TEST REPORT

For

Rotating Laser

In conformity with

FCC CFR 47 Part15 (October 1, 2009) / RSS-210 Issue 8, RSS-Gen Issue 3

Model: RL-SV2S

FCC ID/ IC Certification No.: H5P-RLSV / 6050A-RLSV

Test Item: Rotating Laser (For operation within the bands 2400-2483.5MHz radio equipment)

Report No: RY1106J10R1

Issue Date: June 10, 2011

Prepared for

TOPCON CORPORATION 75-1, Hasumura-cho, Itabashi-ku, TOKYO, JAPAN

Prepared by

RF Technologies Ltd. 472, Nippa-cho, Kohoku-ku, Yokohama, 223-0057, Japan Telephone: +81+(0)45- 534-0645 FAX: +81+(0)45- 534-0646

This report shall not be reproduced, except in full, without the written permission of RF Technologies Ltd. The test results in this report apply only to the sample tested. RF Technologies Ltd. is managed to ISO17025 and has the necessary knowledge and test facilities for testing according to the referenced standards.

1 General information

1.1 Product description

| Test item | : Rotating Laser (For operation within the bands 2400-2483.5MHz radio equipment) |
|--------------------------------|---|
| Manufacturer | : TOPCON CORPORATION |
| Address | : 75-1, Hasunuma-cho, Itabashi-ku, TOKYO, JAPAN |
| Model | : RL-SV2S |
| FCC ID | : H5P-RLSV |
| IC Certification No | : 6050A-RLSV |
| Serial numbers | : E90061 (RL-SV2S for radiated) |
| | 9E0048 (RL-SV2S for conducted) |
| Fundamental Operated Frequency | : Tx/Rx Freq. (2401 MHz – 2479.75 MHz) |
| Oscillator frequencies | : 26MHz, 20MHz |
| Type of Modulation | : GFSK |
| RF Output Power | : 0.614 mW (measured at the antenna terminal) |
| Antenna Gain | : 1.84 dBi |
| Receipt date of EUT | : May 24, 2011 |
| Nominal power source voltages | : DC 5 V |

1.2 Test(s) performed/ Summary of test result

| Test specification(s) | : FCC CFR 47. Part 15 (October 1, 2009) / RSS-210 Issue 8, RSS-Gen Issue 3 |
|------------------------|--|
| Test method(s) | : ANSI C63.4: 2003 |
| Test(s) started | : May 27, 2011 |
| Test(s) completed | : June 10, 2011 |
| Purpose of test(s) | : Grant for Certification of FCC / IC |
| Summary of test result | : Complied |

Note: The above judgment is only based on the measurement data and it does not include the measurement uncertainty. Accordingly, the statement below is applied to the test result.

The EUT complies with the limit required in the standard in case that the margin is not less than the measurement uncertainty in the Laboratory.

Compliance of the EUT is more probable than non-compliance is case that the margin is less than the measurement uncertainty in the Laboratory.

1.3 Test facility

The Federal Communications Commission has reviewed the technical characteristics of the test facilities at **RF Technologies Ltd.**, located in 472, Nippa-cho, Kohoku-ku, Yokohama, 223-0057, Japan, and has found these test facilities to be in compliance with the requirements of 47 CFR Part 15, section 2.948, per October 1, 2007. The description of the test facilities has been filed under registration number 319924 at the Office of the Federal Communications Commission. The facility has been added to the list of laboratories performing these test services for the public on a fee basis.

The list of all public test facilities is available on the Internet at http://www.fcc.gov.

Registered by Voluntary Control Council for Interference by Information Technology Equipment (VCCI) Each registered facility number is as follows; Test site (Semi Anechoic chamber 3m) R-2393 Test site (Shielded room) C-2617

Registered by Industry Canada (IC) Each registered facility number is as follows; Test site No.1 (Semi Anechoic chamber 3m): 6974A-1

Accredited by **National Voluntary Laboratory Accreditation Program** (NVLAP) for the emission tests stated in the scope of the certificate under Certificate Number 200780-0

This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

NVLAP LAB CODE 200780-0

1.4 Measurement uncertainty

The treatment of uncertainty is based on the general matters on the definition of uncertainty in "Guide to the expression of uncertainty in measurement (GUM)" published by ISO. The Lab's uncertainty is determined by referring UKAS Publication LAB34: 2002 "The Expression of Uncertainty in EMC Testing" and CISPR16-4-2: 2003 "Uncertainty in EMC Measurements".

The uncertainty of the measurement result in the level of confidence of approximately 95% (k=2) is as follows;

RF Conducted emission $(30MHz - 26GHz): \pm 0.9dB$ Conducted emission $(10kHz - 30MHz): \pm 1.9 dB$ Radiated emission $(9 kHz - 30MHz): \pm 2.8 dB$ Radiated emission $(30MHz - 1000MHz): \pm 5.9 dB$ Radiated emission $(1.0GHz - 18.0GHz): \pm 5.8 dB$ Radiated emission $(18.0GHz - 26.0GHz): \pm 5.9 dB$

1.6 Setup of equipment under test (EUT)

1.6.1 Test configuration of EUT

Equipment(s) under test:

| | Item | Manufacturer | Model No. | Serial No. | Remark |
|----|----------------|--------------------|-----------|------------|-----------|
| A1 | Rotating Laser | TOPCON CORPORATION | RL-SV2S | E90061 | For |
| | | | | | Radiated |
| A2 | Rotating Laser | TOPCON CORPORATION | RL-SV2S | 9E0048 | For |
| | | | | | Conducted |

Support Equipment(s):

| | Item | Manufacturer | Model No. | Serial No. |
|---|------------|--------------------|-----------|------------|
| В | AC adaptor | TOPCON CORPORATION | AD-15 | - |

Connected cable(s):

| No. | Item | Identification (Manu.e.t.c) | Shielded | Ferrite Core | Connector Type Shielded | Length (m) |
|-----|----------------|--------------------------------|----------|-----------------|----------------------------|---------------|
| | | | YES / NO | YES / NO | YES / NO | |
| 1 | DC power cable | TOPCON CORPORATION | NO | NO | NO | 2.8 |

1.6.2 Operating condition:

Operating mode:

- The EUT was tested under the following test mode prepared by the applicant:
- (1-1) GFSK, Max continuous transmission at hopping off (2401MHz)
- (1-2) GFSK, Max continuous transmission at hopping off (2440.25MHz)
- (1-3) GFSK, Max continuous transmission at hopping off (2479.75MHz)
- (2-1) Continuous transmission at hopping on
- (3-1) Continuous Receiving (2401MHz)
- (3-2) Continuous Receiving (2440.25MHz)
- (3-3) Continuous Receiving (2479.75MHz)

1.6.3 Setup diagram of tested system:

AC 120V / 60Hz

1.7 Equipment modifications

No modifications have been made to the equipment in order to achieve compliance with the applicable standards described in clause 1.2.

1.8 Deviation from the standard

No deviations from the standards described in clause 1.2.

2 Test procedure and test data

2.1 Occupied Bandwidth (20 dB / 99%)

Test setup

Test setup is the following drawing. The antenna port of EUT was connected to the spectrum analyzer.

Test procedure

Measurement procedures were implemented according to the method of ANSI C63.4: 2003 clauses 13.1.7. The EUT antenna port connected to the spectrum analyzer. The RBW is set to \geq 1% of the 20 dB bandwidth bandwidth. The VBW is set to 3 times of the RBW. The sweep time is coupled appropriate.

Limitation

There are no limitations. The measurement value is used to calculation of the limitation of the channel separation and the emission designator.

Test equipment used (refer to List of utilized test equipment)

20dB Bandwidth

Temperature: 21 °C Humidity: 65 % Atmos. Press: 1014 hPa

99% Occupied Bandwidth

2.2 Hopping Carrier Frequency Separation

Test setup

Test setup is the following drawing. The antenna port of EUT was connected to the spectrum analyzer.

Test procedure

The EUT antenna port connected to the spectrum analyzer. The RBW is set to more than 1% of its span. The VBW is set to more than RBW. The sweep time is coupled appropriate.

