

Hello Tim,

Please see the response as below:

1. The SAR reports for co-location with WLAN and WAN have been uploaded.  
Please check it.
2. It will be resolved later.
3. It is PC class II change for Bluetooth module.  
The BT module can be co-located with WLAN on the host. And it can also be co-located with WAN on the host.  
However, this application is not to cover co-location with WLAN and WAN together.

Please advice if there's any further comments?

Thank you very much.

Best Regards,

Ivonne
