RE: Emissions Testing Performed On The Anti-Shoplifting Field Disturbance Transmitter,
Model: SP2

On February 18, 1999 we tested the Anti-Shoplifting Field Disturbance Transmitter, Model SP2 to determine if it was in compliance with the FCC Part 15 requirements, Subpart C, §15.223. A production version of the sample was received on February 18, 1999 was in good condition. We found that the unit met the Part 15 requirements when tested as received. Present during the testing from Ketec Inc. was Mr. Rich Frohbergh.

Fundamental and Harmonics (10 kHz to 30 MHz)

The fundamental transmit frequency was 12.5 dB below the FCC Part 15, Subpart C, §15.223 requirement at 8.2 MHz. All other emissions were at least 17.5 dB below the applicable limits (see Table 1).

Please note that an average factor of 20 dB was applied to the level of emissions for comparison to the FCC limits. Average factor calculation and corresponding plots are included in the average factor section of this report.

Spurious Emissions (30 MHz to 1 GHz)

The radiated emissions was 6 dB below the Part 15 requirements at 30.00 MHz. All other emissions were at least 8 dB below the applicable limits (see Table 2).

Line-Conducted Emissions

The worst-case line-conducted emissions were 25 dB below the Part 15 requirements at 24.95 MHz and 25.70 MHz. All other emissions were at least 37 dB below the applicable limits (see Table 3).

RE: Emissions Testing Performed On The Anti-Shoplifting Field
Disturbance Transmitter, Model: SP2

In summary, this report confirms that the SP2 is compliant with the FCC Part 15, Subpart C, §15.223 requirements when production units conform with the initial sample. Please address all questions and comments concerning this report to Andrew J. Bellezza, Staff Engineer/Emissions.

Introduction

The following is a description of the test procedure used by Intertek Testing Services in the measurements of transmitters operating under Part 15, Subpart C, General Requirements.

A. **Test Set-Up:** The test set-up and procedures described below are designed to meet the requirements of ANSI C63.4 (1992).

1. The test site is a wooden structure with a groundplane. The site has attenuation characteristics which meet the requirements of ANSI C63.4 (1992). Information on the site has been filed with the FCC as required by Rule §2.948. The address of the site is 70 Codman Hill Road, Boxborough, Massachusetts.
2. Power to the site is nominal line voltage of 117 V_{AC} and 230 V_{AC}, 60 Hz.
3. The equipment under test (EUT) is placed on a wooden turntable which is four feet in diameter and approximately one meter in height above the groundplane. During the radiated emissions test, the turntable is rotated and any cables leaving the EUT are manipulated to find the configuration resulting in maximum emissions. The antenna height and polarization are also varied during the search for maximum signal levels. The height of the antenna is varied from one meter to four meters.
4. Detector function for radiated emissions is in peak or quasi-peak mode. Average readings, when required, are taken by measuring the duty cycle of the equipment under test and subtracting the corresponding amount in dB from the measured peak readings according to the following formula:

$$\text{Averaging Factor in dB} = 20 \text{ LOG (duty cycle)}$$

INTERTEK TESTING SERVICES NA INC.

=

A. Test Set Up (cont'd)

The time period over which the duty cycle is measured is 100 msec. The worst-case (highest percentage on) duty cycle is used and described specifically in the data section. The duty cycle is measured by placing the spectrum analyzer in zero scan (receiver mode) and linear mode at maximum bandwidth (3 MHz at 3 dB down) and viewing the resulting time domain signal output from the analyzer on a Tektronix 465 Oscilloscope. The oscilloscope is used because of its superior time base and triggering facilities. A drawing or photograph of the worst-case duty cycle as detected in this manner is included as an attached page.

5. Antennas used below 1000 MHz was EMCO Biconolog Antenna. For measurements between 1000 MHz and 18000 MHz, where required, an Emco Double-Ridge Guide Horn Antenna was used. Alternately, for measurements above 1 GHz, an EMCO M/N 3115 Horn Antenna may have been used.

