Client Manager software can be used with the wireless LAN devices built into most computers. However, it is not guaranteed to work with all wireless LAN devices available. Some wireless clients may require manual setup.

#### Windows 7/Vista (Client Manager V)

If you are using Windows 7 or Vista, use the included Client Manager V software to connect wirelessly with AOSS/WPS.

**3** If the User Account Control screen opens, click [Yes] or [Continue].

Follow any instructions displayed on the screen. When the 2.4 GHz and 5 GHz LEDs on the front of the AirStation stop flashing and is lit steadily, the connection is complete.

## Windows XP (Client Manager 3)

If you are using Windows XP, use Client Manager 3 to connect wirelessly with AOSS/WPS.

1 Right click on the **?** icon in the system tray and select [Profile].

Click the [WPS AOSS] button.

It will take several seconds for your wireless connection to be configured. When the 2.4 GHz and 5 GHz LEDs on the front of the AirStation stop flashing and glow steadily, the connection is complete.

#### Mac OS X (AOSS Assistant)

If you are using Mac OS X 10.6 / 10.5 / 10.4, use the included AOSS Assistant software to connect wirelessly with AOSS.

- 1 Load the AirNavigator CD in your Macintosh.
- 2 Double-click the Mac folder in the AirNavigator CD.
- **3** Double-click [AOSS Assistant].
- **4** The software license screen is displayed. Click [Agree] to proceed.

It will take several seconds for your wireless connection to be configured. When the 2.4 GHz and 5 GHz LEDs on the front of the AirStation stop flashing and glow steadily, the connection is complete.

#### Other Devices (e.g. Game Console)

If you are using a game machine which supports AOSS or WPS, refer to that device's manual to initiate AOSS/WPS. When instructed, hold down the AOSS button on the AirStation for 1 second.

When the 2.4 GHz and 5 GHz LEDs on the front of the AirStation stop flashing and glow steadily, the connection is complete.

## **Manual Setup**

You can also connect to the AirStation without installing Client Manager V or Client Manager 3 by using the utility built-in to Windows. The procedure varies depending on which version of Windows you are using.

- Note: If the AirNavigator CD is used to perform setup when making the initial settings of AirStation, the wireless connection settings for the AirStation are completed during the Setup process. As a result, you do not need to make the settings below. After setup is complete, once the LAN cable is removed, you can connect from your wireless client to the AirStation.
  - Before performing setup, make the settings to enable the wireless client of the computer.

#### Windows 7 (WLAN AutoConfig)

With Windows 7, use WLAN AutoConfig to connect to the AirStation.

1 Click on the network icon in the system tray.

Select the target AirStation and click [Connect]. If you will be connecting to this device in the future, checking [Connect automatically] is recommended.

WZR-HP-AG300H User Manual

Type the networ	rk security key		
Security key:			
	Hide characters		
		_	
0	You can also connect by pushing the		
(1)	button on the router.		

Enter the encryption key and click [OK].

#### Windows Vista (WLAN AutoConfig)

With Vista, use WLAN AutoConfig to connect to the AirStation.

- 1 Right click on the wireless network 🗾 icon in the system tray.
- 2 Click [Connect to a network].

3

When this screen is displayed, select your network and click [Connect].

If the screen below is displayed, click [I want to enter the network key or passphrase instead]. Otherwise,go to step4.

🚱 👰 Connect to a network	
Enter the PIN for BUFFALO INC. WHR-G300N on 001D73B991D4	
You can find this PIN displayed on the BUFFALO INC. WHR -G300N.	
PIN:	
Display characters	
I don't have the PIN. I want to enter the network key or passphrase instead	
Next	Cancel

4	Connect to a network	Enter the encryption key and click [Connect].
	Type the network security key or passphrase for 001D738991D4 The person who setup the network can give you the key or passphrase.	
	Security key or passphrase:	
	Display characters	
	If you have a <u>USB flash drive</u> with network settings for 001D738991D4, insert it now.	
	Connect Cancel	

Step through the wizard to finish configuration.

If the Set Network Location screen is displayed, select [Home], [Work], or [Public location] depending on where you're using the AirStation.

#### Windows XP (Wireless Zero Configuration)

Windows XP includes Wireless Zero Config, a built-in utility to connect to your AirStation.

- Note: If Client Manager 3 is installed on your computer, Wireless Zero Config is disabled. Uninstall Client Manager 3 to use Wireless Zero Config, or just use Client Manager 3 to connect to the AirStation.
- 1 Right click on the 🕎 wireless network icon in the system tray.
- 2 Click [View Available Wireless Networks].

It will take several seconds for configuration to complete.

#### Mac OS X (AirPort)

Use AirPort on a Mac to connect to the AirStation.

It will take several seconds for configuration to complete.

