¥D!@¡G Additronal Information AN04T3939

WK,

I have reviewed the above referenced application and find the following information is needed in order to complete the application.

1. The document submitted for the Theory of Operation is for a device that complies with the 802.11 DTS requirements; however this device in the application is a 2402-2480MHz Bluetooth device. Please submit a corrected Theory of Operation exhibit. Please ensure that the information required for FCC 15.247(a)(1) and (h) are provided.

Ans #1: Attached is the corrected Theory of Operation.

2. The FCC ID number in the test report does not agree with the ID number in the remainder of the application. Please verify that the test report is for the correct device and correct the exhibit.

Ans #2: After verification, the test report is revised. Please refer to the following file.

3. The Users Manual includes a statement indicating that it has been tested for SAR; however a SAR test report has not been submitted with this application. If SAR testing has not been performed (which is not required for this device as configured) please remove statements in the Manual that would either state or imply that this configuration has been SAR tested.

Ans #3: The manual is revised Please refer to the following file.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.

Best regards,

Chris Harvey
