

1.2. Operational Description

The EUT is a wireless Projector with 1 channel. The device has the data speed of 11 Mbps (IEEE 802.11b) and 54 Mbps (IEEE 802.11g). The carrier uses direct sequence spread spectrum modulation. The diversity antenna is connected through the connector.

The Projector complies with IEEE 802.11b and 802.11g. The data to be displayed is obtained before reaching the display device through the software (can be regarded as a desktop mirror), and then is transferred through the wireless network to the built-in wireless processing board inside the projector after being compressed.
