WARNING

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

RF Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference including interference that may cause undesired operation of the device.

CANADIAN D.O.C. WARNING

This digital apparatus does not exceed the Class A limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n'émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la classe A prescrites dans le Réglement sur le brouillage radioélectrique édicte par le ministère des Communications du Canada.

GETTING STARTED

1

The Monarch® Sierra Sport2[™] 9460[™] printer is a portable, thermal-direct printer that prints on tags or labels.

Introduction

This chapter includes information about

- documentation.
- printer utilities
- unpacking the printer.
- installing the battery and battery information.
- connecting the communications cable.
- using the LCD screen and buttons.

Audience

The *Operator's Handbook* is for the person who prints and applies labels.

Documentation

The online version of the *Programmer's Manual* and the *RCL Programmer's Manual* can be downloaded free from Monarch's Web site (**www.monarch.com**) as an Adobe® Acrobat® Reader file.

The hard-copy version of the *System Administor's Guide* can be ordered by calling 1-800-543-6650. Ask for part number TC9460SA.

Printer Utilities

The Monarch® MPCL[™] Toolbox utilities are also available on our Web site and are free to download. This group of development utilities help you configure the printer, customize fonts, and download files.

Unpacking the Printer

After you unpack the printer, you may have (depending on your order):

- a 9460 printer
- one or two batteries
- an AC power adapter (supply) or none
- a hip/shoulder/hand strap or none

When unpacking, make sure you look through all of the packaging material for items.

Keep all packaging material in case you need to move or return the printer.

If any items are missing, contact Monarch® at the number listed on the back of this manual for replacement items.

Powering the Printer

There are two ways to power the printer:

- Using a battery. See "Installing the Battery" for more information.
- Using the optional AC power adapter. For more information about the AC power adapter, refer to the 9463 Operating Instructions included with the AC power adapter.

Installing the Battery

The battery can be installed with or without supplies loaded.

Make sure the battery is charged before using it.

- 1. Turn off the printer if you are changing batteries.
- Open the supply door by pushing down on the release buttons located on both sides of the printer. The supply door should swing open.

3. Insert the connector end of the battery into the printer.

- 4. Close the supply door until the release buttons click into place.
- 5. Turn on the printer by pressing and holding the button until the LCD screen comes on (about two seconds).

The display flashes printer version information, battery level, and then you will see:

Battery and Safety Information

- You must charge a battery before using it.
- The printer uses a 7.4V lithium-ion battery.

WARNING

Use only Monarch chargers (Monarch® 9461™ Single Station Charger or the Monarch® 9464™ Four Station Charger) designed for lithium-ion batteries when charging. The battery might explode if placed on a different charger.

- Charging time is approximately 1.5 to 3 hours.
- Take the battery out of the printer when storing the printer for long periods of time.
- The battery storage temperature is 40°F to 104°F (4°C to 40°C). Do not store a *fully charged* battery at temperatures greater than 104°F (40°C) for long periods of time. The battery may permanently lose charging capacity.
- Disposal information Do not throw in trash. Dispose according to your local regulations.

CAUTION

Do not disassemble, short circuit, heat above 80°C, or incinerate. The battery may explode.

The recommended temperature for charging is 20°C (68°F) to 25°C (77°F).

Connecting the Communications Cable

9-pin and 25-pin serial communication cables are available. For best results, use only Monarch® cables. See Appendix B, "Accessories & Options" for part number information.

1. Open the hinged cable door by loosening the two screws and lifting up on the door.

CAUTION

Do not use sharp objects around the printhead. This may damage the printer and require a service charge. 2. Plug the DB9 connector into the DB9 port.

3. Place the cable in the cable cavity.

4. Close the hinged cable door and tighten the screws.

To connect the optional AC power adapter, refer to the *9463 Operating Instructions* included with the AC power adapter.

Using the Display and Buttons

- Turns the printer on and off.
- Advances the supply or returns the display to the next higher menu.
- Three buttons for selecting options on the display.

Printing

The host sends online packets containing print jobs to the printer.

1. Turn on the printer by pressing and holding the limit button until the display turns on.

The display flashes printer version information, battery level, and then you will see:

2. Download a format and a batch.

For information on creating packets and downloading print jobs refer to the online version of the *Programmer's Manual* available on Monarch's Web site (www.monarch.com).

The printer prints either a strip of supplies or one at a time (on-demand mode).

3. Remove the printed supplies.

1-10 Getting Started

LOADING SUPPLIES

This chapter describes how to load supply for

- non-peel mode (prints on continuous strip of supply).
- peel mode (prints and separates the label from the liner).

