This report is governed by, and incorporates http://www.bureauveritas.com/home/about-u report to or for any other person or entity, or with respect to the test samples identified he which a test sample was taken or any simila results thereof based upon the information th conformity are based on simple acceptance date of issuance of this report to notify us of such notice shall be in writing and shall spec unqualified acceptance of the completeness	by reference, the Conditions of Testing as posted at the date of issuance of this report at <u>s/our-business/cps/about-us/terms-conditions/</u> and is intended for your exclusive use. Any copying or replication of this use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely erein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from ro ridentical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the nat you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 60 days from any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that ifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your of this report, the tests conducted and the correctness of the report contents.

# **Release Control Record**

Issue No.	Description	Date Issued
RFBEKC-WTW-P22080972	Original release.	2022/10/13

#### **Certificate of Conformity** 1

Product:	Dongle
Brand:	ALIENWARE, DELL
Test Model:	UD2401t
Sample Status:	Engineering sample
Applicant:	LITE-ON Technology Corp.
Test Date:	2022/9/6 ~ 2022/9/27
Standards:	47 CFR FCC Part 15, Subpart C (Section 15.249)
	ANSI C63.10: 2013

The above equipment has been tested by Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's RF characteristics under the conditions specified in this report.

# 2 Summary of Test Results

47 CFR FCC Part 15, Subpart C (SECTION 15.249)					
FCC Clause	Test Item Result Remarks				
15.207	AC Power Conducted Emission	PASS	Meet the requirement of limit. Minimum passing margin is -17.16dB at 0.15391MHz.		
15.215	Channel Bandwidth Measurement	PASS	Meet the requirement of limit.		
15.209 15.249 (a) 15.249 (d)	Radiated Emission and Bandedge Measurement	PASS	Meet the requirement of limit. Minimum passing margin is -8.1dB at 2390.00MHz.		
15.203	Antenna Requirement	PASS	No antenna connector is used.		

Note: Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

#### 2.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

Measurement	Frequency	Expanded Uncertainty (k=2) (±)
AC Power Conducted Emissions	150 kHz ~ 30 MHz	3.00 dB
Conducted Emissions	9 kHz ~ 40 GHz	2.63 dB
Padiated Emissions up to 1 CHz	9kHz ~ 30MHz	2.38 dB
	30MHz ~ 1000MHz	5.62 dB
Radiated Emissions above 1 GHz	Above 1GHz	5.41 dB

# 2.2 Modification Record

There were no modifications required for compliance.

# 3 General Information

# 3.1 General Description of EUT

Product	Dongle
Brand	ALIENWARE, DELL
Test Model	UD2401t
Status of EUT	Engineering sample
Power Supply Rating	5Vdc from host equipment
Modulation Type	GFSK
Operating Frequency	2403MHz ~ 2480MHz
Number of Channel	78
Field Strength	80.2 dBuV/m (3m)
Antenna Type	Chip antenna with 0.7dBi gain
Antenna Connector	N/A
Accessory Device	USB Type C to C Connector
Data Cable Supplied	USB Type C cable (2m)

Note:

1. Due to radiated measurements are made and the antenna gain is already accounted for this device, so provide an antenna datasheet and/or antenna measurement report is not required. The antenna dimensions and pictures (include antenna wire length if have) are stated in EUT photo exhibit.

2. The above EUT information is declared by manufacturer and for more detailed features description, please refers to the manufacturer's specifications or user's manual.

# 3.2 Description of Test Modes

78 channels are provided to this EUT:

Channel	Freq. (MHz)						
0	2403	20	2423	40	2443	60	2463
1	2404	21	2424	41	2444	61	2464

# 3.3 Duty Cycle of Test Signal

Duty cycle correction factor = 20 log(Duty cycle) = 20 log(0.117) = -18.6dB

# 3.4 Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

ID	Product	Brand	Model No.	Serial No.	FCC ID	Remarks
Α.	Notebook	Lenovo	IdeaPad 5 15ITL05	N/A	N/A	Provided by Lab
В.	NB Adapter	Lenovo	PA-1450-55LL	N/A	N/A	Provided by Lab
C.	USB Type C to C Connector	LITEON	connector	N/A	N/A	Supplied by applicant

ID	Cable Descriptions	Qty.	Length (m)	Shielding (Yes/No)	Cores (Qty.)	Remarks
1.	USB Type C Cable	1	2.0	Y	0	Supplied by applicant
2.	DC cable	1	1.5	Ν	0	Provided by Lab

# 3.4.1 Configuration of System under Test

# 3.5 General Description of Applied Standards

The EUT is a RF Product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

### FCC Part 15, Subpart C (15.249)

ANSI C63.10-2013

All test items have been performed and recorded as per the above standards.

