I have emailed a request to Bette Taube to change the 731 13(a) to yes, 13(c) to filed at same time, and FCC ID to H9PLA3021-100. I have also uploaded the DOC to the FCC web site, and mailed in another 159 form with the EBC fees.

>2) The MMCX antenna connector is not unique. A search on the internet shows that it is >available to anyone. Therefore, it is not in compliance with Section 15.203. Please >correct/explain accordingly.

This connector is not available through retail distributors and requires special tools, knowledge, and assembly techniques that are not available to the general public. This connector has been approved for our H9PLA3020 radio (see correspondence # 3413) as well as many of our competitor's products. All of our antennas either have the MMCX connector and cable assembly permanently attached to the antenna (internal antennas) or the antenna is terminated in a reverse polarity BNC that requires a special adapter cable that is RP-BNC to MMCX (see attached drawing).

>

The receiver input bandwidth is 1 MHz.

>4) Provide a list of all of the antennas. Indicate the output power, antenna type with model >number and the antenna gain.

As stated in #2 above, all cables are permanently affixed to the antennas with either a reverse polarity BNC or a MMCX connector on the free end. In general the antennas that are internal to hand held devices are MMCX and the portable antennas are RP-BNC. The list of antennas is attached.

>5) Please correct the label.

>as soon as possible.

The file LA3021-100 Label Rev2.pdf was uploaded in response to correspondence # 8956 > >6) FYI only, The RF safety calculations are under review. Any questions will be forwarded to you

I hope these answers are satisfactory.

Respectfully,

Norman H. Nelson

Antenna Summary Table

Non Hand Held Antennas

19	Ceiling Mount Panel	Plane	3.6 dBi	Ceiling	8.0 cm	ML-2499-SD24-06		
21	Mag Mount	Dipole	-3 dBi	Vehicle	6.6 cm	ML-2499-MGA1-01		

¹ Antenna gain includes permanently attached cable loss. ² MPE Distance is based on Symbol's worst case 350 mW H9PLA3021-500 for all antennas ³ All cables are permanently attached to the antenna with a reverse polarity BNC on the other end. A short MMCX to RP-BNC cable is required for mating to PC Card.
