RE: Visonic Inc.

FCC ID: GSA5-BTC00433

After a review of the submitted information, I have a few comments on the above referenced Application. Depending on your responses, kindly understand there may be additional comments.

- 1) Much of the TX information in the manual was adjusted from 400 msec duration to 400 msec intervals with 4 transmissions. Also, previous comment regarding tamper conditions shows transmissions beyond the 1 second (1.412 second duration for the series of transmissions. Previously it appears that only tamper TX would last 1.412 sec, but now with revised manual all transmissions appears to follow this. Note that the FCC requirement is maximum of 1 second period to meet 15.231(e) transmissions. Additionally, the users manual was adjusted to show in motion and motionless also transmit at this duty cycle. To meet FCC requirements, it would appear that a maximum of 3 transmissions may occur. Currently the device does not appear to meet 15.231(e) requirements