# **Chapter 6 - Troubleshooting**

## Cannot connect to the Internet over wired connection.

- Make sure that your AirStation is plugged in!
- Check that the status LEDs of your AirStation are lit as below:

Power	Green light is ON
Router	Green light is ON or OFF (depending on your environment)
Diag	OFF
LAN	Green light is ON or flashing
Internet	Green light is ON or flashing

- Make sure that your computer is set to [obtain an IP address automatically]. (See appendix D)
- Restart your AirStation.

## Cannot access the web-based configuration Interface.

- See chapter 4 for instructions to open the AirStation's configuration interface.
- Enter the correct username and password to login to the configuration interface. The factory defaults are "root" (in lower case) for the username and a blank password (enter nothing). If you changed the password, enter the new password that you set.
- Verify that your web browser is not set to use proxies.
- Make sure that your computer is configured to [Obtain an IP Address Automatically.] (See appendix D)
- Restart your AirStation.

## Cannot connect to the network wirelessly.

• Configure your wireless client with the same SSID, encryption type, and encryption key as set on the AirStation.

The factory defaults are:

Note:	Encryption	is disabled by default in Asia Pacific.
Encryption	Key -	Printed on the label of the AirStation.
Encryption	Туре -	WPA/WPA2 mixed mode - PSK (Connect with either WPA-PSK TKIP or WPA2-PSK AES).
- סוככ		"_A" or "_G"
		BLIEFAL O-XXXXXX (the last 6 digits of the AirStation's MAC address) $\pm$

- Place your AirStation and wireless devices 2 10 feet apart.
- Restart your AirStation.

# You forgot AirStation's SSID, Encryption Key, or Password.

Hold down the reset button on the base of your AirStation for 3 seconds to initialize its settings. All settings, including your password, SSID, and encryption key will be initialized to their defaults. The factory defaults are:

SSID -	BUFFALO-XXXXXX (the last 6 digits of the AirStation's MAC address) +
	"_A" or "_G"
Encryption Type -	WPA/WPA2 mixed mode - PSK (Connect with either WPA-PSK TKIP or WPA2-PSK AES).
Encryption Key -	Printed on the label of the AirStation.
	(Encryption is disabled by default for Asia Pacific AirStations.)

# The link speed is slower than 300 Mbps (Maximum link speed is only 130 Mbps).

By default, the AirStation's 300 Mbps mode is not enabled. You may enable it with the following procedure:

- 1. Open the configuration interface (chapter 4).
- 2. In Easy Setup, click [Wireless SSID & Channel (11n 300 Mbps Mode)].
- 3. Change the value in [300 Mbps Mode] [Bandwidth] to 40 MHz and click [Apply].

If you still cannot connect at 300 Mbps, check the settings of your wireless client devices.

# **Other Tips**

#### Issue:

I reset my wireless router to factory settings and forgot how to log in to the configuration interface.

#### Answer:

Open your browser, enter 192.168.11.1 as the browser address, and hit Enter. You will be prompted to log in. Enter "root" for the username and leave the password box empty (no password). Click [OK] to complete the login and the option to reset your password will be available on the first page.

#### Issue:

How do I forward ports on my wireless router for my gaming console?

#### Answer:

Log in to the router's configuration interface. From the home page, go to the Internet Game/ Port Mapping section. Enter the port that needs to be forwarded and the IP address of the gaming console.

#### Issue:

How do I enable or modify security encryption settings on the wireless router?

#### Answer:

Log in to the configuration interface with your browser. Go to [Wireless Config] - [Security]. Buffalo recommends WPA for wireless encryption. The passphrase/key should be at least 8 characters in length.

#### Issue:

How do I change my wireless router's broadcasted network name (SSID)?

#### Answer:

Log in to the configuration interface. Go to the Wireless Config tab and then select the Basic tab if necessary. Find the settings area for SSID. Select the [Use] radio button and enter the name you wish to use for your network in the text field provided. Click [Apply] to save the settings. Once the wireless router has rebooted, select the new network name for all wireless devices and re-enter your encryption key if necessary.
#### Issue:

What can I do if my wireless connection drops randomly or seems slow?

#### Answer:

There are many environmental factors that may cause this. First, ensure the issue is not range related by moving the wireless router and the client device closer together. If the connection drops continue, then range is probably not the issue.

Other 2.4 GHz devices such as microwaves, other wireless networks, and 2.4 GHz wireless phones may impact performance. Try a different wireless channel for your wireless router. Log in to the wireless router with your browser. Click on the Wireless Config tab and then the Basic tab. Wireless channels from 1 - 13 may be selected. Try the Auto-Channel option if available. Otherwise, manually select an alternate channel and click [Apply].

#### Issue:

Though I am able to successfully make a connection with my wireless router, I am unable to access the Internet with my web browser.

