Federal Communications Commission

Subject: RF Safety Exhibit

The NAT NTX403 FM Transceiver is a remote-mount transceiver designed to be installed in an aircraft away from the occupants, i.e. in an equipment bay. The associated antenna will be mounted on the aircraft skin and will be shielded from the occupants by the skin and structure of the aircraft. The NTX403 is controlled by a cockpit mounted control panel, and is a "push to talk" activated radio.

Per OET Bulletin 45, Page 41 (last paragraph), the NTX403 is therefore considered excluded from the requirement for routine evaluation of compliance to RF human exposure standards.

Sincerely,

John C. Carr
Certification Manager