6. The field strength measuring equipment used included:

Spectrum Analyzer:	Hewlett Packard 8593A
--------------------	-----------------------

Preamplifier:	CDI P-950
---------------	-----------

LISN:	Solar Electronics
-------	-------------------

Additional equipment or comments:

Equipment is calibrated at frequent intervals.

INTERTEK TESTING SERVICES NA INC.

=

A. Test Set Up (cont'd)

7. The frequency range to be scanned is from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency, or 40 GHz, whichever is lower. For line-conducted emissions, the range scanned is 450 kHz to 30 MHz.
8. The EUT is warmed up for 15 minutes prior to the test. AC power to the unit is varied from 85% to 115% nominal and variation in the fundamental emission field strength is recorded. If battery powered, a new battery is used.
9. Conducted measurements were made as described in ANSI C63.4 (1992). An IF bandwidth of 10 kHz is used, and peak or quasi-peak detection is employed.
10. The IF bandwidth used for measurement of radiated signal strength was 100 kHz or greater below 1000 MHz. Where pulsed transmissions of short enough pulse duration warrant, a greater bandwidth is selected according to the recommendations of Hewlett Packard Application No. 150-2. A discussion of whether pulse desensitivity is applicable to this unit is included in this report. Above 1000 MHz, a bandwidth of 1 MHz is generally used.
11. Transmitter measurements are normally conducted at a measurement distance of three meters. However, to assure low enough noise floor in the forbidden bands and above 1 GHz (where no preamplifier is used), signals are acquired at a distance of one meter or less. All measurements are extrapolated to three meters using inverse scaling, but those measurements taken at a closer distance are so marked.

INTERTEK TESTING SERVICES NA INC.

=

A. **Test Set Up (cont'd)**

12. For measurements made in the 9 kHz to 30 MHz range, a distance of 30 meters was used unless a good signal-to-noise ratio could not be obtained. In that case, a closer distance was used and that distance is so marked in the data table.

B. This transmitter was found to meet the requirements of Part 15, Subpart C, Section §15.223.

1. The emissions of the transmitter will not exceed the levels defined in §15.223.
2. Line-conducted emissions will be below the requirements of Rule §15.207.
3. The device does not operate in any of the restricted bands listed in §15.205(a).

INTERTEK TESTING SERVICES NA INC.

C. Miscellaneous Information

1. **Manufacturer:** Ketec Inc.
2. **Grantee:** Ketec Inc.
3. **Model No.:** SP2
4. **Trade Name:** Ketec Inc.
5. **Serial No.:** ENG1
6. **Date of Test:** February 18, 1999
7. **Frequencies to which device can be tuned:** None
8. **Can customer tune device?** No
9. **Detailed description of operation pursuant to:** §15.223
10. **Applicable emissions limits:** §15.223, §15.209, §15.207
11. **Additional Comments:**

The transmitter was configured for testing in a typical fashion (as a customer would normally use it).

The worst case bit sequence was applied during test

INTERTEK TESTING SERVICES NA INC.

Measurements of Bandwidth

The plot on the following page shows the fundamental emission when modulated with a worst-case bit sequence. From the plot, the bandwidth is observed to be 790 kHz at 6 dBc. Please note the following:

Frequency:	<u>8.152 MHz</u>
Span:	<u>2 MHz</u>
RBW:	<u>9 kHz</u>
Bandwidth:	<u>790 kHz</u>

Derivation of Averaging Factor

Calculation of Averaging Factor.

FCC Part 15 of CFR 47 1997 Section 15.35(b) allows a maximum averaging factor of 20 dB when using a pulsed emission. The following calculation is presented to demonstrate the 20 dB factor:

PW = Transmitter Pulse width in microseconds

PR = Pulse Repetition Rate in milliseconds

PW = 1.5 usec

PR = 8.33 msec (120 Hz)

$$\begin{aligned}\text{Averaging Factor} &= 20 \log \frac{\text{PW}}{\text{PR}} = 20 \text{ LOG } \frac{(1.5 \times 10^{-6})}{(8.33 \times 10^{-3})} \\ &= 20 \text{ LOG } (1.801 \times 10^{-4}) \\ &= 75.0 \text{ dB}\end{aligned}$$

Since the averaging factor exceeds the 20 dB maximum allowed in 15.35(b), the applied averaging factor is 20 dB

INTERTEK TESTING SERVICES NA INC.

