## **Test Result Summary**

EMISSION TEST							
Test requirement: FCC Part 15 - 2012							
Test Condition Test Method Test Result							
Test Condition	Test Method	Pass	Failed				
Radiated Emission Test,	ANSI C63.4	$\square$					
9kHz to 1GHz							
Frequency range of Fundamental Emission	ANSI C63.4	$\boxtimes$					
26dB Bandwidth of Fundamental Emission	ANSI C63.4	$\boxtimes$					
Duty Cycle Correction During 100mesc	ANSI C63.4	$\square$					

## Report Revision & Sample Re-submit History:

## **Test Laboratory & Test Instruments List**

Radiated and Conducted emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2009. An Open Area Test Site and Full Anechoic Chamber (FCC Listed Site, Registration No. 642151) are set up for investigation and located at:

### BUREAU VERITAS HONG KONG LIMITED, EMC CENTRE

No. 2106-2107, 21/F., Westin Centre, 26 Hung To Road, Kwun Tong, Kowloon, Hong Kong

# **Equipment Under Test [EUT]**

Description of Sample:Product:RaModel No.:GeAdditional Model:--Additional Model Information:--Power Supply:3V

Radio Control Toy Transmitter G6DG31H-3 --

3Vd.c. ("AA" size battery x 2)

### **Description of EUT Operation:**

The Equipment Under Test (EUT) is a NEW BRIGHT INDUSTRIAL CO., LTD of Radio Control toy. The transmitter is 2 switches and operating at 27.145MHz. The EUT continues to transmit while sticks are being pushed or pulled, Modulation by IC, and type is pulse modulation. The transmitter has different control:

1. Left stick – control forward and backward

2. Right stick – control left and right

### Antenna Requirement (Section 15.203)

The EUT is use of a permanently antenna. The antenna consists of 35cm long wire. It is soldered on the PCB. The antenna is not replaceable or user serviceable. There are no deviations or exceptions to the specifications.

A failure to raise such issue within the prescribed time shall constitute, your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

## Photo of Antenna

## **Test Results**

## **Radiated Emissions (Fundamental)**

Test Requirement:	FCC Part 15 Section 15.227
Test Method:	ANSI C63.4
Test Date(s):	2013-11-27
Temperature:	22.0 °C
Humidity:	68.0 %
Atmospheric Pressure:	100.8 kPa
Mode of Operation:	Transmission mode
Tested Voltage:	3Vd.c. ("AA" size battery x 2)

### **Test Method:**

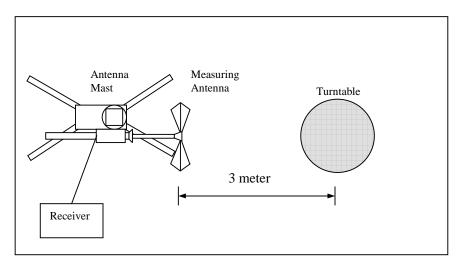

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 - 2009.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, For battery operated equipment, the equipment tests shall be perform using new battery. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is place 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1m above the ground.

Location: The Roof, Westin Centre, 26 Hung To Road, Kwun Tong, Kowloon, Hong Kong

### Test Setup: Open Area Test Site

### 26dB Bandwidth of Fundamental Emission

Test Requirement:	FCC 47 CFR 15.227
Test Method:	ANSI C63.4
Test Date(s):	2013-11-27
Temperature:	22.0 °C
Humidity:	68.0 %
Atmospheric Pressure:	100.8 kPa
Mode of Operation:	Transmission mode
Tested Voltage:	3Vd.c. ("AA" size battery x 2)

#### Test Method:

The bandwidth is measured at an amplitude level reduced from the reference level by a specified ratio. The reference level is the level of the highest amplitude signal observed from the transmitter at the fundamental frequency. Once the reference level is established, the equipment is conditioned with typical modulating signal to produce the worst-case (i.e. the widest) bandwidth.

Frequency	26dB Bandwidth	Limits
[MHz]	[KHz]	[MHz]
27.1456	99.84	within 26.96 – 27.28

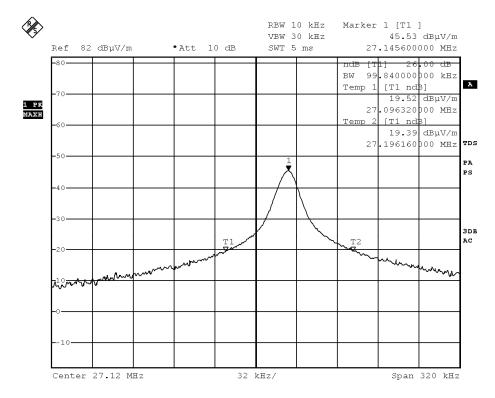

#### Limits for 26dB Bandwidth of Fundamental Emission:

## **Duty Cycle Correction During 100msec:**

Each function key sends a different series of characters, but each packet period (56.0msec) never exceeds a series of 4 long (1.4msec) and 50 short (0.6msec) pulses. Assuming any combination of short or long pulses may be obtained due to encoding the worst case transmit duty cycle would be considered [(4x1.4msec) + (50x0.6msec)] per 56.0msec=63.6% duty cycle. Figure A through C show the characteristics of the pulse train for one of these functions.

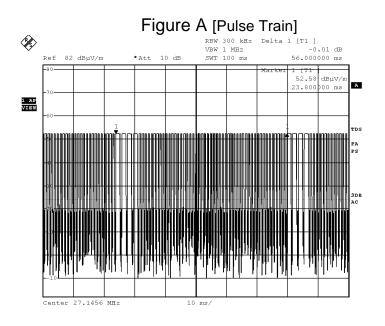

Remarks: -

Duty Cycle Correction = 20Log(0.636) = -3.9dB

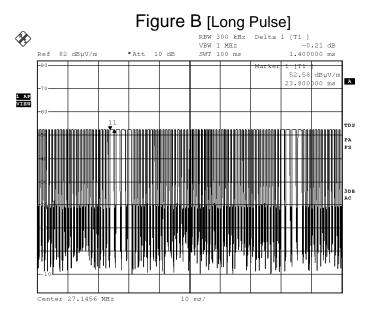

The following figures [Figure A to Figure C] show the characteristics of the pulse train for one of these functions.

This report is intended for your exclusive use.