Loading tips:

- Whenever you open and close the supply door, press the (*) button to calibrate the supply under the printhead.
- The printer may be **on** or **off** when loading supplies.

Loading for Non-Peel Mode

Use these instructions to load labels, tags, receipt paper, and linerless labels (supply without a liner). To print linerless labels, the printer needs to be setup with the linerless platen roller.

1. Open the supply door by pushing down on the release buttons on both sides of the printer. The supply door should swing open.

- 2. Remove the tape from a new roll of supply.
- **3.** Move the supply holder tabs to widen the supply holders. Insert a roll of supplies.

The supply should unwind as shown with the loose end of the supply feeding through the exit chute.

4. Pull out enough supply to lay across the exit chute.

- 5. Close the supply door until the release buttons click into place.
- 2-2 Loading Supplies

6. Press the (1) button to calibrate the supply under the printhead. If you receive a supply error, see Chapter 4, "Troubleshooting" for more information.

Tearing the Supplies

Tear the supply from the right or left using the tear edge as a guide.

Do not pull straight up on the supply. You may lose registration.

Loading for Peel Mode

You need label supply with a liner to use these instructions.

 Open the supply door by pushing down on the release buttons located on both sides of the printer. The supply door should swing open.

- 2. Remove the tape from a new roll of supply.
- **3.** Move the supply holder tabs to widen the supply holders. Insert a roll of supplies.

The supply should unwind as shown with the loose end of the supply feeding through the exit chute.

4. Pull out enough supply to lay across the exit chute.

5. Remove a couple of labels from the liner. Feed the supply under the peel bar.

The peel bar should be open, if not, push up on the release buttons located on both sides of the printer. 6. Close the supply door until the release buttons click into place.

The peel bar closes when the supply door clicks into place.

- 7. Lightly tug on the liner to remove the slack.
- 8. Press the (1) button once or twice to advance the labels and to calibrate the supply under the printhead. If you receive a supply error, see Chapter 4, "Troubleshooting" for more information.

The liner separates from the label.

CARE & MAINTENANCE

3

This chapter explains how to

- clean the printhead, platen roller, and the supply sensors.
- clear label jams.

CAUTION

Do not use sharp objects to clean the printhead. This may damage the printer and require a service charge.

Cleaning

The rate and frequency at which you print determines how often you must clean the printer.

You may need to clean the printhead and platen roller

- after using seven to ten (7-10) rolls of supplies.
- in extreme temperatures, humid conditions or a dirty environment.

- when you see voids in the print.
- after a label jam.

You may have to clean the supply sensors more often if you frequently receive supply error messages.

Use any of the following items to clean the printhead:

• A soft cloth moistened with isopropyl alcohol.

CAUTION

Use isopropyl alcohol on the interior areas only, never on the exterior.

• A Monarch Cleaning Pen (part number 114226).

To clean the printhead, platen roller, and supply sensors:

1. Turn off the printer by pressing and holding the limit button until the display is blank.

Do not use sharp objects to remove adhesive or label particles from the printhead area.

2. Open the supply door by pushing down on the release buttons on both sides of the printer. The supply door should swing open.

3. Lay the printer on its back.

 Clean the printhead with a clean soft cloth moistened with isopropyl alcohol, a cleaning pen, or a small brush.

CAUTION

The printhead is sensitive to static electricity, which can damage the printhead or reduce its life. Ground yourself by touching some metal before touching the printhead.

- 5. Clean the platen roller with a clean soft cloth moistened with isopropyl alcohol or a cleaning pen.
- **6.** Turn the platen roller with your finger to clean the entire surface.

7. Clean the on-demand and black mark sensor with a clean soft cloth or cotton swab moistened with isopropyl alcohol or a cleaning pen.

- 8. Reload the supply.
- **9.** Close the supply door until the release buttons click into place.
- **10.** Turn **on** the printer by pressing and holding the ⁽¹⁾ button until the display turns on.

Clearing Label Jams

When you are printing and jam occurs, you see a supply error message. To clear the jam:

- 1. Turn off the printer by pressing and holding the log button until the display is blank.
- 2. Open the supply door by pushing down on the release buttons on both sides of the printer. The supply door should swing open.
- 3. If necessary, remove the roll of supplies.
- 4. Remove the jammed supplies and reload the supply.
- 5. Close the supply door.
- 6. Turn on the printer by pressing and holding the D button until the display turns on.
- 3-4 Care and Maintenance

TROUBLESHOOTING

This chapter lists some of the common printer problems and their possible solutions. If these solutions do not work, call Monarch Service.

