

MPE Calculator		HVIN: MPRX5		Test Number: 220330																																									
RF Exposure uses EIRP for calculation. EIRP is based on TX power added to the antenna gain in dBi.																																													
dBi = dB gain compared to an isotropic radiator.																																													
S = power density in mW/cm ²																																													
Transmitter Output power (mW)		1999.9																																											
Transmitter Output power (W)		2.00																																											
Output Power for % duty Cycle operation (Watts)		100		Antenna Gain (dBi) 14																																									
Output Power for 100% duty Cycle operation (Watts)		2.00		Antenna Gain (Numeric) 25.12																																									
Tx Frequency (MHz)		915		Calculation power (Watts) 2.00																																									
Cable Loss (dB)		0.0		Adjusted Power (dBm) 33.01																																									
				Antenna Gain (dBd) 11.83																																									
				Antenna minus cable (dB) 14.00																																									
				Antenna Gain (Numeric) 25.12																																									
		Calculated ERP (mw) 30478.950		EIRP = Po(dBm) + Gain (dB)																																									
		Calculated EIRP (mw) 50234.259		Radiated (EIRP) dBm 47.010																																									
				ERP = EIRP - 2.17 dB																																									
				Radiated (ERP) dBm 44.840																																									
		<div style="border: 1px solid black; padding: 5px;"> Power density (S) mW/cm² = $\frac{\text{EIRP}}{4\pi r^2}$ </div>																																											
		r (cm) EIRP (mW)

f = Transmit Frequency (MHz)		f (MHz) = 915		General Public 915 MHz																																									
P _T = Power Input to Antenna (mW)		P _T (mW) = 1,999.8619		Occupational 1,999.8619 mW																																									
Duty cycle (percentage of operation)		% = 100		100 %																																									
P _A = Adjusted Power due to Duty cycle or Cable Loss (mW)		P _A (mW) = 1,999.86		1,999.86 mW																																									
G _N = Numeric Gain of the Antenna		GN (numeric) = 25.12		25.12 numeric																																									
S ₂₀ = Power Density of device at 20cm (mW/m ²)		S ₂₀ = (P _A G _N)/(4πR ₂₀) ² = 9.99		9.99 mW/m ²																																									
S ₂₀ = Power Density of device at 20cm (W/m ²)		S ₂₀ = (P _A G _N)/(4πR ₂₀) ² = 99.94		99.94 W/m ²																																									
S _L = Power Density Limit (W/m ²) FCC		S _L (W/m ²) = 6.100		30.500 W/m ²																																									
S _L = Power Density Limit (W/m ²) Canada		S _L (W/m ²) = 2.767		19.526 W/m ²																																									
R _C = Minimum distance to the Radiating Element for Compliance (cm) FCC		R _C = √(P _A G _N /4πS _L) = 81.0		36.2 cm																																									
R _C = Minimum distance to the Radiating Element for Compliance (cm) Canada		R _C = √(P _A G _N /4πS _L) = 120.2		45.2 cm																																									
S _C = Power Density of the device at the Compliance Distance R _C (W/m ²) FCC		S _C = (P _A G _N)/(4πR _C) ² = 6.10		30.50 W/m ²																																									
S _C = Power Density of the device at the Compliance Distance R _C (W/m ²) Canada		S _C = (P _A G _N)/(4πR _C) ² = 2.77		19.53 W/m ²																																									
R ₂₀ = 20cm		R ₂₀ = 20		20 cm																																									
				For Compliance with Canada General Population Limits, User Manual must indicate a minimum separation distance of 120.2 cm																																									
				Or in Meters for Compliance with Canada General Population Limits, a minimum separation distance of 1.20 Meters																																									
Summary: Standalone MPE Calculations and Summary																																													
	Tx Duty Cycle (%)	Tx Frequency (MHz)	Power Total (mW)	Antenna Gain (numeric)	Public Limit	Public
