

Daniel,

1) Regarding SAR, Is testing done in the same PDA as originally approved with SAR (under FCC H8NWLF010 with WLAN only TXing)? If not, these results should have been considered here. Additionally, for purposes of documenting the BT RF exposure, this information would be necessary.

Thanks,

Tim

Hi Tim,

1. ADT tested SAR on 7525C, however, we tested on both 7525C and 7525S. So we evaluated it based on the original ADT 7525C data.

BR

Daniel
