RE: FCC ID: GMLNPD1GW

Attention: Albert Ho

I have a few comments on this Application.

- 1 Power for transmitter testing and SAR must be within 0.3dB of each other. The power listed in the report is ERP at 27.733 for AMPS mode and 26.883 for CDMA. The power listed in the SAR report is 26dBm. IF there is a difference of power between the two, the SAR is to have the higher level. Please test the device at a level that is within 0.3dB of the measured value in the test report. Alternately, please explain why the variation is so large, i.e. ERP over conducted power – in which case you should provide the conducted power for the transmitter test report.)
- 2 No users manual has been provided. Please provide the users manual with the appropriate statements etc.

A handwritten signature in black ink that reads "Dennis Ward".

Dennis Ward
