I have looked into this response and updated exhibits. It is getting clearer, but I still have questions:

Part 87 check sheet listed:

118.05 MHz

127.50

136.95

151.95 (cannot find in 80 or 87)

156.3000

157.4250

Part 80 Check Sheet listed:

161.775 (listed as Coast Station in 80.871)

The letters seem to indicate that all 7 frequencies are being approved for both 80/87, but this does not seem to be the case. Please confirm the breakout listed above for 80 and 87 and then if the 151.95 MHz is in Part 87.

[Response: Frequency 151.95MHz has been removed from test report, Form 731 and CIIPC cover letter. Please refer to the updated files. Frequency 161.775 is a Coast Station.](#)
