Dear Helen,
Thank you very much for your information.

Question #1:
---> Sorry about that!
Attached please find Operational Description.pdf!

Best regards,

Eva Fan

Subject: ADVANCE SECURITY INC., FCC ID: H5OT34, Assessment NO.:
AN06T6318, Notice#1

Question #1: The operational description indicates: "The module will be
transmitting when the RF module data input is Hi; the module will stop
transmitting when the
RF module data input is Low". The test report indicates: "This EUT works
as a FM modulation. Signal HI will trigger FM OSC to generate a
915.004MHz frequency and signal LOW will trigger FM OSC to generate a
914.996MHz frequency. It is only 0.008MHz deviation, so that there is no
duty cycle on it." Please confirm whether the RF module data input Hi"
equals signal HI stated in the report; the RF module data input Low

equals signal LOW stated in the report. If the answer is yes, please clarify whether the device is still transmitting RF signal when the signal is low. The test report contradicts the operational description on this. You may need to update the relevant document.

Best Regards,
Helen Zhao

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
