**Overall Evaluation of Symbol MC9000  
FCC id: H9P2164381**

This application is for a permissive change to the above Bluetooth Module to permit its use within the MC9000 housing.

The supporting data was derived when testing the "Fully equipped" version which includes an RLAN transmitter as well as the above Bluetooth device. This version was approved as a composite device under FCC id: H9PMC9060B.

The Client have declared the housing and Bluetooth module included in this application is the same.

I am satisfied the results obtained in the fully equipped version are representative of the results for this single radio version.

Yours sincerely

Hilton Carr  
Task Manager, Certification and Technical Development
