Subject : Application for Modification of a 2.4GHz Cordless Telephone

To whom it may concern:

Enclosed is the Application for a 2.4GHz cordless telephone.

The subject model is currently granted under the FCC ID G9H27730. The current grant requires the statement "a minimum separation distance of 20cm must be maintained between the antenna of the base unit and the person" to be included in the installation manual.

After discussing this issue with Mr. Kwok Chan of FCC, it is our understanding that if the base station of the subject unit complies with the MPE requirements, the above mentioned statement needs not to be included in the installation manual.

Based on the test results of the attached test report, the maximum average output power is 11.2dBm or 13.2 mW at 3m which translates to 1.17×10^{-5} mW/cm². At this power level, it would require a distance of 1 cm before the limit of 1mW/cm² is attained. Therefore, we are requesting that this statement not be required in the installation manual.

Details are included in the attached exhibits.

In the event there are any questions, please do not hesitate to contact us.