#### Answer:

First, power off the Cable or DSL modem, the wireless router, and your computer. Move the router's mode switch to the *on* position. Verify that the modem is connected to the wireless router with an Ethernet cable to the WAN port. Power on the modem and wait one minute. Power on the wireless router and wait another minute. Power on the computer. Open a browser on the computer and navigate to a familiar website to verify whether the Internet connection is functioning normally. If after these steps, an Internet connection is still unavailable, power off the Cable or DSL modem and computer again and directly connect your computer to the Cable or DSL modem with a cable between the computer and the port on the modem. Power on the modem and wait one minute. Power on the computer and the port on the modem.

If an Internet connection IS NOT available with a direct connection to the computer, please call the Internet Service Provider who installed the modem.

If an Internet connection IS available with a direct connection to the computer, please call our customer support.

#### Issue:

Where can I download the latest drivers, firmware, and instructions for my Buffalo wireless products?

#### Answer:

The latest drivers and firmware are available online at *www.buffalotech.com* 

# **Appendix A - Specifications**

Wireless LAN Interface		
Standard Compliance	IEEE802.11a / IEEE802.11b / IEEE802.11g / IEEE802.11n	
Transmission Method	Direct Sequence Spread Spectrum (DSSS), OFDM, MIMO	
802.11a Frequency Range	Available 808.11a frequencies depend on the country of purchase. See the next	
	page for details.	
802.11g Frequency Range	2,412 - 2,472 MHz (Channels 1 - 13)	
Transmission Rate	802.11b:	
	11, 5.5, 2, 1 Mbps	
	802.11a/g:	
	802 11n	
	20MHz BW	
	(LongGl) 130, 117, 104, 78, 52, 39, 26, 13 Mbps (2 stream)	
	65, 58.5, 52, 39, 26, 19.5, 13, 6.5 Mbps (1 stream)	
	40MHz BW	
	(LongGl) 270, 243, 216, 162, 108, 81, 54, 27 Mbps (2 stream)	
	(ShortGl) 300 Mbps (2 stream)	
Access Mode	Infrastructure Mode	
Security	AOSS, WPA2-PSK (TKIP/AES), WPA/WPA2 mixed PSK, WPA-PSK (TKIP/AES), 128 /	
	64bit WEP, Mac Address Filter	
Wired LAN Interface		
Standard Compliance	IEEE802.3ab (1000BASE-T), IEEE802.3u (100BASE-TX), IEEE802.3 (10BASE-T)	
Transmission Rate	10 / 100 / 1000 Mbps	
Transmission Encoding	1000BASE-T 4DPAM5, 100BASE-TX 4B5B/MLT-3, 10BASE-T Manchester Cording	
Access Method	CSMA/CD	
Speed and Flow Control	10 / 100 / 1000 Mbps, Auto Sensing, Auto MDIX	
Number of LAN Ports	4	
LAN Port Connector	RJ-45	
USB Interface		
Interface	USB 2.0	
Connector Type	Type A (plug)	
Compliance	5.0 V 500 mA (max 1000 mA)	

Other	
Power Supply	External AC 100-240 V Universal, 50/60 Hz
Power Consumption	About 13.2 W (Max)
Dimensions	165 mm x 158 mm x 35mm (6.5 x 6.2 x 1.3 in.)
Weight	330 g (11.6 oz.) (not including the stand)
Operating Environment	0 - 40° C (32 - 104° F), 20 - 80% (non-condensing)

802.11a Frequency Range		
USA	5,180 - 5,240 MHz (Channels 36, 40, 44, 48)	
Canada	5,745 - 5,825 MHz (Channels 149, 153, 157, 161, 165)	
EU	5,180 - 5,240 MHz (Channels 36, 40, 44, 48)	
Kuwait	5,260 - 5,320 MHz (Channels 52, 56, 60, 64)	
Saudi Arabia		
UAE		
Oman		
Qatar		
Egypt		
Singapore	5,180 - 5,240 MHz (Channels 36, 40, 44, 48)	
Australia	5,260 - 5,320 MHz (Channels 52, 56, 60, 64)	
Hong Kong	5,745 - 5,825 MHz (Channels 149, 153, 157, 161, 165)	
The Philippines		
India		
Thailand		
Malaysia		
South Korea	5,180 - 5,240 MHz (Channels 36, 40, 44, 48)	
	5,745 - 5,825 MHz (Channels 149, 153, 157, 161, 165)	
China	5,745 - 5,825 MHz (Channels 149, 153, 157, 161, 165)	
Taiwan	5,745 - 5,825 MHz (Channels 149, 153, 157, 161, 165)	

