

## Tune-up Procedure

The EUT is factory calibrated for peak power. For peak power, the EUT is set to transmit a CW signal at 915.00 MHz at full power. This output signal is measured with an Agilent power meter (Model no. E4419B) and a high power sensor (Model no. E9301H). The unit is then tested to meet the following specifications: Maximum Power output range +30 dBm; Accuracy +/-1.0 dB.