Article 1 - Services, LABORATORY will:

- 1.1 Act for CLIENT in a professional manner, using the degree of care and skill ordinarily exercised by and consistent with the standards of the profession.
- 1.2 Provide only those services that lie within the technical and professional areas of expertise of LABORATORY and which LABORATORY is adequately staffed and equipped to perform.
- 1.3 Perform all technical services in substantial accordance with the generally accepted laboratory testing principles and practices.
- 1.4 Promptly submit formal reports of technical services performed indicating, where applicable, compliance with specification or other contract documents. Such reports shall be complete and factual, citing where appropriate the technical services performed, methods employed, and values obtained.
- 1.5 Employ instrumentation which has been calibrated within a period not exceeding twelve (12) months from the time of use by devices of accuracy traceable to the National Institute of Standards and Technology of the United States Department of Commerce.
- 1.6 Consider all reports to be the confidential property of client, and distribute reports only to those persons, organizations or agencies designated by CLIENT or his authorized representative.
- 1.7 Retain all pertinent records relating to the services performed for a period of three (3) years following submission of the report or the suspension of manufacturing of product subject to follow-up services, whichever is later, during which period the records will be made available to CLIENT upon reasonable request.

Article 2 - Client's Responsibilities, CLIENT or his authorized representative will:

- 2.1 Provide LABORATORY with all plans, schematics, specifications, addenda, change orders, drawings and other information for the proper performance of technical services.
- 2.2 Designate a person to act as CLIENT's representative with respect to LABORATORY's services to be performed under this Agreement; such person or firm to have complete authority to transmit instructions, receive information and data, interpret and define CLIENT's policies and decisions with respect to the project and to order, at CLIENT's expense, such technical services as may be required.
- 2.3 Designate a person who is authorized to receive copies of LABORATORY's test reports.
- 2.4 To undertake the following:
 - (a) Secure and deliver to LABORATORY, without cost to LABORATORY, preliminary representative samples of that equipment proposed to require technical analysis, together with any relevant data.
 - (b) Furnish such labor and equipment needed by LABORATORY to handle samples at the LABORATORY and to facilitate the specified technical analysis.

Article 3 - General Conditions

- 3.1 LABORATORY, by the performance of services covered hereunder, does not in any way assume any of those duties or responsibilities customarily vested in the CLIENT's employees, or any other party, agency or authority.
- 3.2 LABORATORY shall not be responsible for acts or omissions of any other party or parties involved in the design, manufacture or maintenance of the equipment or the failure of any employee, contractor or subcontractor to undertake any aspect of equipment's design, manufacture or maintenance.
- 3.3 LABORATORY is not authorized to revoke, alter, relax, enlarge or release any requirement of the equipment's design, manufacture or maintenance unless specifically authorized by CLIENT or his authorized representative.
- 3.4 This Agreement may be terminated by either party on ten (10) days written notice or by mutual agreement. If this Agreement is terminated by either party, LABORATORY shall be paid in full for all services performed through the termination date, and the CLIENT shall be provided with a complete report of the results of technical analysis conducted prior to termination.
- 3.5 Neither CLIENT nor LABORATORY may delegate, assign, sublet or transfer his duties or interest in this Agreement without the written consent of the other party.
- 3.6 ***The only warranty made by LABORATORY in connection with its service performed hereunder is that it will use that degree of care and skill as set forth in Article 1.1 and 1.3 above. No other warranty, expressed or implied, is made or intended for services provided hereunder.***

- 3.7 Where the LABORATORY indicates that additional testing is advisable to obtain more valid or useful data, and where such testing has not been authorized in writing, CLIENT agrees to view such test reports as inconclusive and preliminary.
- 3.8 The LABORATORY shall supply technical service and prepare a report based solely on the sample submitted to the LABORATORY by the CLIENT. The CLIENT understands that application of the data to other devices is highly speculative and should be applied with extreme caution.