Limitation

15.247(a)(1) frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

Test equipment used (refer to List of utilized test equipment)

| SA06 | CL23 | | |
|------|------|--|--|

Test results – comply with the limitation

| Operating Mode | Measured Frequency | Two-third of | Frequency Separation |
|----------------|--------------------|--------------------------|----------------------|
| Operating Mode | (MHz) | the 20dB bandwidth (MHz) | (MHz) |
| GFSK | 2401.5 | 0.297 (worst case) | 0.5 |

Tested Date: June 3, 2011

Operating mode: GFSK

Temperature: 21 °C Humidity: 65 % Atmos. Press: 1014 hPa

2.3 Number of Hopping Channel

Test setup

Test setup is the following drawing. The antenna port of EUT was connected to the spectrum analyzer.

Test procedure

The EUT antenna port connected to the spectrum analyzer. The RBW is set to more than 1% of its span. The VBW is set to more than RBW. The sweep time is coupled appropriate. The span is set to cover the authorized band. The analyzer is set to MAX HOLD. The EUT is hopping operation.

Limitation

15.247(a) (1) (iii) (iii) Frequency hopping systems in the 2400-2483.5 MHz band shall use at least 15 channels.

Test equipment used (refer to List of utilized test equipment)

| SA06 | CL23 | | |
|------|------|--|--|
| | | | |

Test results – Comply with the limitation Hopping channel: 22 channels

Tested Date: June 3, 2011

Temperature: 21 °C Humidity: 65 % Atmos. Press: 1014 hPa

Operating mode: GFSK

2.4 Average Time of Occupancy

Test setup

Test setup is the following drawing. The antenna port of EUT was connected to the spectrum analyzer.

Test procedure

The EUT antenna port connected to the spectrum analyzer. The RBW is set to 1 MHz. The VBW is set to more than RBW. The sweep time is coupled appropriate. The span is set to 0 MHz and single sweep with video triggered. The EUT is hopping operation.

The average time of occupancy within the 8.8 seconds (22 channels * 0.4) is calculated as follows in accordance with formula;

(average time of occupancy) = (pulse width)*(Hopping rate:3.64[hop/sec]) / 22 * 8.8

Limitation

15.247(a)(1)(iii) The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed.

Test equipment used (refer to List of utilized test equipment)

| SA06 | CL23 | | |
|------|------|--|--|
| | | | |

Test results – comply with the limitation.

| Operating Mode | Frequency [MHz] | Pulse width (msec) | Time of occupancy (msec) |
|----------------|-----------------------------|-----------------------|-----------------------------|
| GFSK | 2401.00 (Low channel) | 173.5 | 252.6 |
| | 2440.25 (Middle channel) | 175.2 | 255.1 |
| | 2479.75 (High channel) | 175.8 | 256.0 |

Tested Date: June 3, 2011

Operating mode: GFSK

Temperature: 21 °C Humidity: 65 % Atmos. Press: 1014 hPa

2.5 Peak Output Power

Test setup

Test setup is the following drawing. The antenna port of EUT was connected to the spectrum analyzer.

Test procedure

The EUT antenna port connected to the spectrum analyzer. The RBW is set to the greater than 20dB bandwidth. The VBW is set to three times of RBW. The sweep time is coupled appropriate. The span is set to cover the carrier output spectrum. The analyzer is set to MAX HOLD. The EUT is set measured transmission channel under hopping off mode.

Limitation

15.247(a) (1) Frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW(21dBm).

Test equipment used (refer to List of utilized test equipment)

| SA06 | CL23 | | |
|------|------|--|--|

Test results – comply with the limitation.

| Operating Mode | Transmission Channel (Frequency: MHz) | Cable loss (dB) | Output power (dBm) [Reading] | Output power (dBm) [Result] | Output power (mW) [Result] |

| | Low (2401.00) | 0.30 | -2.42 | -2.12 | 0.61 |
| GFSK | Middle (2440.25) | 0.30 | -2.64 | -2.34 | 0.58 |
| | High (2479.75) | 0.30 | -2.85 | -2.55 | 0.56 |

Tested Date: June 3, 2011

2.6 Conducted Spurious Emissions (Antenna Port)

Test setup

Test setup is the following drawing. The antenna port of EUT was connected to the spectrum analyzer.

Test procedure

The EUT antenna port connected to the spectrum analyzer. The RBW is set to 100 kHz. The VBW is set to 300 kHz. The sweep time is set to the coupled. The spectrum is cheated from 30 MHz to 26 GHz. The EUT is set measured transmission channel under hopping off mode.

