

Technical Description of TX (FCC ID: G2R-126400)

1. MCU GPC11024 (U1) accepts the input data from keyboard and then encode the data to the RF amplifier (U2) input.
2. IC GRPC205A (U2), crystal Y1 (27.145MHz) and associated network act as the RF amplifier.
3. LED (D1) and associated network act as the light indicating pointer when keyboard is used.
4. Q2 and associated network act as the 3V regulator for the whole circuit.
