

Declaration

It is hereby declared that the BT/SD Board with the FDD ID: H5P-FC200BTSD use only DH1 packet and prevent the use of any other packet type as following;

- (1) The BT/SD Board is designed for TOPCON's Field Controllers that is a Microsoft Windows CE. Based PDA.
- (2) It is true that the Bluetooth Module installed in the BT/SD Board could support DH3 and DH5 packet if the corresponding command was sent from host devices. However the BT/SD Board is designed for TOPCON internal use. Its structure is specific to TOPCON's Field Controllers whose Bluetooth application program only supports DH1. In addition, there doesn't exist any setup function to change packet type of Bluetooth Module from DH1 in TOPCON's Field Controllers.
- (3) If the third parties should try to make their own application program for TOPCON's Field Controllers in order to use DH3 and/or DH5 packet, they couldn't because the technical information is kept secret internally in TOPCON.
- (4) Thus the BT/SD Board can be used only DH1 packet..
