RE: Psion Teklogix Inc

FCC ID: GM37525CMCS

These comments refer to the Part 15C portion of this filing.

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

- 1.) Kindly review pages 16-19 of this Test Report. The difference in fundamental is more than a 30dB difference between the 1MHz/1MHz and 1MHz/10Hz measurement settings. This seems unusually excessive. Was the hopping sequence stopped during the band edge measurement?
- 2.) Were spurious emissions due to intermodulation products investigated with both the Bluetooth transmitter and the GSM transmitter operating simultaneously?
- 3.) Since no Bluetooth antenna connector is provided and the conducted RF power is so low, kindly provide radiated field strength readings of the fundamental. I would like to confirm if the device was operating properly.

William H. Graff
President and Director of Engineering