Problem	Solution		
Printer will not	Make sure the battery is fully charged.		
feed.	Make sure the supply cover is completely closed.		
	Make sure the supply is loaded properly.		
	Run the printer diagnostic tests. Refer to the <i>System Administrator's Guide</i> for more information.		
Printer will not	Make sure the battery is fully charged.		
print.	Make sure the supply cover is completely closed.		
	Clean the printhead.		
	Run the printhead diagnostics tests. Refer to the <i>System Administrator's</i> <i>Guide</i> for more information.		
Print has voids or is too light.	Make sure the battery is fully charged.		
	Make sure the supply cover is completely closed.		
	Make sure the supply is loaded properly.		
	Clean the printhead.		
	Run the printhead diagnostics tests. Refer to the <i>System Administrator's</i> <i>Guide</i> for more information.		
Printer turns off	Recharge the battery.		
while printing and/or the display goes blank.	Resend the format.		
	The maximum black to white print ratio for each label/tag is 30%. Check your format for unnecessary thick horizontal lines.		

Problem	Solution
Supply does not calibrate properly.	Check the on-demand, black mark, die cut, or non-indexed sensors. Refer to the <i>System</i> <i>Administrator's Guide</i> for more information. You may need a new sensor.

Common Errors

The following is a list of common printer errors you may receive. If you receive a message not listed here, see your System Administrator or call Technical Support at the number listed on the back of this manual.

Error	Description
025 Invalid Length	String length is outside the range 0 to 2710 .
101 Invalid/Missing	The format referenced by batch is not in memory.
409 Memory Full	The printer memory is full. Delete unnecessary formats or graphics from memory.
410 Parity	Parity mismatch. Check your parity settings at the printer and at the host.
411 Framing	Framing error (baud rate mismatch). Check your baud rate settings at the printer and at the host.
413 Overrun	Online receive queue is full. Check for a flow control problem.
611 Error Loading	Font, bar code, or density in the batch does not fit the format.
612 Invalid Data	The data in this line of the batch is either missing or does not match the format.
613 Invalid Data	Reference point off supply.
614 Invalid Data	Portion of field off supply or there may be an invalid character in the packet.

Error	Description
703 Check Supply	The printer sensed a calibration of different-sized black marks. Make sure the correct supply is loaded.
704 Check Supply	Printer has not sensed a supply mark within the specified number of inches or is out of supplies. Check the supply tracking, supply marks, black mark sensor position, and supply roll for binding. Press the button under the x icon to clear the error. Change supply.
750 Hot Head	Printhead is overheated. Press the button under the x icon to clear the error. Turn off the printer to let the printhead cool. If error persist, call Technical Support.
751 Check Supply	Printer did not sense a black mark when expected. For errors 751-753, Check the supply tracking, supply marks, black mark sensor position, and supply roll for binding. Press the () button under the x icon to clear the error and try to continue printing the batch. Change supply.
752 Check Supply	Printer sensed a mark in the wrong place. Press the () button under the x icon to clear the error.
753 Check Supply	Printer sensed a mark that is too long. Press the () button under the x icon to clear the error.
756 Load Supplies	Load supplies. Press the \textcircled{a} button under the x icon to clear the error.
757 Load Supplies	Load supplies (supply length mismatch), because the calibrated supply length differs by plus or minus .25 inches from the format. Press the (a) button under the x icon to clear the error.

Error	Description
758 Check Supply	Either the supply is not seen or the on-demand sensor is broken. Press the button under the x icon to clear the error. Check for a label jam, clear the supply path, or reload supplies. This error may occur if you remove a label too quickly in on-demand mode. The printer does not recalibrate after this error.
762 Low Battery	Recharge the battery. Press the (a) button under the x icon to clear the error.
763 Remove Label	Waiting to dispense label. Press the (a) button under the x icon to clear the error.
765 Check Printhead	The printhead has less than four bad dots. The printer can shift bar code fields to avoid bad dots. Press the (a) button under the x icon to clear the error and continue printing. Print a test label to confirm the number of bad dots.
768 Check Printhead	Printhead has more than 10 bad dots or is not connected. Connect the printhead. Press the (a) button under the x icon to clear the error.
791 Error Pending	The printer has an error pending. Turn off the printer. Wait 15 seconds and turn it back on. Resend the packets.

If you see a System Error Vector ## on the display, call Technical Support for instructions. If you need to return the printer to Monarch, use the original packaging (box and packing material).

SPECIFICATIONS

This appendix includes information about printer specifications and cable pin-outs.