# 4 Test Types and Results

# 4.1 Radiated Emission and Bandedge Measurement

4.1.1 Limits of Radiated Emission and Bandedge Measurement

The field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following

Fundamental Frequency	Field Strength of Fundamental (millivolts/meter)	Field Strength of Harmonics (microvolts/meter)
902 ~ 928 MHz	50	500
2400 ~ 2483.5 MHz	50	500
5725 ~ 5875 MHz	50	500
24 ~ 24.25 GHz	250	2500

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits as below table, whichever is the lesser attenuation

Frequencies (MHz)	Field Strength (microvolts/meter)	Measurement Distance (meters)
0.009 ~ 0.490	2400/F(kHz)	300
0.490 ~ 1.705	24000/F(kHz)	30
1.705 ~ 30.0	30	30
30 ~ 88	100	3
88 ~ 216	150	3
216 ~ 960	200	3
Above 960	500	3

NOTE:

- 1. The lower limit shall apply at the transition frequencies.
- 2. Emission level (dBuV/m) = 20 log Emission level (uV/m).

3. For frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.

Notes:

1. The calibration interval of the above test instruments is 12/24 months. And the calibrations are traceable to NML/ROC and NIST/USA.

2. The test was performed in Linkou 966 Chamber 6 (CH 6).

3. Tested Date: 2022/9/6

#### 4.1.3 Test Procedures

#### For Radiated emission below 30MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter chamber room. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. Parallel, perpendicular, and ground-parallel orientations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Quasi-Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

#### NOTE:

1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 9kHz at frequency below 30MHz.

#### For Radiated emission above 30MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters (for 30MHz ~ 1GHz) / 1.5 meters (for above 1GHz) above the ground at 3 meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to quasi-peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1 GHz.
- f. The test-receiver system was set to peak and average detect function and specified bandwidth with maximum hold mode when the test frequency is above 1 GHz. If the peak reading value also meets average limit, measurement with the average detector is unnecessary.

#### Note:

- 1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120kHz for Quasipeak detection (QP) at frequency below 1GHz.
- 2. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz for Peak detection (PK) and Average detection at frequency above 1GHz. For fundamental and harmonic signal measurement, according to ANSI C63.10 section 7.5, the average value = peak value + duty factor. The duty factor refer to Chapter 3.3 of this report.
- 3. All modes of operation were investigated and the worst-case emissions are reported.

### 4.1.4 Deviation from Test Standard

No deviation.

# 4.1.5 Test Setup

For the actual test configuration, please refer to the attached file (Test Setup Photo).

# 4.1.6 EUT Operating Conditions

- a. Connected the EUT to Notebook PC.
- b. Set the EUT under transmission condition continuously at specific channel frequency.

# 4.1.7 Test Results

2. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

3. Tested Date: 2022/9/27

### 4.2.3 Test Procedures

- a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN). Other support units were connected to the power mains through another LISN. The two LISNs provide 50 ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
- c. The frequency range from 150kHz to 30MHz was searched. Emission levels under (Limit 20dB) was not recorded.
- **NOTE:** The resolution bandwidth and video bandwidth of test receiver is 9kHz for quasi-peak detection (QP) and average detection (AV) at frequency 0.15MHz-30MHz.

#### 4.2.4 Deviation From Test Standard

#### No deviation.

### 4.2.5 Test Setup

#### Note: 1.Support units were connected to second LISN.

For the actual test configuration, please refer to the attached file (Test Setup Photo).

### 4.2.6 EUT Operating Condition

Same as item 4.1.6.

# 4.3 Channel Bandwidth

# 4.3.1 Test Setup

### 4.3.2 Test Instruments

Description & Manufacturer	Model No.	Serial No.	Calibrated Date	Calibrated Until
Spectrum Analyzer R&S	FSV40	101544	2022/5/9	2023/5/8

**NOTE:** 1. The calibration interval of the above test instruments is 12 months. And the calibrations are traceable to NML/ROC and NIST/USA.

- 2. The test was performed in LK Oven
- 3. Tested Date: 2022/9/8

#### 4.3.3 Test Procedure

- a. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
- b. Turn on the EUT and connect it to measurement instrument. Then set it to any one convenient frequency within its operating range. Set a reference level on the measuring instrument equal to the highest peak value.
- c. Measure the frequency difference of two frequencies that were attenuated 20dB from the reference level. Record the frequency difference as the emission bandwidth.
- d. Repeat above procedures until all frequencies measured were complete.

4.3.4 Deviation from Test Standard

No deviation.

### 4.3.5 EUT Operating Condition

The software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel frequencies individually.

# 4.3.6 Test Results

Channel	Frequency (MHz)	20dB Bandwidth (MHz)		
0	2403	0.95		
38	2441	0.96		
77	2480	0.96		

# 5 Pictures of Test Arrangements

Please refer to the attached file (Test Setup Photo).

# Appendix – Information of the Testing Laboratories

We, Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, were founded in 1988 to provide our best service in EMC, Radio, Telecom and Safety consultation. Our laboratories are FCC recognized accredited test firms and accredited according to ISO/IEC 17025.

If you have any comments, please feel free to contact us at the following:
