

1.1. Operation Description

The EUT is a direct sequence modulated 2.4 GHZ transceiver. With 11 bits spreading code. The EUT is built in a PCMCIA card designed to need IEEE 802.11 wireless lan standard. There are 11 channels which can be selected by software. The transmission of EUT can be 1 Mbit/s, 2 Mbit/s, 5.5Mbit/s and 11 Mbit/s. The operation frequency is from 2.4GHZ to 2.485GHZ.
