

MCT-212 RL Waterproof Wrist Transmitter

The MCT-212 RL is a miniature RF waterproof transmitter, designed for home health care signaling. All MCT-212 RL units are supplied with a wrist band and neck strap to be worn on the wrist or around the neck. It includes a built-in printed integral antenna (part of the PCB).

In the event of an emergency, help can be summoned at the press of the transmitter button. Upon pressing the transmit button, the Base Unit will sound and display simultaneously CALLING FOR HELP. This indicates that the transmitter is working properly. The LED lights during a transmission to indicate a good battery. If the LED flashes during a transmission, this means that the battery is low.

Anytime the MCT-212 RL is pressed when the battery is low, a trouble signal will automatically be sent to the Base Unit.
