

FCC ID: G6D8200H
Circuit Description

The 49.86MHz crystal oscillator drives the base of Q1 the final/buffer amplifier. The modulation provided by IC. The output of Q2 has the matching network consisting of L3 and C6, C7, C8 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 38cm long Metal antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt ("AA" size battery x 6) primary battery

Operation Descriptions

The transmitter is a remote control operating at 49.86MHz band. The transmitter is powered by a 9V battery ("AA" size battery x 6) and the transmitting frequency is crystal controlled. There are 2 joystick to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the 49.86MHz carrier frequency.

Remarks:

The transmitter is a 2 joystick transmitter. The EUT continues to transmit while joystick is being pressed. It is joystick transmitter, Modulation by IC; and type is Pulse modulation.
