

21.0193 (BEA-T1B) Modular Approval Information

FCC ID: G9B-210193

Requirements for equipment authorization:

1. The BEA-T1B Transceiver module working in the 24GHz frequency band has its own RF shielding. It has been designed and tested to comply with Part 15 of the Commission's Rules without any additional shielding.
2. The BEA-T1B Transceiver module has no internal power regulation. The specifications of the power circuitry into which the module is installed are listed in the 'installation instructions'.
3. The antenna is an integrated part of the module and cannot be removed nor replaced.
4. The BEA-T1B Transceiver module has been tested as a standalone module with power supply as specified into the datasheets. A report from a accredited laboratory is available.
5. The BEA-T1B Transceiver module has its own label and the device into which the module is installed will receive a label with the words : 'Contains FCC ID:G9B-210193'
6. When used in conformity with the 'installation instructions', the BEA-T1B Transceiver module will operate in compliance with section 15.245.
7. The BEA-T1B Transceiver module complies with any other applicable RF exposure requirements.
