## Equipment Under Test [EUT]

### Description of Sample:

Product: Radio Control Toy Transmitter  
Model No.: G6DG41HH  
Power Supply: 3Vd.c. ("AAA" size battery x 2)

### Description of EUT Operation:

The Equipment Under Test (EUT) is a **NEW BRIGHT INDUSTRIAL CO., LTD** of Radio Control toy. The transmitter is 2 sticks transmitter and operating at 49.86MHz. The EUT continues to transmit buttons is being pressed, Modulation by IC, and type is pulse modulation.

The transmitter has different control:

1. Left stick – Forward and backward control
2. Right stick – left and right control

### Antenna Requirement (Section 15.203)

The EUT is use of a permanently antenna. The antenna consists of 35.0cm long signal wire. It is soldered on the PCB. The antenna is not replaceable or user serviceable. The requirement of S15.203 are met. There are no deviations or exceptions to the specifications.

## Test Results

### Radiated Emissions (Fundamental)

Test Requirement: FCC Part 15 Section 15.235

Test Method: ANSI C63.4

Test Date(s): 2014-01-02

Temperature: 15.0 °C

Humidity: 53.0 %

Atmospheric Pressure: 101.8 kPa

Mode of Operation: Transmission mode

Tested Voltage: 3Vd.c. ("AAA" size battery x 2)

### Test Method:

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, For battery operated equipment, the equipment tests shall be perform using new battery. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is place 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1m above the ground.

Location: The Roof, Westin Centre, 26 Hung To Road, Kwun Tong, Kowloon, Hong Kong

### Test Setup: Open Area Test Site

Note: Field Strength includes Antenna Factor and Cable Loss.

Receiver setting: RBW = 120KHz  
VBW = 120KHz

## TEST REPORT No.: (5214)003-0998

### 26dB Bandwidth of Fundamental Emission

Test Requirement: FCC 47 CFR 15.235  
Test Method: ANSI C63.4  
Test Date(s): 2014-01-02  
  
Temperature: 15.0 °C  
Humidity: 53.0 %  
Atmospheric Pressure: 101.8 kPa  
  
Mode of Operation: Transmission mode  
Tested Voltage: 3Vd.c. ("AAA" size battery x 2)

### Test Method:

The bandwidth is measured at an amplitude level reduced from the reference level by a specified ratio. The reference level is the level of the highest amplitude signal observed from the transmitter at the fundamental frequency. Once the reference level is established, the equipment is conditioned with typical modulating signal to produce the worst-case (i.e. the widest) bandwidth.

### Limits for 26dB Bandwidth of Fundamental Emission:

| Frequency<br>[MHz] | 26dB Bandwidth<br>[KHz] | Limits<br>[MHz]    |
|--------------------|-------------------------|--------------------|
| 49.8604            | 28.4                    | within 49.82-49.90 |

# TEST REPORT No.: (5214)003-0998

## Measurement Data

### Test Result of 26dB Bandwidth of Fundamental Emission: PASS

Date: 2.JAN.2014 15:55:14

## TEST REPORT No.: (5214)003-0998

### Duty Cycle Correction During 100msec:

Each function key sends a different series of characters, but each packet period (47.0sec) never exceeds a series of 4 long (1.6msec) and 40 short (0.6msec) pulses. Assuming any combination of short and long pulses maybe obtained due to encoding the worst case transmit duty cycle would be considered  $(4 \times 1.6\text{msec}) + (40 \times 0.6\text{msec})$  per 47.0msec = 64.7% duty cycle. Figure A through C shows the characteristics of the pulse train for one of these functions.

Remarks: -

Duty Cycle Correction =  $20\text{Log}(0.647) = -3.8\text{dB}$

The following figures [Figure A to Figure C] show the characteristics of the pulse train for one of these functions.

**TEST REPORT No.: (5214)003-0998**

**Figure A [Pulse Train]**

Date: 2.JAN.2014 15:55:56

**Figure B [Long Pulse]**

Date: 2.JAN.2014 15:56:29

TEST REPORT No.: (5214)003-0998

Figure C [Short Pulse]

Date: 2.JAN.2014 15:56:46

**TEST REPORT No.: (5214)003-0998**
