Columbia MD 21046

Subject: Request for Confidentiality

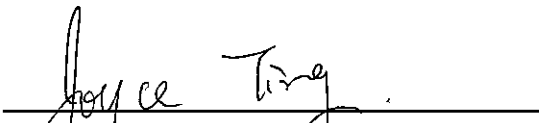

FCC ID: **GKR-TP00042AHB**

To Whom It May Concern:

For the new filing, we'd leverage the original conducted testing, report numbers 33376RRF.003 and 33376RRF.001, from an original module filing, FCC ID: VV7-MBMH5321, as they accurately represent test results under the new conditions described in the new application(s) which we incorporate the certified module as is in the tablet PC but change to lower gain antenna. The conducted test report is for measurements made on the full-size card version of the WAN module. Results are considered representative of the half-size card based on the minor differences in layout, otherwise both cards use the same components. This justification was also used when obtaining modular approval for the half-size card.

Thus, the original test report exhibit must, in its entirety, be the same as the test report contained in the original filing. A reference to only a section of an original test report, or uploading only a portion of an original test report, is not permitted.

Best Regards