Limitation

15.247(d) In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits.

Test equipment used (refer to List of utilized test equipment)

| SA06 CL23 |
|-----------|
|-----------|

Test results – comply with the limitation.

There were no conducted spurious emissions with levels of more than 20 dB below the applicable limit.

Tested Date: June 3, 2011

Restricted Band Edge

2.7 Transmitter Radiated spurious emissions

Test setup

Test setup was implemented according to the method of ANSI C63.4: 2003 clause 6 "General requirements for EUT equipment arrangements and operation", clause 8.2 and Annex H.3 "Radiated emission measurements setup".

Test procedure

Measurement procedures were implemented according to the method of ANSI C63.4: 2003 clauses 8.2. The EUT is place on a non-conducted table which is 0.8m height from a ground plane and the measurement antenna to EUT distance is 3 meters. The turn table is rotated for 360 degrees to determine the maximum emission level. In the frequency range of 9 kHz to 30 MHz, a calibrated loop antenna was positioned with its plane vertical at the distance 3m from the EUT with an extrapolation of corrected distance factor and rotated about its vertical axis for maximum response at each azimuth about the EUT. For certain applications, the loop antenna also needs to be positioned horizontally. The center of the loop shall be 1 m above the ground.

In the frequency above 30 MHz, the antenna height scanned between 1m and 4m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations.

EUT is placed at three different orientations (X, Y and Z axis) in order to find the worst orientation. The spectrum analyzer and receiver is set to the followings;

| Below 30 MHz: | RBW=10 kHz, VBW= 30 kHz Final measurement is carried out with a receiver RBW of 9 kHz (QP) |
|------------------------|---|
| Between 30 - 1000 MHz: | RBW=100 kHz, VBW= 300 kHz Final measurement is carried out with a receiver RBW of 120 kHz (QP) |
| Above 1000 MHz: | Peak measurement- RBW=1 MHz, VBW= 1 MHz Average measurement – RBW=1 MHz, VBW=10 Hz |

Applicable rule and limitation

§15.205 restricted bands of operation

Except as shown in paragraph 15.205 (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

| MHz | MHz | MHz | GHz |
|---------------------|-----------------------|-----------------|---------------|
| 0.090 - 0.110 | 16.42 - 16.423 | 399.9 - 410 | 4.5 - 5.15 |
| 0.490 - 0.510 | 16.69475 - 16.69525 | 608 - 614 | 5.35 - 5.46 |
| 2.1735 - 2.1905 | 16.80425 - 16.80475 | 960 - 1240 | 7.25 - 7.75 |
| 4.125 - 4.128 | 25.5 - 25.67 | 1300 - 1427 | 8.025 - 8.5 |
| 4.17725 - 4.17775 | 37.5 - 38.25 | 1435 - 1626.5 | 9.0 - 9.2 |
| 4.20725 - 4.20775 | 73 - 74.6 | 1645.5 - 1646.5 | 9.3 - 9.5 |
| 6.215 - 6.218 | 74.8 - 75.2 | 1660 - 1710 | 10.6 - 12.7 |
| 6.26775 - 6.26825 | 108 - 121.94 | 1718.8 - 1722.2 | 13.25 - 13.4 |
| 6.31175 - 6.31225 | 123 - 138 | 2200 - 2300 | 14.47 - 14.5 |
| 8.291 - 8.294 | 149.9 - 150.05 | 2310 - 2390 | 15.35 - 16.2 |
| 8.362 - 8.366 | 156.52475 - 156.52525 | 2483.5 - 2500 | 17.7 - 21.4 |
| 8.37625 - 8.38675 | 156.7 - 156.9 | 2690 - 2900 | 22.01 - 23.12 |
| 8.41425 - 8.41475 | 162.0125 - 167.17 | 3260 - 3267 | 23.6 - 24.0 |
| 12.29 - 12.293 | 167.72 - 173.2 | 3332 - 3339 | 31.2 - 31.8 |
| 12.51975 - 12.52025 | 240 - 285 | 3345.8 - 3358 | 36.43 - 36.5 |
| 12.57675 - 12.57725 | 322 - 335.4 | 3600 - 4400 | (1) |

15.205(b) except as provided in paragraphs (d) and (e), the field strength of emissions appearing within these frequency bands shall not exceed the limits shown in Section 15.209. At frequencies equal to or less than 1000 MHz, compliance with the limits in Section 15.209 shall be demonstrated using measurement instrumentation employing a CISPR quasi-peak detector. Above 1000 MHz, compliance with the emission limits in Section 15.209 shall be demonstrated based on the average value of the measured emissions. The provisions in Section 15.35 apply to these measurements.

