

NOTICE: The changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Information

The Federal Communication Commission Radio Frequency Interference Statement includes the following paragraph.

The equipment has been tested and found to comply with the limits for a Class B Digital Device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate frequency energy and, if not installed and used in accordance with the instruction, may cause harmful interference to radio communication. However, there is no grantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.

--Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

--Consult the dealer or an experienced radio/TV technician for help.

The user should not modify or change this equipment without written approval from Sampo corporation.

Modification could void authority to use this equipment.

■ Camera Architecture

● Front View

● Back View

Caution: You must use shoulder belt to stick reset key.

● **Top View**

● **Bottom View**

● Side View

■ System Requirement

- PC : 80486 above
- Windows 95 or Windows 98
- Windows NT 4.0 above
- 8 MB above RAM
- 10 MB above Hard disk space
- VGA Monitor (SVGA is better)

■ Camera Startup and Status Display

■ How to startup camera

If you want to startup camera

1. Put batteries into battery bay or connect AC voltage.
2. Slide mode switch to CAM or PLAY position.
3. If slide to CAM, you have to press Dis key to start LCD. If

power has connected but camera do not start, press shutter.

4. If slide mode switch to OFF, camera will shut off.

5. When camera is off, confirm camera's power is off.

■ Connect camera to AC voltage

You can use AC voltage as camera's power source. Plug one terminal of AC adapter into outlet, then plug another terminal into camera's power jack.

Caution: 1. VIVICAM 2800 adopt **6V** AC adapter.

2. If camera is idle for one minute, camera will shut off automatically.

■ Status Display

Camera's status is displayed on B/W LCD. you can view current status and settings.

888 Picture Count

The upper-right digits shown on B/W LCD was **Picture Count**. In CAM mode, it was picture count you can capture. In PLAY mode, it means the picture count in memory card. If memory card is not inserted, LCD will display 「NO CARD」. If memory card is full, LCD will display 「CARD FULL」, you have to replace a new one.

If you want to remove memory card

1. Open side compartment door of camera.
2. Push the memory card ejector..
3. Take memory card off slightly.

If you want to insert memory card

1. Open side compartment door of camera.
2. Hold memory card and target it right.
3. Insert card into memory card bay.

FLASH

VIVICAM 2800 has redeye-reduction flash which ranges from 50cms to 3m. VIVICAM 2800 has four flash modes.

 **Auto-Flash:** When you set auto-flash, camera will use flash by itself. If light source is too weak, camera will start flash automatically.

 **Red-Eye:** VIVICAM 2800 has redeye reduction flash. It will flash one more time before capturing in order to diminish red-eye . The remaining operation is totally the same with Flash mode.

 **Flash:** Flash will be used each time when you take picture.

 **Flash-Off:** Flash will be shut off. It is default. ◦

If you want to change flash mode

1. Start camera in CAM mode.
2. Press Flash key to switch flash mode.

MACRO

VIVICAM 2800 provides **Macro** function. It will adjust camera's focus to 20cms. It will be convenient when you take picture of near object.

If you want to use Macro

1. Start camera in **PLAY** mode.

2. Press **Macro Key** to start or close Macro function.

If you want to close Macro function, you have to press Macro key again. When camera is off, Macro is also closed.

Quality

You can set picture quality to **Good** ▸ **Better** ▸ **Best**. Quality setting stands for compression level of picture. The better quality picture has, the more space will be occupied.

Quality setting will use following symbols on camera's B/W LCD.

Best: When resolution is high, and quality setting is **Best**, a 4 MB memory card can store 12 pictures.

Better: When resolution is high, and quality setting is **Better**, a 4 MB memory card can store 24 pictures.

Good: When resolution is high, and quality setting is **Good**, a 4 MB memory card can store 46 pictures.

If you want to change picture quality setting, please refer to 「CAM MENU」 「Image Quality」。

Battery

VIVICAM 2800 can use 4 AA battery as camera's power source.

Camera's battery power will eliminated by time elapsed, and its power can be understood on camera's B/W LCD.

 When three indication is full, it means battery power is full, you do not need to worry it.

 When two of three indication is full, it means batteries has been used, but it still can work.

 When one of three indication is full, it means battery power is low, LCD can start only in PLAY mode, though camera still can work.

 When three indications are empty, it means battery power is used up, please replace them.

How to place batteries

1. Put thumb upon the battery door.
2. Slide off battery door.
3. Place batteries into battery bay then close bay door.

Resolution

VIVICAM 2800 provides two resolution standards to choose: **Large**, its resolution is 1024*768, and **Small**, its resolution is 640*480. If you choose large resolution, picture size will be larger, and it will occupy more memory card space.

Resolution setting will use following symbols on B/W LCD.

Large: The pictures' resolution are 1024*768, It is default.

Small: The pictures' resolution are 640*480.

If you want to change resolution setting, please refer to

「CAM MENU」 「Picture Resolution」.

Self-Timer

When you are capturing, you can use **self timer** in order to obtain more time to prepare capture. When self timer is started, camera will take picture after 10 seconds while you press shutter key. When finished, self timer will be disabled.

If you want to set self timer, please refer to 「CAM MENU」 「Self Timer」.

■ CAM Mode

If you slide mode switch to **CAM**, camera will have following functions:

1. Preview picture on LCD.
2. Take picture.
3. Adjust exposure.

■ How to preview picture

If you want to preview picture

1. Slide mode switch to **CAM**
2. Press **Disp** key to activate LCD.
3. You can preview images from LCD.

4. You can press **Disp** key to swap LCD to: LCD-with information, LCD-no information, LCD-off.
5. You can press **T** or **W** key to adjust image size. ◦

In Preview mode, picture information are displayed below.

■ How to take picture

● If you want to take picture

1. Insert memory card.
2. Start camera in CAM mode.
3. Press Disp key to activate LCD.
4. Put the object in the center of View Finder.
5. Press Shutter key.

Caution: Because VIVICAM 2800 adopts two-step shutter, you have to press shutter key full-down so that it will photo. While in capturing, camera's power lamp will blink, but you do not need to hold shutter key tightly. You have to wait until power lamp terminated blinking so that you can take next picture. If you press shutter with half-down, the picture count column of camera's B/W LCD will be the focus after auto-focus process. And if you press T or W key to zoom in or zoom out image, The digits of this column will be the zoom factor without dot sign. If a green dot appear on bottom of LCD when you press shutter, it reveals focus and exposure has already fixed, you can press shutter key to take picture now.

■ EXPOSURE ADJUSTMENT

Camera's exposure can be adjusted at anytime. Exposure ranges from -3.0 to +3.0. You can adjust 0.5 each time.

If your picture is too dark, you can press + key to increase exposure

If your picture is too bright, you can press - key to decrease exposure.

● If you want to adjust exposure

1. Start camera in CAM mode.
2. Press Disp key to activate LCD.
3. You can press +/- key to change exposure.

When you press +/- keys in CAM mode, LCD will display

Exposure indication table will show on LCD. While you press +/- key to adjust exposure, current exposure will display in **Picture Count** column on B/W LCD, but dot sign ignored.

■ CAM MENU

In CAM mode, you can not only preview picture · take picture · adjust exposure, but also you can set many preview functions and parameters.

Physical damage or improper operation of camera will cause images data of storage media being erased. Please transfer images date to PC to ensure the storage of image data.

■ Capture Notice

● How to handle flash to get good picture

1. You had better use Auto-Flash to let camera detect environment by itself to achieve best capture condition.
2. In the situations of flash inhibited, we can use No-Flash.
3. The range of flash is within 0.5 to 3 m, but 1.5 is the best distance.
4. When use Macro to capture. please do not set the flash direct toward eye or it will harm your eyes.
5. Please Avoid of taking pictures toward light source to ensure image is clear.
6. In Near-distance capturing(about 15 cm~20cm),please select No-Flash or it will be over-exposure. If the light source is not enough, enhance it with other light source.

● While you are capturing

1. Look at view finder, aim the object you want to take, try to look straight at the object.
2. Do not let your hand block the camera lens. When the lens are dirty, please use soft and clean cloth to clean it.
3. When you are satisfied with scene, you can press shutter, processing image compression , and store them to memory card.
4. While pressing down shutter key, please do not shake camera or it will make image fuzzy.

■ Usage Environment

The acceptable temperature of the camera is 0-40 ° C(=32-104 F).

The acceptable moisture of the camera is 45 % -85 % .

Please do not use the camera in the situations below:

**The place where sun directly illuminated
high-moisture or seriously dusted
Air-conditioned warmer or in vicinity of hot object
Enclosed space or under sun.
The place where is strongly vibrating.**

Cautions: 1. When you are under low temperature, bring the camera indoors. If the environment suddenly has temperature change, camera's inner or outer will cause ice-frozen

2. In order to prevent ice-frozen, please put camera in plastic bag in advance. Until the temperature is near the environment temperature, you can take the camera out. If ice-frozen is happened, please take the batteries from camera and open the battery bay door until ice is melted.

■ Trouble Shooting

Trouble	Reason	Solution
Camera does not power on when power connected	Battery Installation is wrong	Re-install batteries
	Batteries are used up	Replace batteries
	AC adapter is not adequate	Use proper AC adapter
Can not transfer picture to PC	Baud rate is not right	Change baud rate
	Camera does not power on	Power on camera
	Connection is not correct	Ensure connection
Memory card does not work	Memory card not formatted	Format memory card on PC first
	Memory card does not suit	Replace memory card
	Memory card damaged	Replace memory card
Can not output video image	TV's specification is wrong	Change another TV
	Connection with TV is improper	Check connection With TV
	Channel improper	Change proper channel
	Camera mode is not correct	Check camera's LCD is started
Picture is too dark	Flash does not work	Set flash to Auto-Flash
	Object is too far from flash	Adjust object distance with camera
	Object is in front of light	Adjust capture position
Picture is too bright	Flash works	Set flash to No-Flash
	Object is too near from flash	Adjust object distance with camera
Picture is fuzzy	Exposure is not correct	Adjust exposure
	Object distance is not proper	Adjust macro position ot shutter speed
	Lens is dirty	Clean lens

Picture can not be erased	Camera mode is wrong	Set camera is correct mode
	Memory card damaged	Replace memory card
Camera does not work	Battery low or no battery	Replace batteries
	AC adapter is not adequate	Please adopt proper AC adapter
	Battery installation is wrong	Re-install batteries
Shutter does not work	Camera is not in CAM mode	Switch to CAM mode
	Camera is processing image	Wait processing is done.
	Memory card full	Replace or clean memory card