# **Appendix B - Default Configuration Settings**

Feature	Parameter	Default Setting
Internet (Router Mode only)	Method of Acquiring IP Address	Perform Easy Setup (Internet Connection Wizard)
	Default Gateway	none
	Address of DNS Name Server	none
	Internet MAC Address	Use Default MAC Address
	MTU Size of Internet Port	1500 Bytes
PPPoE	Default PPPoE Connection	No Active Session
(Router Mode only)	IP Unnumbered PPPoE Connection	No Active Session
	PPPoE Connection List	none
	Preferred Connections	none
DDNS	Dynamic DNS Service	Disabled
(Router Mode only)	Current Dynamic DNS Information	none
VPN Server	LAN Side IP Address	192.168.11.1(255.255.255.0)
(Router Mode only)	DHCP Server Function	Enabled
	DHCP IP Address Pool	192.168.11.2 for up to 64 Address(es)
	PPTP Server Function	Disabled
	Authorization Type	MS-CHAPv2 (40/128-bit Encryption)
	Server IP Address	Auto
	Client IP Address	Auto
	DNS Server IP Address	LAN IP address of the AirStation
	WINS Server IP Address	none
	MTU/MRU value	1396
	PPTP User List	none

Feature	Parameter	Default Setting
LAN	LAN Side IP Address	Router Mode (Router Switch AUTO/ON): 192.168.11.1 (255.255.255.0)
		Bridge Mode (Router Switch OFF): 192.168.11.100 (255.255.255.0)
		Bridge Mode (Router Switch AUTO): Obtain automatically from DHCP Server
	DHCP Server Function (Router Mode only)	Enabled
	DHCP IP Address Pool (Router Mode only)	192.168.11.2 for up to 64 Addresses
	LAN Side IP Address (For IP Unnumbered) (Router Mode only)	none
	Lease Period (Router Mode only)	48 Hours
	Default Gateway (Router Mode only)	AirStation's IP Address
	DNS Servers (Router Mode only)	AirStation's IP Address
	WINS Server (Router Mode only)	Do Not Specify
	Domain Name (Router Mode only)	Assigned Domain Name
	Default Gateway (Bridge Mode only)	none
	DNS Server Address (Bridge Mode only)	none
DHCP Lease (Router Mode only)	Current DHCP Client Information	none
NAT	Address Translation	Enabled
(Router Mode only)	Log Output of Deleted Packets	Disabled
Route	Routing Information	none

Feature	Parameter	Default Setting	
WPS	WPS	Enabled	
	External Registrar	Enabled	
	AirStation PIN	An 8-digit random value	
		(Printed on the label of the AirStation)	
	WPS Security Information	WPS status: configured SSID: BUFFALO-XXXXXX (the last 6 digits of the AirStation's MAC address) + "_A" or "_G"	
		Security: WPA/WPA2 mixedmode - PSK TKIP/AES mixedmode or none	
		Encryption key: Either a 13-digit random value or disabled. Printed on the label of the AirStation. Encryption is disabled by default settings on AirStation for Asia Pacific.	
AOSS	Encryption Type of Exclusive SSID for WEP	none	
	Encryption level expansion function	Enabled	
	Dedicated WEP SSID isolation	Disabled	
	Allow WEP for Game Console Only	Disabled	
	AOSS Button on the AirStation Unit	Enabled	
Basic	Wireless Radio	Enabled	
	Wireless Channel	Auto Channel	
	300 Mbps Mode	Band Width: 20 MHz Extension Channel: -	
	Broadcast SSID	Allow	
	Separate feature	not used	
	SSID	Use AirStation's MAC address	
	Wireless authentication	WPA/WPA2 mixedmode - PSK, or no authentication	
	Wireless encryption	TKIP/AES mixedmode, or no encryption	
	WPA-PSK (Pre-Shared Key)	A 13-digit random value or disabled (Printed on the label of the AirStation. Encryption is disabled in default settings on AirStation for Asia Pacific.)	
	Rekey interval	60 minutes

## **Appendix C - Checking Wireless Signal Quality**

For users of Windows 7, Vista, or Mac OS X (10.4 and later), software supplied with the AirStation can be used to check the quality and strength of the wireless signal.

### Windows 7/Vista

- Note: If Client Manager V is not already installed, install it from the AirNavigator CD. Click [Install Wireless Client Driver and Application] > [Options] > [Advanced Installation], and install Client Manager V.
  - · Client Manager V does not support Windows XP.

Click [Advanced Setup].

When the Client Manager V status screen is displayed, click []] .

4	🕗 🖾 🖂 🖉
	<u>File V</u> iew
	Adapter BUFFALO WLI-UC-G300N Wireless LAN Adapter 🗸
	[dBm] [Mbps]       -20       300       100         -40       240       75       50         -60       144       50       25         Rssi Level[dBm]       Link Speed[Mbps]       Signal Quality[%]
	<b>2.4GHz</b> 1 2 3 4 5 6 7 8 9 10 11 12 13 14
	<b>W52 W53</b> 34 36 38 40 42 44 46 48 52 56 60 64
	<b>W56</b> 100 104 108 112 116 120 124 128 132 136 140

Parameter	Meaning
Connection status	Signal strength (dBm), link speed (Mbps), and signal quality (%) are displayed in one-minute intervals on a real-time graph.
Usage status by channel	The 11b/11g display shows usage in the 2.4 GHz band channels 1 to 14. The 11a display shows usage in the W52, W53, and W56 channels.

Colors are used to indicate the signal strength of the access point. Colors closer to red indicate an access point with a stronger signal strength, and colors closer to blue indicate an access point with a weaker signal strength.

### Macintosh

- 1 Load the AirNavigator CD into your Macintosh.
- 2 Double-click the Mac folder in the AirNavigator CD.
- **3** Double-click [WLAN Monitor].

**4** The software license screen is displayed when starting for the first time only. Click [Agree] to proceed.

	WLAN Monitor
BUFFALD	300
Network Name (SSID) BUFFALO-C000D8_A	Mun 2
IP Address	192.168.11.2
Security	WPA2 Personal
- Encryption	AES
Band	5 GHz (11n/a)
Channel	56
Link Speed	300 Mbps
Quality	80 %
and the second s	-27 dBm

Parameter	Meaning
Network name (SSID)	This displays the SSID of the AirStation that is currently connected.
Status	This indicates the current connection status.
IP Address	This indicates the IP address of the current wireless network port (AirPort).
Security	This indicates the authentication method for the current connection target.
Encryption	This displays the encryption type for the current connection target.
Band	This displays the wireless band for the current connection target.
Channel	This displays the wireless channel for the current connection target.
Link Speed (Mbps)	This displays the current link speed.
Quality (%)	This displays the current signal quality.
Signal Level (dBm)	This indicates the strength of the current signal.

## **Appendix D - TCP/IP Settings**

### Windows 7

To configure TCP/IP in Windows 7, follow the procedure below.

- 1 Click [Start] > [Control Panel] > [Network and Internet].
- 2 Click [Network and Sharing Center].
- **3** Click [Change Adapter Settings] on the left side menu.
- **4** Right-click on [Local Area Connection], then click [Properties].
- 5 If the User Account Control screen opens, click [Yes] or [Continue].
- **6** Select [Internet Protocol Version 4 (TCP/IPv4)] then click [Properties].
- **7** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each setting. Examples:

 If the router's IP address is 192.168.11.1,

 IP address
 192.168.11.80

 Subnet mask
 255.255.255.0

 Default gateway
 192.168.11.1

 Preferred DNS server
 192.168.11.1

 Alternate DNS server
 blank

8 Click [OK].

## Windows Vista

To configure TCP/IP in Windows Vista, follow the procedure below.

- 1 Click [Start] > [Settings] > [Control Panel].
- 2 Click [Network and Sharing Center].
- **3** Click [Manage network connections] on the left side menu.
- **4** Right-click on [Local Area Connection], then click [Properties].
- 5 If the User Account Control screen opens, click [Yes] or [Continue].
- **6** Select [Internet Protocol Version 4 (TCP/IPv4)], then click [Properties].
- **7** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each settings. Example:

If the router's IP address is	192.168.11.1,
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

8 Click [Close].

## Windows XP

To configure TCP/IP in Windows XP, follow the procedure below.

- 1 Click [Start] > [Settings] > [Control Panel].
- 2 Double-click [Network].
- **3** Right click on [Local Area Connection], then click [Properties].
- **4** Select [Internet Protocol (TCP/IP)], then click [Properties].
- **5** To have DHCP set your IP address settings automatically, check [Obtain an IP address automatically] and [Obtain DNS server address automatically].

To set your IP address settings manually, enter values for each setting. Examples:

If the router's IP address is	192.168.11.1,
IP address	192.168.11.80
Subnet mask	255.255.255.0
Default gateway	192.168.11.1
Preferred DNS server	192.168.11.1
Alternate DNS server	blank

6 Click [Close].

## Mac OS X

To configure TCP/IP in Mac OS X, follow the procedure below.

- 1 Click [Apple menu] > [System Preferences...].
- 2 Click [Network].
- **3** Click [Ethernet].
- **4** To have DHCP set your IP address settings automatically, select [Using DHCP] in the Configure IPv4 field.

To set your IP address settings manually, select [Manually] in the Configure IPv4 field and enter values for each setting. Examples:

If the router's IP address is	192.168.11.1,
IP Address	192.168.11.80
Subnet Mask	255.255.255.0
Router	192.168.11.1
DNS Server	192.168.11.1
Search Domains	blank

**5** Click [Apply].

## **Appendix E - Restoring the Default Configuration**

With the AirStation powered on, hold down this button for 3 seconds to return it to factory default settings.

## **Appendix F - Shared Folders and the USB Port**

There are several restrictions on using the AirStation's USB port:

- When using two-byte characters (such as Japanese), keep folder and file names within 80 characters. You may not be able to copy a folder or a file whose name length is more than 80 characters.
- You cannot set attributes (hidden or read-only) for folders or files on the AirStation.
- When using access restrictions, you can register up to 16 users for the AirStation.
- Please note that you are not allowed to use any of the following words as a user or group name: adm, administrator, all, bin, daemon, disk, ftp, guest, halt, hdusers, kmen, lp, mail, man, news, nobody, nogroup, none, operator, root, shadow, shutdown, sshd, sync, sys, ttyusers, utmp, uucp, www.
- Please note that you are not allowed to use any of the following words as a shared folder name: global, homes, printers, bittorrent, disk1\_pt1, disk1\_pt2, disk1\_pt3, disk1\_pt4, disk2\_pt1, disk2\_pt2, disk2\_pt3, disk2\_pt4, disk3\_pt1, disk3\_pt2, disk3\_pt3, disk3\_pt4, disk4\_pt1, disk4\_pt2, disk4\_pt3, disk4\_pt4.
- If shared folder names, work group names, or file names contain any of the following characters, you may not access data or manipulate files on the AirStation properly. In such a case, use a different character.
- If a file created on a Macintosh contains any of the following characters, it will not be displayed correctly under Windows OS. Also, you cannot copy or properly display a file when connecting via SMB from Mac OS X if it contains any of these characters:
   ?[]/\=+<>;:", |\*
- Cancelling or aborting a file copy may leave the file incomplete, and you may no longer be able to delete the incomplete file. This can also happen during a power outage or if the LAN cable is suddenly disconnected. If it happens, restart the AirStation, delete the file, and try copying the file again.
- Use the same username and password for the AirStation as the user's Windows login. If they are different, the user may not be able to access shared folders with access restrictions on the AirStation.
- Date and time stamps stored on the USB hard drive may be updated by the OS accessing the AirStation. File creation or access dates may not be maintained.

- If you view the size of a hard drives on the browser, it shows a bigger value than when you see it in Windows' drive properties. This is because the browser shows the size of the drive in gigabytes but Windows shows it in gibibytes.
- If you have logged in using a "guest" account from Windows 7, Vista, XP or 2000, access restrictions may not work properly. A (different) guest account already exists on the AirStation.
- If you access a shared folder from a Macintosh computer, additional Mac OS X information files may be automatically generated. Do not delete these files from a Windows computer. Otherwise, you may no longer be able to access folders from a Macintosh.
- Device types that can be connected to the AirStation's USB connector are USB hard drives, USB memory sticks, or USB card readers. Card readers with 5 or more slots are not supported. USB devices such as a digital cameras, CD/DVD drives, USB hubs, mice, or keyboards are not supported.
- Encrypted USB hard drives are not supported.
- Only one single drive may be connected to the AirStation's USB port at a time. Drives manufactured by other companies besides Buffalo Technology are not supported.
- If your hard drive has an auto power mode switch, move the switch to [manual] or [on]. Leaving the switch set to [auto] may result in unpredictable behavior.
- Up to 4 partitions can be recognized on a USB hard drive.
- Available file systems for USB hard drives are FAT12, FAT16, FAT32, and XFS.

# **Appendix G - Regulatory Compliance Information**

### **Federal Communication Commission Interference Statement**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

For operation within 5.15 ~ 5.25GHz frequency range, it is restricted to indoor environment. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

### Important Note - FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands are country dependent and are firmware programmed at the factory to match the intended destination. The firmware setting is not accessible by the end user.

WZR-HP-AG300H with PCB Dipole antenna and max. antenna gain is 3.13 dBi in 2.4G and 3.04 dBi in 5G.

### Industry Canada statement:

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

#### Caution:

The device for the band 5150-5250 MHz is only for indoor usage to reduce potential for harmful interference to co-channel mobile satellite systems.

High power radars are allocated as primary users (meaning they have priority) of 5250-5350 MHz and 5650-5850 MHz and these radars could cause interference and/or damage to LE-LAN devices.

