PRODUCT DESCRIPTION

The Model RD900WB is a high power wide band 900MHz transmitter using a proprietary digital modulation, that operates at 905 MHz, 911 MHz, 917 MHz, and 923 MHz.

TEST FACILITY AND EQUIPMENT LIST

FACILITIES

- Radiated ANSI C63.4 (FCC OET/55) open field 3 metre test range. This test range is protected from the cold and moisture by a non-conductive enclosure.
- Conducted 2.5m Anechoic Chamber

EQUIPMENT

Anritsu 2601A Spectrum Analyzer
Advantest R3261A Spectrum Analyzer
Hewlett-Packard RF generator # 8640 B with an 002 doubler
A.H. Systems biconical antenna; 20 MHz to 330 MHz
A.H. Systems log periodic antenna; 300 MHz to 1.8 GHz
Compliance Design P950 Preamp (16 dB) ... 25 MHz to 1.0 GHz

NOTE:

The Anritsu 2601A Spectrum Analyzer and the Advantest R3261A Spectrum Analyzer are calibrated annually, and that calibration is directly traceable to the National Research Council of Canada. (NRC) This equipment is only used by qualified technicians and only for the purpose of EMI measurements. The three metre test range has been carefully evaluated to the ANSI document C63.4 and will be remeasured for reflections and losses every three years.

ADDITIONAL TEST EQUIPMENT LIST

1. Spectrum Analyzer: HP 8591EM, S/N 3639A00995, Calibrated April 2002
2. Spectrum Analyzer: ANRITSU 2601A, S/N MT64544, Calibrated May 2002
3. Spectrum Analyzer: IFR AN940, S/N 635001039, Calibrated March 2002
4. Preamp: HP 8449B, S/N 3008A00378, Calibrated August 2002
5. Horn Antenna: Q-PAR 6878/24, S/N 1721, 1.5-18GHz
6. Line Impedance Stabilization Network.: Marstech, Cal. July 2002

15.107 (a) POWER LINE CONDUCTED INTERFERENCE

Requirements:

Frequency of Emission (MHZ)	Conducted Limit (dB μ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
37405	60	50

*Decreases with the logarithm of the frequency.

Test Procedure:

ANSI STANDARD C63.4-1992. using a 50 μ H LISN. Both lines were observed with the EUT transmitting. The bandwidth of the spectrum analyzer was 9KHz QP with an appropriate sweep speed. The ambient temperature of the EUT was 24°C with a humidity of 60%.

The spectrum was scanned from 0.15 to 30MHz.

Test Data:

The highest emission read for LINE was 38.17 dB μ V@ 0.21 MHz.

The highest emission read for NEUTRAL was 37.49 dB μ V@ 0.21 MHz.

The graphs on Exhibit D(1)-6 and -7 represent the emissions taken for this device.

Test Results:

Both lines were observed. The measurements indicate that the unit DOES appear to meet the FCC requirements for this class of equipment.

POWER LINE CONDUCTED EMISSIONS
MODEL RD900WB; NEUTRAL

15.247(a) 6 dB BANDWIDTH

Requirements:

The minimum 6 dB bandwidth shall be at least 500KHz.

Measurement Procedure:

1. Position the EUT without connection to Spectrum Analyzer (SA). Turn on the EUT and connect its antenna terminal to SA via a low loss cable and set it to any one measured frequency within its operating range and ensure that the SA is operated in its linear range.
2. Set RBW of SA to 100KHz and VBW to 1 MHz.
3. Capture the total emission using appropriate SA settings and then set the markers to measure the 6 dB total band using delta markers.
4. Print the bandwidth measurement.

Measurement Data:

Channel 1: Bandwidth is 3.25 MHz [Refer to Exhibit D(1)-9]
Channel 3: Bandwidth is 3.12 MHz [Refer to Exhibit D(1)-10]
Channel 4: Bandwidth is 2.87 MHz [Refer to Exhibit D(1)-11]

15.247(b) MAXIMUM PEAK OUTPUT POWER (Integral Antenna)**Requirements:**

The maximum peak output power of direct sequence systems shall not exceed 1 Watt. If transmitting antennas of directional gain greater than 6 dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

Measurement Data - Refer Exhibit D(1)-26 F. S. Data

1. MAX Field Strength (dipole) = 110 dB μ V/M (F.S.)
2. MAX Field Strength (dipole) = 0.316V/M (F.S.)

$$3. \quad F.S. = \sqrt{\frac{49.2 \times P_T(ERP)}{3}}$$

$$P_T(ERP) = \frac{(F.S.)^2 \times 9}{49.2}$$

$$P_T(ERP) = \frac{(0.316)^2 \times 9}{49.2} = 0.018W$$

$$P_T(ERP) = 18 mW$$

4. $P_T(EiRP) = P_T(ERP) \times 1.64 = 30mW$

15.247(d) PEAK POWER SPECTRAL DENSITY

Requirements:

For direct sequence systems, the peak power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

Measurement Procedure:

1. Position the EUT without connection to Spectrum Analyzer (SA). Turn on the EUT and connect its antenna terminal to SA via a low loss cable and set it to any one measured frequency within its operating range and ensure that the SA is operated in its linear range.
2. Set RBW = 3 kHz, SPAN = 30 kHz, VBW = OFF.
3. Measure the highest amplitude for channels 1, 3 and 4.
4. Plot graph.

Measurement Data: Refer to Exhibit D(1)-14 to -19 for plotted data

Channel 1: Maximum Peak Power Spectral Density is 7.50 dBm.
Channel 3: Maximum Peak Power Spectral Density is 7.81 dBm.
Channel 4: Maximum Peak Power Spectral Density is 7.50 dBm.

15.247(c) BANDWIDTH OF BAND EDGE MEASUREMENT

Requirements:

In any 100 kHz bandwidth outside these frequency bands, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power.

Measurement Procedure

1. Position the EUT without connection to Spectrum Analyzer (SA). Turn on the EUT and connect its antenna terminal to SA via a low loss cable and set it to any one measured frequency within its operating range and ensure that the SA is operated in its linear range.
2. Set RBW to 120 kHz and frequency span to 1000 kHz; VBW = none.
3. Measure the highest amplitude appearing on spectral display and set it as a reference level. Plot the graph with marking the highest point and edge frequency
4. Repeat the above procedures until all frequencies measured were complete.

Measurement Data - Refer Exhibit D(1)-21 to -22 for plotted data

- Channel 1: All emissions in this 100 kHz bandwidth are attenuated more than 28 dB from the carrier.
- Channel 4: All emissions in this 100 kHz bandwidth are attenuated more than 43 dB from the carrier.

15.105 and 15.247(c) SPURIOUS RF RADIATED EMISSIONS

Requirements:

In any 100 kHz bandwidth outside these frequency bands, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power.

Measurement Procedure:

1. The EUT was placed on a wooden table mounted on a turntable and was operating normally.
2. The search antenna was located 3 metres from the EUT.
3. The search antenna height (1-4 metres) and turntable (360°) were adjusted to all possible positions until the emission at each frequency was maximized.
4. The readings were noted and correction factor was added.

Measurement Data:

The closest spurious emission to the limit was 51.26 dB μ V/M @ 2754.30 MHz
[refer to Exhibit D(1)-26]

FCC RF EXPOSURE REQUIREMENTS

General Information

FCC ID: G95-RD900WB

Device Category:

EUT: Mobile per Part 2.1091

Environment: General Population/Uncontrolled Exposure

Operating Configurations and Exposure Conditions:

The EUT is normally operated at least 20 cm away from the human body.

Maximum Permissible Exposure Calculation: EUT

The minimum separation distance, for compliance with the limit, is calculated as follows:

$E (V/m) = \frac{\sqrt{30 \times P \times G}}{d}$	$\text{Power density: } P_d (mW/cm^2) = \frac{E^2}{3770}$
---	---

The limit for general population/uncontrolled exposure environment above 928 MHz is 0.62 mW/cm²

Separation Distance	Antenna Gain (dBi)	
	Integral	
Power EIRP (mW)	(in)	(cm)
30	0.8	2

RF Exposure Calculations

1. The limit for general population/uncontrolled environment at 928 MHz is 0.62 mW/cm².
2. The Field Strength $E \text{ V/M} = \sqrt{0.62 \times 3770} = 48.3$
3. The distance d to achieve the 0.62 mW/cm² power density is as follows

$$d = \frac{\sqrt{30 \times P \times G}}{E}$$
$$d = \frac{\sqrt{30 \times 0.030 \text{ W} \times 1}}{48.3} = \frac{0.9487}{48.3} = 1.96 = 2 \text{ cm}$$

Conclusion:

The device complies with the MPE requirements by providing a safe separation distance between the antenna, including any radiating structure, and any persons (human body excluding hands, wrists, ankles, and feet).

Proposed RF Exposure Safety Information to Include in User's Manual:

WARNING: For compliance with the RF exposure requirements regulated by the FCC (Federal Communications Commission), the transmitter's antennae are contained within the EUT enclosure, and an additional separation distance of more than eight inches (20 cm) shall be maintained between the transmitter base enclosure and any part of the user's body.
