Question 1

The latest reply indicates the Micropaq antenna configuration is for a medical monitor type of product. This is quite different than the photos submitted earlier (in October 2000), which indicated the Micropaq is a small terminal worn in front of a person's chest; please clarify and address the Micropaq issues in the previous correspondence.

Answer:

The Micropaq antenna installed in the Micropaq terminal by Protocol Systems is a neck worn medical monitoring device. The picture shows the Micropaq terminal hung around the patient's neck. He is wearing a hospital gown. The issues were addressed in response 17394 uploaded as an RF Exhibit. If necessary I will reload that exhibit.