### **Important Note - Canada Radiation Exposure Statement:**

This equipment complies with Canada radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

### Europe – EU Declaration of Conformity

This device complies with the essential requirements of the R&TTE Directive 1999/5/EC. The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the R&TTE Directive 1999/5/EC:

EN60950-1: 2006 +A11: 2009 Safety of Information Technology Equipment

EN50385 : (2002-08)

Product standard to demonstrate the compliance of radio base stations and fixed terminal stations for wireless telecommunication systems with the basic restrictions or the reference levels related to human exposure to radio frequency electromagnetic fields (110MHz - 40 GHz) - General public

#### EN 300 328 V1.7.1: (2006-10)

Electromagnetic compatibility and Radio spectrum Matters (ERM); Wideband Transmission systems; Data transmission equipment operating in the 2,4 GHz ISM band and using spread spectrum modulation techniques; Harmonized EN covering essential requirements under article 3.2 of the R&TTE Directive

#### EN 301 893 V1.5.1: (2008-12)

Broadband Radio Access Networks (BRAN); 5 GHz high performance RLAN; Harmonized EN covering the essential requirements of article 3.2 of the R&TTE Directive

#### EN 301 489-1 V1.8.1: (2008-04)

Electromagnetic compatibility and Radio Spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements

EN 301 489-17 V2.1.1 (2009-05)

Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment; Part 17: Specific conditions for Broadband Data Transmission Systems

This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies.

In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services.

This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 – 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.

# € 0560 ①

#### Česky [Czech]

Buffalo Technology Inc. tímto prohlašuje, že tento AirStation WZR-HP-AG300H je ve shodě se základními požadavky a dalšími příslušnými ustanoveními směrnice 1999/5/ES.

#### Dansk [Danish]

Undertegnede Buffalo Technology Inc. erklærer herved, at følgende udstyr AirStation WZR-HP-AG300H overholder de væsentlige krav og øvrige relevante krav i direktiv 1999/5/EF.

#### Deutsch [German]

Hiermit erklärt Buffalo Technology Inc. dass sich das Gerät AirStation WZR-HP-AG300H in Übereinstimmung mit den grundlegenden Anforderungen und den übrigen einschlägigen Bestimmungen der Richtlinie 1999/5/EG befindet.

#### Eesti [Estonian]

Käesolevaga kinnitab Buffalo Technology Inc. seadme AirStation WZR-HP-AG300H vastavust direktiivi 1999/5/EÜ põhinõuetele ja nimetatud direktiivist tulenevatele teistele asjakohastele sätetele.

#### English

Hereby, Buffalo Technology Inc. declares that this AirStation WZR-HP-AG300H is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

#### Español [Spanish]

Por medio de la presente Buffalo Technology Inc. declara que el AirStation WZR-HP-AG300H cumple con los requisitos esenciales y cualesquiera otras disposiciones aplicables o exigibles de la Directiva 1999/5/CE.

#### Ελληνική [Greek]

ΜΕ ΤΗΝ ΠΑΡΟΥΣΑ Buffalo Technology Inc. ΔΗΛΩΝΕΙ ΟΤΙ AirStation WZR-HP-AG300H ΣΥΜΜΟΡΦΩΝΕΤΑΙ ΠΡΟΣ ΤΙΣ ΟΥΣΙΩΔΕΙΣ ΑΠΑΙΤΗΣΕΙΣ ΚΑΙ ΤΙΣ ΛΟΙΠΕΣ ΣΧΕΤΙΚΕΣ ΔΙΑΤΑΞΕΙΣ ΤΗΣ ΟΔΗΓΙΑΣ 1999/5/ΕΚ.

#### Français [French]

Par la présente Buffalo Technology Inc. déclare que l'appareil AirStation WZR-HP-AG300H est conforme aux exigences essentielles et aux autres dispositions pertinentes de la directive 1999/5/CE.

#### Italiano [Italian]

Con la presente Buffalo Technology Inc. dichiara che questo AirStation WZR-HP-AG300H è conforme ai requisiti essenziali ed alle altre disposizioni pertinenti stabilite dalla direttiva 1999/5/CE.

#### Latviski [Latvian]

Ar šo Buffalo Technology Inc. deklarē, ka AirStation WZR-HP-AG300H atbilst Direktīvas 1999/5/EK būtiskajām prasībām un citiem ar to saistītajiem noteikumiem.

#### Lietuvių [Lithuanian]

Šiuo Buffalo Technology Inc. deklaruoja, kad šis AirStation WZR-HP-AG300H atitinka esminius reikalavimus ir kitas 1999/5/EB Direktyvos nuostatas.

#### Nederlands [Dutch]

Hierbij verklaart Buffalo Technology Inc. dat het toestel AirStation WZR-HP-AG300H in overeenstemming is met de essentiële eisen en de andere relevante bepalingen van richtlijn 1999/5/ EG.

#### Malti[ Maltese]

Hawnhekk, Buffalo Technology Inc., jiddikjara li dan AirStation WZR-HP-AG300H jikkonforma malħtiġijiet essenzjali u ma provvedimenti oħrajn relevanti li hemm fid-Dirrettiva 1999/5/EC.

