731 Confirmation Number EA93994

Dear Mr. Czumak,

I am responding to your concerns relating to the Analog Module that can be purchased as an accessory for the 7190 Cellular Phone.

The FCC testing (including SAR) was performed with Hardware Version 1.95 in April, 1999. In January, 1999, we performed the SAR measurements on Hardware Version 1.92. Hardware Version 1.92 preceded 1.95, there was not a 1.93 or 1.94 build.

The following measurements were obtained in January:

Configuration	Network	Low Channel	Mid Channel	High Channel
7190 Alone	GSM	1.22	1.09	0.907
7190 with Analog Module	GSM	1.00	0.929	0.605
7191 with Analog Module	Analog	0.318	0.393	0.16

The above measurements were made at peak transmitter output and are in units of mW/g.

There were no hardware changes to the 7190 between Versions 1.92 to 1.95 that would have affected the operation of the Analog Module. The Analog Module that will be sold as an accessory for the 7190 is the same hardware that was approved by the FCC in December, 1997, FCC ID: LJPNRM-1X.

If you need more information please contact me at your earliest convenience.

Thanks  
Todd

P.S. I will register this attachment on the electronic filing site.
