## **FCC 47 CFR MPE REPORT**

### KYE SYSTEMS CORP.

# Multimedia Speaker

Model Number: SP-HF2800 BT

Additional Model: SP-HFXXXX XX (X can be 0-9 & A-Z)

FCC ID: FSUGG00A4

## **Maximum Permissible Exposure**

## 1. Applicable Standards

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.2m normally can be maintained between the user and the device.

#### 1.1. Limits for Maximum Permissible Exposure (MPE)

#### (a) Limits for Occupational/Controlled Exposure

| Frequency  | Electric Field | Magnetic Field | Power Density (S) | Averaging Times                        |
|------------|----------------|----------------|-------------------|--|
| Range      | Strength (E)   | Strength (H)   | $(mW/cm^2)$       | $\mid E \mid^2$ , $\mid H \mid^2$ or S |
| (MHz)      | (V/m)          | (A/m)          | ,                 | (minutes)                              |
| 0.3-3.0    | 614            | 1.63           | (100)*            | 6                                      |
| 3.0-30     | 1842/f         | 4.89/f         | (900/f)*          | 6                                      |
| 30-300     | 61.4           | 0.163          | 1.0               | 6                                      |
| 300-1500   |                |                | F/300             | 6                                      |
| 1500-10000 |                |                | 5                 | 6                                      |

#### (b) Limits for General Population / Uncontrolled Exposure

| Frequency   | Electric Field | Magnetic Field | Power Density (S) | Averaging Times                  |
|-------------|----------------|----------------|-------------------|----------------------------------|
| Range (MHz) | Strength (E)   | Strength (H)   | $(mW/cm^2)$       | $  E  ^2,   H  ^2 \text{ or } S$ |
|             | (V/m)          | (A/m)          |                   | (minutes)                        |
| 0.3-1.34    | 614            | 1.63           | (100)*            | 30                               |
| 1.34-30     | 824/f          | 2.19/f         | (180/f)*          | 30                               |
| 30-300      | 27.5           | 0.073          | 0.2               | 30                               |
| 300-1500    |                |                | F/1500            | 30                               |
| 1500-10000  |                |                | 1.0               | 30                               |

Note: f=frequency in MHz; \*Plane-wave equivalent power density

EST Technology Co. ,Ltd Report No. ESTE-R1909128 Page 2 of 4

#### 1.2. MPE Calculation Method

$$E (V/m) = \frac{\sqrt{30 \times P \times G}}{d}$$
 Power Density: Pd (W/m<sup>2</sup>) =  $\frac{E^2}{377}$ 

E = Electric Field (V/m)

P = Peak RF output Power (W)

G = EUT Antenna numeric gain (numeric)

d = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = \frac{30 \times P \times G}{377 \times d^2}$$

From the peak EUT RF output power, the minimum mobile separation distance, d=0.2m, as well as the gain of the used antenna, the RF power density can be obtained

# 2. Conducted Power Result

| Mode      | Frequency (MHz) | Peak output power (dBm) | Peak output power (mW) | Target      | Antenna gain |          |
|-----------|-----------------|-------------------------|------------------------|-------------|--------------|----------|
|           |                 |                         |                        | power (dBm) | (dBi)        | (Linear) |
| GFSK      | 2402            | -0.81                   | 0.8299                 | $0\pm1$     | -0.58        | 0.8750   |
|           | 2441            | -0.89                   | 0.8147                 | $0\pm1$     | -0.58        | 0.8750   |
|           | 2480            | -0.89                   | 0.8147                 | $0\pm1$     | -0.58        | 0.8750   |
| π/4-DQPSK | 2402            | -0.24                   | 0.9462                 | $0\pm1$     | -0.58        | 0.8750   |
|           | 2441            | -0.38                   | 0.9162                 | $0\pm1$     | -0.58        | 0.8750   |
|           | 2480            | -0.36                   | 0.9204                 | $0\pm1$     | -0.58        | 0.8750   |

## 3. Calculated Result and Limit

|           |                    | Antenna gain |          |         | Limited |                |
|-----------|--------------------|--------------|----------|---------|---------|----------------|
|           |                    |              |          | Power   | of      |                |
|           | Target power (dBm) | (AD;)        | (Linear) | Density | Power   | Test<br>Result |
| Mode      |                    |              |          | (S)     | Density |                |
|           |                    |              |          | (mW     | (S)     |                |
|           |                    |              |          | /cm2)   | (mW     |                |
|           |                    |              |          |         | /cm2)   |                |
| GFSK      | 1                  | -0.58        | 0.8758   | 0.00022 | 1       | Compiles       |
| π/4-DQPSK | 1                  | -0.58        | 0.8758   | 0.00022 | 1       | Compiles       |