#### Magyar [Hungarian]

Alulírott, Buffalo Technology Inc. nyilatkozom, hogy a AirStation WZR-HP-AG300H megfelel a vonatkozó alapvető követelményeknek és az 1999/5/EC irányelv egyéb előírásainak.

Polski [Polish]

Niniejszym Buffalo Technology Inc. oświadcza, że AirStation WZR-HP-AG300H jest zgodny z zasadniczymi wymogami oraz pozostałymi stosownymi postanowieniami Dyrektywy 1999/5/EC.

Português [Portuguese]

Buffalo Technology Inc. declara que este AirStation WZR-HP-AG300H está conforme com os requisitos essenciais e outras disposições da Directiva 1999/5/CE.

Slovensko [Slovenian]

Buffalo Technology Inc. izjavlja, da je ta AirStation WZR-HP-AG300H v skladu z bistvenimi zahtevami in ostalimi relevantnimi določili direktive 1999/5/ES.

Slovensky [Slovak] Buffalo Technology Inc. týmto vyhlasuje, že AirStation WZR-HP-AG300H spĺňa základné požiadavky a všetky príslušné ustanovenia Smernice 1999/5/ES.

Suomi [Finnish] Buffalo Technology Inc. vakuuttaa täten että AirStation WZR-HP-AG300H tyyppinen laite on direktiivin 1999/5/EY oleellisten vaatimusten ja sitä koskevien direktiivin muiden ehtojen mukainen.

Svensk [Swedish]

Härmed intygar Buffalo Technology Inc. att denna AirStation WZR-HP-AG300H står I överensstämmelse med de väsentliga egenskapskrav och övriga relevanta bestämmelser som framgår av direktiv 1999/5/EG.

### Taiwan:

SAR compliance has been established in typical laptop computer(s) with CardBus slot, and product could be used in typical laptop computer with CardBus slot. Other application like handheld PC or similar device has not been verified, may not comply with related RF exposure rules, and such use shall be prohibited.

### Safety

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines of this manual and of the computer manufacturer must therefore be allowed at all times to ensure the safe use of the equipment.

#### 根據 NCC 低功率電波輻射性電機管制辦法:

#### 第十二條:

經型式認證合格之低功率射頻電機,非經許可,公司、商號或使用者均不得擅自變更頻率、加 大功率或變更原設計之特性及功能。

#### 第十四條:

低功率射頻電機之使用不得影響飛航安全及干擾合法通信;經發現有干擾現象時,應立即停 用,並改善至無干擾時方得繼續使用。前項合法通信,指依電信法規定作業之無線電通信。低 功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

5.25-5.35秭赫頻帶內操作之無線資訊傳輸設備,限於室內使用。

## **Appendix H - Environmental Information**

- The equipment that you have purchased has required the extraction and use of natural resources for its production.
- The equipment may contain hazardous substances that could impact health and the environment.
- In order to avoid the dissemination of those substances in our environment and to diminish the pressure on the natural resources, we encourage you to use the appropriate take-back systems.
- The take-back systems will reuse or recycle most of the materials of your end life equipment in a sound way.
- The crossed-out wheeled bin symbol invites you to use those systems.

• If you need more information on collection, reuse, and recycling systems, please contact your local or regional waste administration.

# **Appendix I - GPL Information**

The source code for Buffalo products that use GPL code is available at *http://opensource.buffalo.jp/*.

## **Appendix J - Warranty Information**

Buffalo Technology (Buffalo Inc.) products come with a two-year limited warranty from the date of purchase. Buffalo Technology (Buffalo Inc.) warrants to the original purchaser the product; good operating condition for the warranty period. This warranty does not include non-Buffalo Technology (Buffalo Inc.) installed components. If the Buffalo product malfunctions during the warranty period, Buffalo Technology/(Buffalo Inc.) will, replace the unit, provided the unit has not been subjected to misuse, abuse, or non-Buffalo Technology/(Buffalo Inc.) authorized alteration, modifications or repair.

All expressed and implied warranties for the Buffalo Technology (Buffalo Inc) product line including, but not limited to, the warranties of merchantability and fitness of a particular purpose are limited in duration to the above period.

Under no circumstances shall Buffalo Technology/(Buffalo Inc.) be liable in any way to the user for damages, including any lost profits, lost savings or other incidental or consequential damages arising out of the use of, or inability to use the Buffalo products.

In no event shall Buffalo Technology/(Buffalo Inc.) liability exceed the price paid for the product from direct, indirect, special, incidental, or consequential damages resulting from the use of the product, its accompanying software, or its documentation. Buffalo Technology (Buffalo Inc.) does not offer refunds for any product.