15.209(a) Except as provided elsewhere in this Subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table

| - $ -$ | U | |
|---------------|----------------|----------------------|
| Frequency | Field Strength | Measurement Distance |
| (MHz) | (uV/m) | (m) |
| 0.009 - 0.490 | 2400/F (kHz) | 300 |
| 0.490 - 1.705 | 24000/F (kHz) | 30 |
| 1.705 - 30.0 | 30 | 30 |
| 30 - 88 | 100 | 3 |
| 88 – 216 | 150 | 3 |
| 216 - 960 | 200 | 3 |
| Above 960 | 500 | 3 |

In the emission table above, the tighter limit applies at the band edges.

The level of any unwanted emissions from an intentional radiator operating under these general provisions shall not exceed the level of the fundamental emission.

The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz.

Radiated emission limits in the above bands are based on measurements employing an average detector.

Test results - Complied with requirement.

Test Data

2.7.1 Below 30 MHz

Test equipment used (refer to List of utilized test equipment)LP01CL11TR06AC01(EM)

Tested Date: June 6, 2011

Temperature: 22 °C Humidity: 63 % Atmos. Press: 1007 hPa

Result

There is no spurious emission with levels of more than 20 dB below the applicable limit or floor noise.

2.7.2 Between 30 – 1000 MHz

Test equipment used (refer to List of utilized test equipment)

Calculation method

The Correction Factors and RESULT are calculated as followings.

Correction Factor [dB/m] = Antenna Factor [dB/m] + Cable loss [dB] – GAIN [dB]

RESULT [dBuV/m] =READING [dBuV] + Correction Factor [dB/m]

Sample calculation at 7203.000 MHz, horizontal, average result as follow:

Result [dBuV/m] = Reading + C.F = 41.3 + 7.1 = 48.4Margin = Limit - Result = 53.9 - 48.4 = 5.5 [dB]

2.8 Transmitter AC power line conducted emissions

Test setup

Test setup was implemented according to the method of ANSI C63.4: 2003 clause 6 "General requirements for EUT equipment arrangements and operation" and Annex H.1 "AC power line conducted emission measurements setup".

Test procedure

Measurement procedures were implemented according to the method of ANSI C63.4: 2003 clauses 7, clause 13.1.3 and Annex H.2 "AC power line conducted emission measurements".

Exploratory measurements were used the spectrum analyzer to identify the frequency of the emission that has the highest amplitude relative to the limit by operating the EUT in a range of typical modes of operation, cable positions, and with a typical system equipment configuration and arrangement.

Final ac power line conducted emission measurements were performed based on the exploratory tests. The EUT cable configuration and arrangement and mode of operation that produced the emission with the highest amplitude relative to the limit are selected for the final measurement.

When the measurement value is grater than average limitation the average detection measurements were performed.

Applicable rule and limitation

§15.207 (a) AC power line conducted limits

| Frequency of Emission (MHz) | Conducted L | Limit (dBuV) |
|-----------------------------|-------------|--------------|
| Frequency of Emission (WHZ) | Quasi-peak | Average |
| 0.15-0.5 | 66 to 56 * | 56 to 46 * |
| 0.5-5 | 56 | 46 |
| 5-30 | 60 | 50 |

* Decreases with the logarithm of the frequency.

The lower limit applies at the band edges.

