

FCC ID: G6D4GHS

Circuit Description

The 27.145MHz crystal oscillator drives the base of Q1 the final/buffer amplifier. The modulation provided by IC. The output of Q2 has the matching network consisting of L2, L3, L4, C6, C7, C8, C9 and R9 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 51cm long Metal antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt ("AA" size battery x 6) primary battery

Operation Descriptions

The transmitter is a remote control toy operating at 27.145MHz band. The transmitter is powered by a 9V battery ("AA" size battery x 6) and the transmitting frequency is crystal controlled. There are 1 knob and 1 trigger to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the 27.145MHz carrier frequency.

Remarks:

The transmitter is a 1 knob and 1 trigger transmitter. The EUT continues to transmit while one of the switches is being pressed. Modulation by IC; and type is Pulse modulation.
