9. RF EXPOSURE EVALUATION

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b) LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Frequency Range	Electric Field	Magnetic Field	Power Density	Awaraga Tima	
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm^2)	Average Time	
(A) Limits for Occupational / Control Exposures					
300-1,500			F/300	6	
1,500-100,000			5	6	
(B) Limits for General Population / Uncontrol Exposures					
300-1,500			F/1500	6	
1,500-100,000			1	30	

9.1 FRIIS FORMULA

Friis transmission formula : $Pd = (Pout*G)/(4*pi*r^2)$

Where

 $Pd = power density in mW/cm^2$

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd id the limit of MPE, 1 mW/cm2. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

9.2 EUT OPERATING CONDITION

A software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

9.3 TEST RESULT OF RF EXPOSURE EVALUATION

: Wireless ADSL Router Product Test Item : RF Exposure Evaluation Data

Test Mode: Normal Operation

9.3.1 ANTENNA GAIN

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 2dBi linear scale.

9.3.2 OUTPUT POWER INTO ANTENNA & RF EXPOSURE **EVALUATION DISTANCE**

Channal	Channel Frequency (MHz)	Output Power to Antenna	Minimum Allowable
Channel	Chaimer Frequency (MHZ)	(dBm)	Distance ® From Skin(cm)
CH1	2412.00	16.5	2.373532
СН6	2437.00	16.4	2.346362
CH11	2462.00	16.5	2.401016

The distance r (4th column) calculated from the Friis transmission formula is far shorter than 20cm separation requirement. So, RF exposure limit warning or SAR test are not required.