Operating mode: Continuous Communication (GFSK, 2401MHz, Worst configuration)

The power line conducted emission voltage is calculated by adding the LISN factor and Cable loss attenuation from the measured reading. The calculation is as follows:

 $\begin{aligned} Result = Reading + C. F \\ where \quad C.F = LISN \ Factor + Cable \ Loss \quad [dB] \end{aligned}$

Sample calculation at 0.17723 MHz AV result as follow:

Result [dBuV] = Reading + C.F = 19.4 + 10.1 = 29.5 [dBuV] Margin = Limit - Result = 54.6 - 29.5 = 25.1 [dB]

Graphical express of test result (0.15 MHz-30MHz)

AC Power line conducted emission. (Phase Vb)

2.9 Receiver Radiated spurious emissions

Test setup - Same as clause 2.7

Test procedure - Same as clause 2.7

Applicable rule and limitation at 3m

§15.109 radiated emission limitation

| Frequency | Measurement Distance | Field Strength | Field Strength |
|-----------|----------------------|----------------|----------------|
| (MHz) | (m) | (uV/m) | (dBuV/m) |
| 30 - 88 | 3.0 | 100 | 40.0 |
| 88 - 216 | 3.0 | 150 | 43.5 |
| 216 - 960 | 3.0 | 200 | 46.0 |
| Above 960 | 3.0 | 500 | 53.9 |

In the emission table above, the tighter limit applies at the band edges.

The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector. Radiated emission limits in the above bands are based on measurements employing an average detector.

Test results - Complied with requirement.

Calculation method

The Correction Factors and RESULT are calculated as followings.

Correction Factor [dB/m] = FACTOR [dB/m] + LOSS [dB] – GAIN [dB]

RESULT [dBuV/m] =READING [dBuV] + Correction Factor [dB/m]

Sample calculation at 62.611 MHz, vertical result as follow:

Result [dBuV/m] = Reading + C.F = 41.9 + 6.4 + 7.4 - 29.7 = 26.0 Margin = Limit - Result = 40.0 - 26.0 = 14.0 [dB]

Tested Date: June 6, 2011

Temperature: 22 °C Humidity: 63 % Atmos. Press: 1007 hPa

Operating mode: Continuous Receiving (2401MHz,: Worst configuration) EUT position: Y-plane (Maximum position)

Measurement distance: 3 m

| No | Frequency | Reading | C.Fac | Result | Limit | Margin | Antenna |
|----|-----------|---------|-------|--------|--------|--------|---------|
| | MHz | dBuV | dB | dBuV/m | dBuV/m | dB | |
| 1 | 4801.564 | 44.0 | 1.5 | 45.5 | 53.9 | 8.4 | Hori. |

Calculation method

The Correction Factors and RESULT are calculated as followings.

Correction Factor [dB/m] = Antenna Factor [dB/m] + Cable loss [dB] – GAIN [dB]

RESULT [dBuV/m] =READING [dBuV] + Correction Factor [dB/m]

Sample calculation at 4801.564 MHz, horizontal, result as follow:

Result [dBuV/m] = Reading + C.F = 44.0 + 1.5 = 45.5 Margin = Limit - Result = 53.9 - 45.5 = 8.4 [dB]

2.10 Receiver AC power line conducted emissions

Test setup

Test setup was implemented according to the method of ANSI C63.4: 2003 clause 6 "General requirements for EUT equipment arrangements and operation" and Annex H.1 "AC power line conducted emission measurements setup".

Test procedure

Measurement procedures were implemented according to the method of ANSI C63.4: 2003 clauses 7, clause 13.1.3 and Annex H.2 "AC power line conducted emission measurements".

Exploratory measurements were used the spectrum analyzer to identify the frequency of the emission that has the highest amplitude relative to the limit by operating the EUT in a range of typical modes of operation, cable positions, and with a typical system equipment configuration and arrangement.

Final ac power line conducted emission measurements were performed based on the exploratory tests. The EUT cable configuration and arrangement and mode of operation that produced the emission with the highest amplitude relative to the limit are selected for the final measurement.

When the measurement value is grater than average limitation the average detection measurements were performed.

Applicable rule and limitation

§15.107 (a) AC power line conducted limits

| Frequency of Emission (MHz) | Conducted L | Limit (dBuV) |
|-----------------------------|-------------|--------------|
| Frequency of Emission (WHZ) | Quasi-peak | Average |
| 0.15-0.5 | 66 to 56 * | 56 to 46 * |
| 0.5-5 | 56 | 46 |
| 5-30 | 60 | 50 |

* Decreases with the logarithm of the frequency.

The lower limit applies at the band edges.