INTERTEK TESTING SERVICES NA INC.

- 3.9 The LABORATORY agrees to exercise ordinary care in receiving, preserving and shipping (F.O.B. Boxborough, Mass.) any sample to be tested, but assumes no responsibility for damages, either direct or consequential, which arise or are alleged to arise from loss, damage or destruction of the samples due to the act of examination, modification or testing, or technical analysis, or circumstances beyond LABORATORY's control.
- 3.10 The LABORATORY will hold samples for thirty (30) days after tests are completed, or until the CLIENT's outstanding debts to the LABORATORY are satisfied, whichever is later.
- 3.11 The client recognizes that samples of products subject to LABORATORY's review and test procedures may be damaged or destroyed.
- 3.12 The CLIENT recognizes that generally accepted error variances apply and agrees to consider such error variances in its use of test data.
- 3.13 It is agreed between LABORATORY and CLIENT that no distribution of any test, reports or analysis shall be made to any third party without the prior written consent of both parties. The content of all reports, analysis and tests is strictly confidential and shall not be released to any third party without the written consent of the other party.
- 3.14 The CLIENT acknowledges that all employees of LABORATORY operate under employment contracts with the LABORATORY, and CLIENT agrees not to solicit employment of such employees, or solicit information related to other clients from said employees.

Article 4 - Follow-Up Services (for listed products only)

- 4.1 If the product is found to be in compliance with the review and test requirements, it is agreed that CLIENT will abide by the Follow-Up Service Procedure.
- 4.2 It is understood and agreed by the CLIENT that the LABORATORY name or listing mark will not be applied or utilized until authorized representatives of LABORATORY have concluded the procedure set forth in Article 4.1.
- 4.3 All costs associated with the Follow-Up Service Procedure will be the responsibility of CLIENT. CLIENT's failure to pay these charges will result in the revocation of authorization to use the LABORATORY listing mark.

Article 5 - Insurance

- 5.1 LABORATORY shall secure and maintain throughout the full period of this Agreement sufficient insurance to protect it adequately from claims under applicable Workmen's Compensation Acts and from claims for bodily injury,

death or property damage as may arise from the performance of services under this Agreement.

- 5.2 The CLIENT hereby warrants that it has sufficient insurance to protect its employees adequately under applicable Workmen's Compensation Acts and for bodily injury, death or property damage as may arise from the acts of its employees pursuant to the Agreement.
- 5.3 No insurance, of whatever kind or type, which may be carried by LABORATORY is to be considered as in any way limiting any other party's responsibility for damages resulting from their operations or for furnishing work and materials related to the project.

Article 6 - Payment

- 6.1 CLIENT will pay LABORATORY for services and expenses. LABORATORY's invoices will be presented at the completion of its work or monthly and will be paid within thirty (30) days of receipt by CLIENT or his authorized representative.
- 6.2 LABORATORY shall be paid in full as described in Article 6.1 and, in addition, shall be paid in full for any services authorized orally or in writing by an employee or agent of the CLIENT pursuant to Article 2.2.

Article 7 - Extent of Agreement

The Agreement, including these Terms and Conditions and the Schedules attached hereto, represent the entire agreement between CLIENT and LABORATORY and supersedes all prior negotiations, representations or agreements, written or oral. The Agreement may be amended only in accordance with this Agreement or by written instrument signed by CLIENT and LABORATORY.

Article 8 - Collection

- 8.1 CLIENT shall pay LABORATORY interest in the amount of one and one half percent (1.5%) per month on amounts invoiced which are overdue. Invoices which are overdue are defined as those which remain unpaid more than thirty (30) days after presentation.
- 8.2 CLIENT agrees to pay LABORATORY all amounts incurred by LABORATORY in collecting on invoices which are overdue. Such amounts shall include, but shall not be limited to, reasonable attorneys' fees and court costs.
