

The Symbol LA-3021-100-US radio  
Shown inside the housing in which it was tested

The module is permanently mounted on the outside of the truck and away from the driver or other occupants as instructed in the installation manual for this model.

Additional circuitry is located on the same PCB as the PCMCIA connector for the radio. This additional functionality provides for the following;

- Clean +5V power to the radio module
- Analog to Digital conversion for external analog inputs
- Signal conditioning for the external analog inputs

Only the +5V power supply is associated with the operation of the radio.
