SUBJECT: FCC ID GIF-RFEPM

This document refers to the hand-held transmitter originally tested by Elite Electronic Engineering Inc., 1516 Centre Circle, Downers Grove, IL 60515-1082 on October 14 & 18, 2002.

The version of the hand-held transmitter tested on October 14 & 18, 2002 utilized a printed circuit board antenna. The printed circuit board antenna was connected via coaxial cable to the transmitter.

The hand-held transmitter has been modified to utilize a monopole antenna in place of the printed circuit board. This eliminates the need for the coaxial cable as well.

The hand-held transmitter which utilized the monopole antenna was tested by Elite Engineering Inc. on May 23, 2005. The only difference between the original hand-held transmitter and the modified hand-held transmitter is the antenna change described in this document. Based on the results of the test, a class 2 permissive change is being sought for this device.