Printer Specifications

Height:	5.8" (147 mm)	
Width:	3.6" (91 mm)	
Depth:	4.8" (122 mm)	
Weight without Battery or Supplies:	1.43 lb. (.65 kg)	
Weight with Battery:	1.7 lb. (.77 kg)	
Shipping Weight:	3.1 lbs. (1.4 kg) depends on options shipped with printer	
Display:	Graphical LCD with backlight	
Printhead:	1.89" (48 mm) 203 dpi (8 dots per mm)	
Memory:	512K RAM 1 MB (expandable to 2MB) Flash	
Power:	7.4V Lithium Ion battery	
Battery Life:	3500+ (889 m) of 25% black supplies	
Operating Limits:	40° to 104° F (5° to 40° C)	
	Storage -40° to 140° F (4° to 60° C)	

Printing Method:	Thermal Direct
Recommended Duty Cycle:	33% Duty Cycle (5 minutes out of 15 minutes time intervals). On-demand or intermittent printing has no restrictions.

Supply Specifications

Supply Types:	Labels (standard or linerless), tags or receipt paper
Supply Widths:	0.5" (13 mm) minimum 2.05" (51 mm) maximum
Supply Lengths:	.375" (9.5 mm) minimum 12.0" (305 mm) maximum
Maximum Print Area:	1.89" (48 mm) x 12" (305 mm)

Cable Pin-outs

ANSI/EIA-232-D		
Contact #	Circuit	Description
6	CC	DSR (Data Set Ready)
1	-	Reserved - Do not connect.
4	CD	DTR (Data Terminal Ready)
5	AB	Signal Ground
2	BB	Received Data (RXD)
3	BA	Transmitted Data (TXD)
8	СВ	Clear to Send (CTS)
7	CA	Request to Send (RTS)
9	-	No connect.

ACCESSORIES

This appendix lists the accessories and options that work with your printer and briefly describes them.

Use these part numbers when ordering an item. Call Monarch at the number listed on the back of this manual to order parts or supplies.

Accessory Items	Part Number
Single Station Battery Charger	M09461
Four Station Battery Charger	M09464
Spare Battery	120095
AC Power Supply	M09463
Communication Cable - DB9 to 9-pin	12029314
Communication Cable - DB9 to 25-pin	12029315
Standard Platen Roller	119951
Linerless Platen Roller	119952
Hip Strap	120295
Shoulder Strap	119998
Hand Strap	120277
Protective Boot	11997208
System Administrator's Guide	TC9460SA

Single Station Battery Charger

The Monarch® 9461[™] Single Station Battery Charger is designed for the Monarch® 9460[™] portable printer. It can charge one battery at a time. For more information about the battery, see Chapter 1, "Getting Started." For more information about the Single Station Battery Charger, refer to *9461 Operating Instructions* included with the charger.

Four Station Battery Charger

The Monarch® 9464[™] Four Station Battery Charger is designed for the Monarch® 9460[™] portable printer. It can charge the individual batteries or the printer with a battery installed. Full charging of a battery takes between 1.5 hours and 3 hours. For more information about the Four Station Charger, refer to the 9464 Operating Instructions included with the charger.

AC Power Adapter

The Monarch® 9463TM AC Power Adapter is designed for the Monarch® 9460TM portable printer. For more information about the AC power adapter, refer to 9463 *Operating Instructions* included with the AC power adapter.

Carrying Accessories

The following carrying accessories are available: Hip Strap and Clip, Shoulder Strap, and Hand Strap. Refer to your *Operating Instructions* provided with each strap for more information.

B-4 Accessories

PRINTER OPTIONS

This appendix lists the options that may be installed in your printer.

- IRDA
- Linerless
- RF Link

IRDA

Infrared Data Association - A wireless solution that uses light energy to transfer signals to and from the printer and a host. This system has narrow transmitting/ receiving signals and works best when stationed next to the host with no objects in the way. The maximum operating range is 3 feet. The system is automatically set-up when the printer (on or off) is next to the host.

Linerless

The printer is configured to use supplies without the backing paper. A linerless platen roller needs to be installed. If it is not installed, refer to the *Operating Instructions* (TC9460ACPROI) included with the platen roller.

RF Link

Radio Frequency Link - A radio device that transfers signals to and from the printer and a host. This wireless solution can transmit signals through non-metalic objects and has an operating range of about 10 feet. The system is automatically set-up when the radio device is turned on and sends a signal to the host.

RF Printing

When you turn on the printer, if you have the optional RF link installed, you will see:

The printer is ready to receive data.

If you have IrDA, you will see:

	IR-Ready	
II
